1.0 Analytical Data Quality Summary

This Data Validation Report documents the sample collection and data validation results for the surface water and stormwater samples collected in support of the ongoing Remedial Investigation (RI) for Accelerated Operable Unit 1 (AOU-1) at the 700 South 1600 East Tetrachloroethene (PCE) Plume Site, Salt Lake City, Utah. This work was performed by EA Engineering, Science, and Technology, Inc, PBC (EA) for the Department of Veterans Affairs (VA). Sampling procedures and overall quality assurance (QA) and quality control (QC) protocols associated with the sampling and analyses are presented in the RI Work Plan (First Environment, Inc. [FE] 2015) and Quality Assurance Project Plan (QAPP) Update Revision 1 (EA Engineering, Science, and Technology, Inc., PBC [EA] 2016).

1.1 Sample Collection and Analytical Protocol

Collection of surface water samples from identified and accessible seeps, springs, sumps, and Red Butte Creek within AOU-1 was performed to assess the lateral extent of PCE contamination. Several of the springs discharge to the municipal stormwater conveyance system. Therefore, water samples were collected from selected Salt Lake City stormwater sewer manholes, located in and downgradient of AOU-1, to determine if groundwater seepage and discharge from foundation drains is impacting stormwater lines. Stormwater sample locations consisted of mitigated spring water storm drains, stormwater lines, and the Jordan and Salt Lake City Canal. Surface water and stormwater were collected from 26 February to 11 May 2016.

Surface water samples were collected in accordance with the QAPP Update Revision 1, Attachment 2 Standard Operating Procedures (SOP) Compendium, using a peristaltic pump with three-eighths inch diameter polyethylene tubing, or as a grab sample by filling containers directly, or, if seep discharge was low, with a decontaminated stainless steel sampling syringe. Stormwater samples were collected at least 24 hours after any precipitation. Stormwater samples were also collected using a peristaltic pump with three-eighths inch diameter polyethylene tubing.

Surface water and stormwater samples for laboratory analysis were collected in certified clean containers in accordance with U.S. Environmental Protection Agency (EPA) specifications with appropriate preservative and stored on ice for transport to the laboratory. Sample chain-of-custody was recorded using the EPA SCRIBE® system for sample management and tracking. Surface water and stormwater samples were sent to EPA designated Contract Laboratory Program (CLP) laboratory (Chemtech Consulting Group [Chemtech]) for analysis of volatile organic compounds (VOCs) in accordance with CLP method protocol. Samples from a random subset (20 percent) of these locations were analyzed for semivolatile organic compounds (SVOCs), target analyte list metals (TAL) total metals, total dissolved solids (TDS), and anions at the EPA CLP laboratory and the EPA Region 8 laboratory. Ten percent confirmation splits of the surface water and stormwater samples were collected and shipped to two different CLP laboratories (Shealy Environmental Services [Shealy] and Bonner Analytical Testing Company [Bonner]) to be analyzed for VOCs, SVOCs, and TAL total metals for independent QA. In addition, two surface water samples were collected for hydrogen and oxygen isotope ratio analysis at the Stable Isotope Ratio Facility for Environmental Research located at University of Utah. Due to malfunction of the storage refrigerator it was determined the remainder of the surface water samples pending isotope analysis should be disposed of and not analyzed. Isotope sample data were verified by the University of Utah lab prior to finalizing the data and not identified for third party data validation based on the unique type of data set. Isotope data will be evaluated as part of OU-2 groundwater investigation and is not included in this report.

Samples were analyzed in accordance with the CLP Statement of Work (SOW) for organic and inorganic methods (EPA 2015a,b) and EPA analytical methods as indicated below.

- *VOCs*—EPA CLP SOM02.3 (EPA 2015a)
- *SVOCs*—EPA CLP SOM02.3 (EPA 2015a)
- *TAL Metals*—EPA CLP ISM02.3 (EPA 2015b)
- *Anions (chloride, sulfate, nitrate/nitrite nitrogen)*—EPA 300.0 (EPA 1993)
- *TDS*—EPA 160.1 (EPA 1983)

A summary of the surface water and stormwater sampling and associated analyses is included in Table 1-1. Sample results are contained in 11 sample delivery groups (SDGs) as noted below.

- Chemtech (VOCs, SVOCs, TAL metals)—SDGs H0001, H4002, H4010, H4023, H4104, MH4002, MH4005
- EPA Region 8 laboratory (anions and TDS)—SDGs C160505, C160506
- Shealy (VOCs, SVOCs)—SDG H4001
- Bonner (TAL metals)—SDG MH4213

1.2 Data Validation Protocol

A Tier 2B data validation was performed on 100 percent and Tier 4 data validation was performed on 10 percent of the VOC, SVOC and metals analytical data. Validation was performed by a third-party subcontractor, Environmental Data Services, Newport News, Virginia, in accordance with the guidelines and control criteria specified in the following documents. The analytical data provided by the EPA Region 8 lab (anions and TDS) underwent a quality assessment by the EPA lab prior to submission to VA. Surface water quality data collected during the 2016 investigation may be used in conjunction with the OU-2 groundwater investigation (which also includes AOU-1 groundwater). Validated sample data are presented in Tables 1-2 and 1-3. Data validation was performed based on the following documents:

- RI Work Plan/ Sampling and Analysis Plan (FE 2015)
- QAPP (EA 2016)
- EPA National Functional Guidelines for Superfund Organic Methods Data Review (EPA 2014a)
- EPA National Functional Guidelines for Inorganic Superfund Data Review (EPA 2014b).

The validation included review of the following data quality indicator criteria:

- Chain of custody documentation
- Sample extraction and analysis holding time compliance
- Collection of required field QC samples
- Review of QC summaries and case narrative regarding sample analysis and control criteria
- Review of method blank and field QC blank samples
- Review of instrument calibration performance and other method-specific criteria as defined in the QAPP (EA 2016)

- Laboratory control sample (LCS) and LCS duplicate (LCSD) samples and other method-specific analytical spike data (applicable to metals only)
- Surrogate spike recoveries for organic analyses
- Matrix spike (MS) and matrix spike duplicate (MSD) sample recoveries
- Field duplicate sample relative percent difference (RPD)
- For Tier 4 validation, system performance and analyte quantitation
- Review of laboratory detection limits to verify conformance with project data objectives and screening criteria
- Review of the data and deliverables for completeness.

Analytical data were reviewed to evaluate precision, accuracy, representativeness, comparability, completeness, and sensitivity as defined below. Acceptance criteria for evaluation of precision and accuracy are compared with the acceptance criteria defined in the QAPP EA (2016) and EPA validation guidelines (EPA 2014a,b).

- *Accuracy* is demonstrated by percent recovery of target analytes from fortified blank and sample matrices, LCS/LCSD, and MS/MSD, respectively. For organic methods, bias is also demonstrated through recovery of surrogates from each field and QC sample. A comparison was made from the recovery of target analytes from fortified samples to the acceptance criteria defined in the QAPP (EA (2016). When these criteria are not met, the data are qualified accordingly.

- *Precision* is expressed as the RPD between the results of replicate sample analyses: sample duplicates, LCSDs, and MSDs. When analyte RPDs exceed the acceptance criteria, the data are qualified accordingly.

- *Representativeness* of the samples submitted for analysis is ensured by adherence to standard sampling techniques and standard analytical method protocols.

- *Comparability* of sample results is ensured through the use of approved sampling and analysis methods and protocols, and reporting of standard units of measure.

- *Completeness* is expressed as a percentage of the ratio of the number of usable data results to the total number of analytical data results. Only rejected data (R-qualified) are considered not usable to achieve project objectives. The completeness goal for the surface water and stormwater sampling is 90 percent data completeness.

- *Sensitivity* is determined by the ability to achieve the established method-specific reporting limits in accordance with the QAPP (EA 2016). For this project, the laboratory reported positive results to the method detection limit (MDL), and results between the MDL and the contract required quantitation limit (CRQL) were flagged with a J-qualifier and reported as estimated data.

Data flags were assigned according to the QC acceptance limits defined in the QAPP (EA 2016). The data validation flags for each SDG are summarized in each individual data validation report (Attachment 1). These flags, and the reason for each flag, are maintained in the project database. Multiple flags may be applied to a specific sample method/matrix/analyte; however, the final flag presented with the data values is based on the most conservative of the validation flags.

The data flags are defined in the QAPP (EA 2016) as follows:

J = Analyte was present but the reported value is estimated.

UJ = Analyte was not detected above the MDL. However, the reported detection limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

R = Result has been rejected and data do not meet the project objectives.

U = Analyte was analyzed for but not detected above the MDL.

1.3 Accuracy, Precision and Representativeness of Data

Data validation results are presented in the data validation summary reports in Attachment 1 and summarized below. The surface water and stormwater sample analytical data reports are included in Attachment 2.

1.3.1 Chain-of-Custody and Sample Receipt

Fifty water samples and associated field QC samples were received at Chemtech, EPA laboratory, Shealy and Bonner during the period of 27 February through 12 May 2016 (Table 1-1). The samples were received in appropriate containers, properly preserved, and sample cooler temperatures were within the EPA guideline of 4 degrees Celsius (ºC), (± 2°C). Appropriate signatures were included on the chain-of-custody documentation. Sample receipt condition is documented in the analytical data reports. Any sample receipt clarifications were provided to the laboratories by the EPA sample coordinator.

1.3.2 Sample Extraction and Analysis Holding Times

Sample holding times were evaluated by comparing the sample collection dates to the sample extraction and analysis dates. Extraction and analysis holding times were reviewed for the water samples to determine compliance with EPA recommended holding times. Holding time requirements were met for method-specific extraction and analysis for all project samples.

1.3.3 Blank Data Results

Blank sample data were evaluated in accordance with the criteria established in the QAPP (EA 2016) and National Functional Guidelines (EPA 2014b,c). Detections of target analytes greater than one-half the CRQL and greater than the CRQL for common lab contaminants (i.e., methylene chloride, toluene, and acetone) resulted in data qualification depending on the analyte concentration in the associated samples. Associated samples are those samples contained in the same batch or sample group as the method blank, calibration blank or field QC blank sample.

- Low-level detections of the laboratory contaminant methylene chloride in method blank samples resulted in U-qualification (non-detect result) of low-level methylene chloride detections in the samples associated with the method blank sample.

- Low-level detections of chloroform in trip blanks and chloroform, bromodichloromethane and dibromochloromethane in field blank samples resulted in U-qualification (non-detect result) of the same analyte detections reported in samples associated with the trip and field blanks.

- Low-level detections of chromium in method blank samples and aluminum, antimony, silver, nickel and copper in continuing calibration blanks for metals analysis resulted in U-qualification (non-detect results) of the same analyte detections reported in samples associated with the method blank and calibration blanks.

1.3.4 Surrogate and Internal Standard Recoveries

Surrogate and internal standards are organic compounds added to field and laboratory QC samples for organic analysis to evaluate matrix effect and method performance on an individual sample basis. Exceedance of QC limits for surrogate and internal standard recoveries result in data qualification of various VOC and SVOC analytes that are associated with the specific surrogate or internal standard compound based on similarity in chemical composition. Analytes can be either J- or UJ-qualified based on whether they are detected results or non-detect results. Non-detect results will be UJ-qualified, signifying estimated non-detect values; detections will be J-qualified, signifying estimated values.

- VOC surrogate recovery for 1,1-dichloroethene-d2 was below the control limit for samples SW-008-D, SW-018-D, SW-050 and TB-010. Associated compounds were J- and UJ-qualified signifying estimated detect and non-detect data.

- SVOC surrogate recovery for 1,4-dioxane-d8 was below the control limit for samples SW-007, SW-007-D, SW-012, SW-021, SW-023, SW-026, SW-027, and SW-028. Associated compounds were UJ-qualified signifying estimated non-detect data.

- SVOC surrogate recovery for 4-nitrophenol-d4 was below 10 percent for samples SW-012, SW-026, SW-027 and SW-028. Associated non-detect compounds were R-qualified signifying rejected data.

All other sample surrogate and internal standard recoveries were within the method control criteria.

1.3.5 Laboratory Control Sample Recoveries and Precision Results

The LCS is an aliquot of analyte-free matrix, spiked with target analytes that is prepared with each analytical batch for the inorganic analytical methods. The recovery of target analytes from the LCS analysis is a measurement of sample preparation and method performance in an interference-free sample matrix. LCS sample recoveries and precision were within the method control criteria for the ISM02.2 metals analysis. LCS is not included with the CLP VOC and SVOC analysis methods.

1.3.6 Matrix Spike Sample Recoveries and Precision Results

The MS and MSD samples are a portion of a field sample spiked with target analytes and prepared with each analytical method for soil and water methods. The MS and MSD results are used to evaluate potential bias introduced to the method due to matrix interference and to measure bias and precision for each analytical batch. MS/MSD samples were analyzed with the project samples per the QAPP requirement (MS/MSD per 20 field samples) (EA 2016). MS/MSD spike recoveries were within control limits for VOCs, SVOCs and metals.

1.3.7 Field Duplicate Samples

Five field duplicate samples were collected and analyzed with the project samples per the QAPP requirement (1 per 10 field samples) (EA 2016). Field duplicate results were evaluated based on the RPD of 40 percent for VOCs and SVOCs and 30 percent for TAL metals and other inorganics as specified in the QAPP (EA 2016), for detected concentrations greater than the reporting limit. Field duplicate results were within the acceptable criteria for all analytes.

1.3.8 Instrument Calibration Performance

Instrument calibration and continuing calibration performance are reviewed to ensure that the calibration of target analytes meets the method-specific and project-established percent recovery and relative standard deviation criteria. Instrument calibration performance was met for all analyses with the following continuing calibration verification exceptions:

- The percent difference for the relative response factor for benzylbutylphthalate exceeded the control limit. Non-detect sample results for benzylbutylphthalate associated with this analytical run and calibration were UJ-qualified.
- The percent difference for the relative response factor for hexachlorocyclopentadiene exceeded the control limit. Non-detect sample results for hexachlorocyclopentadiene associated with this analytical run and calibration were UJ-qualified.

1.3.9 Inductively-Coupled Plasma Serial Dilution

Inductively-coupled plasma (ICP) serial dilution criteria for metals analysis were met for all analytes with the exception of aluminum, copper, iron, vanadium and zinc. Associated sample detections in the same analytical batch with the serial dilution that exceeded the criteria were J-qualified, as estimated data values.

1.3.10 System Performance and Analyte Quantitation

The system performance and analyte quantitation were reviewed for the Tier 4 validation. Instrument sensitivity, performance, instrument output and response data were reviewed and deemed acceptable for all methods. In addition, target compound identification and sample quantitation were reviewed for all methods and determined to be accurate.

1.4 Data Representativeness

Surface water and stormwater sample collection was conducted in accordance with the sampling and analysis protocols and SOP 019 documented in the QAPP Update Revision 1. Approved procedures were used to collect, preserve, document, and ship samples to the CLP and EPA Region 8 laboratories for analysis, thus ensuring the samples were representative of the project site and conditions. Samples were analyzed using EPA CLP and EPA standard methodologies to ensure representativeness of the data results.

1.5 Data Comparability

Comparability of data is achieved through the use of industry standard analytical method protocols, approved sampling and analysis protocols, use of standard units of measure, and conformance to project-required reporting limits to achieve data quality objectives. Data verification indicates that project-specific methods and reporting limits were used for analysis of the AOU-1 project samples in accordance with the QAPP (EA 2016) with exception of the CLP SOW organic and inorganic methods. The more current version of this CLP SOW methods SOM02.3 and ISM02.3 were used for the VOC, SVOC and metals analyses with no impact to data usability.

1.6 Data Sensitivity

Appropriate EPA CLP analytical methods were used for the sample analyses to achieve the required reporting limits and project-specific screening criteria per the QAPP (EA 2016) for VOCs, SVOCs, metals and general chemistry parameters with exceptions as previously noted in the QAPP – Tables 9, 10, 11 and 12 – Project Laboratory – Target Analytes and Quantitation Limits for VOCs, SVOCs, metals and general chemistry parameters in water, respectively. Reporting limits for the site-specific preliminary contaminants of potential concern were below the project screening levels.

- Project screening level—Screening levels taken from tables 9, 10, 11 and 12 of the QAPP (EA 2016); derived from the groundwater screening values that have been increased by a factor of ten to account for reduced exposures to surface water.

1.7 Independent Laboratory Quality Assurance Assessment

Five surface water/ stormwater samples were analyzed at Shealy for VOCs and/or SVOCs and at Bonner for TAL metals. Data results were compared to the results generated by Chemtech in support of an independent CLP laboratory QA assessment for the sampling event. For comparison purposes, the same RPD criteria for organics and metals used for assessing field duplicate sample precision was used for the independent QA sample precision assessment since no criteria was specified in the QAPP Update Revision 1. No data were qualified based on the evaluation of the independent QA laboratory analyses. In summary, the RPDs for all detected VOCs were within the 40 percent criteria. No SVOC detections were reported in the sample data. The RPDs for TAL metals that exceed the 30 percent criteria include aluminum, cadmium, cobalt, iron, lead, manganese, nickel, selenium, and zinc. The RPD exceedances for metals may be attributed to the sample matrix and suspended particulate matter in the samples. Analytical results and RPDs are presented on table 1-4.

1.8 Data Completeness

Project deliverables were reviewed for accuracy and completeness and compared to the QAPP requirements (EA 2016). The laboratory data deliverables were verified to ensure the required elements were included the data package. The following discrepancies were noted between the project plans, the samples submitted to the CLP laboratory and the data reporting.

- The CLP laboratories ran the most current CLP SOW SOM02.3 and ISM02.3 for the organic analyses (VOCs and SVOCs) and metals analysis rather than the ISM02.2 stated in the QAPP (EA 2016). This had no impact to data usability.

- The data validation was conducted using the 2014 National Functional Guidelines (EPA 2014b,c rather than the 2013 guidelines as indicted in the QAPP (EA 2016). The third-party validation subcontractor used the most current version to validate the data since the more current CLP SOW methods were used for analysis. This had no impact to assessing data quality indicator criteria and documenting the data usability.Five SVOC analytes (2,4-dninitrophenol, 2-nitroaniline, 3-nitroaniline, 4-nitroaniline and 4-nitrophenol) in four samples were R-qualified signifying rejected and not usable data. A data completeness for the SVOC analysis was still greater than the 90 percent completeness goal at 97.3 percent.
- Due to malfunction of refrigerator where the surface water samples were being stored pending future isotope analysis, additional surface water samples could not be analyzed for isotopes. Additional isotope sampling is planned as part of the OU-2 groundwater investigation.

Aside from these noted discrepancies, all data are usable to achieve project data quality objectives (DQOs). The data completeness for the surface water and stormwater sample data is 99.5 percent.

1.9 Conclusions

The analytical data reported for this project have been reviewed for accuracy, precision, representativeness, comparability, sensitivity and completeness. QC criteria exceedances for the AOU-1 project analytical data resulting in data qualification include 1) low-level detections of VOCs and metals in method, trip, field and calibration blank samples, 2) VOC and SVOC surrogate spike recoveries outside of limits, 3) SVOC analysis instrument calibration relative response factor exceedance of criteria, and 4) exceedance of the ICP serial dilution criterion for metals.

The affected sample data were J- and UJ-qualified as estimated detect or non-detect concentrations, R-qualified signifying rejected data and U-qualified as non-detect concentrations. Estimated data are still usable to achieve project DQOs. The analytical data generated in support of the AOU-1 RI meet project DQOs as qualified and are usable for the intended purpose.

A Stage 2B/4 validation was performed on the analytical data for thirteen water samples and three aqueous trip blank samples collected February 22-26, 2016 by EA Engineering at the Veterans Administration site in Salt Lake City, Utah. The samples were analyzed under the Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) Multi-Media Multi-Concentration Organic Analysis SOM02.3.

Specific method references are as follows:

Analysis	*Method References*
Trace VOCs	USEPA CLP SOM02.3
SVOCs	USEPA CLP SOM02.3

The data have been validated according to the protocols and quality control (QC) requirements of the analytical methods, the Quality Assurance Project Plan (QAPP) 700 South 1600 East PCE Plume AOU-1: East Side Springs, Salt Lake City, Rev. 1, February 2016 and the USEPA National Functional Guidelines for Organic Data Review as follows:

- The USEPA "Contract Laboratories Program National Functional Guidelines for Superfund Organic Methods Data Review," August 2014;
- and the reviewer's professional judgment.

The following data quality indicators were reviewed for this report:

- Gas Chromatography/Mass Spectrometry (GC/MS) Tuning
- Initial and continuing calibration summaries
- Method blank and field QC blank contamination
- Surrogate Spike recoveries
- Matrix Spike/Matrix Spike Duplicate (MS/MSD) recoveries
- Laboratory Control Sample (LCS) recoveries
- Internal standard area and retention time summary forms
- Target Compound Identification
- Compound Quantitation
- Tentatively Identified Compounds (TICs)
- Field Duplicate sample precision
- System Performance
- Regional Quality Assurance and Quality Control
- Overall Assessment of Data

Data Usability Assessment

There were minor rejections of data. This data cannot be used in the decision-making process for this project.

- Ten SVOC compounds were rejected in one sample due to severely low surrogate recoveries.

Overall the remaining data are acceptable for the intended purposes as qualified for the deficiencies detailed in this report.

Please note that any results qualified (U) due to blank contamination may be then qualified (J) due to another action. Therefore, the results may be qualified (UJ) due to the culmination of the blank contaminations and actions from other exceedences of QC criteria.

A Stage 2B/4 validation was performed on the analytical data for five water samples, one aqueous field blank sample, and one aqueous trip blank sample collected May 3-4, 2016 by EA Engineering at the Veterans Administration site in Salt Lake City, Utah. The samples were analyzed under the Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) Multi-Media Multi-Concentration Organic Analysis SOM02.3.

Specific method references are as follows:

Analysis	*Method References*
Trace VOCs	USEPA CLP SOM02.3
SVOCs	USEPA CLP SOM02.3

The data have been validated according to the protocols and quality control (QC) requirements of the analytical methods, the Quality Assurance Project Plan (QAPP) 700 South 1600 East PCE Plume AOU-1: East Side Springs, Salt Lake City, Rev. 1, February 2016 and the USEPA National Functional Guidelines for Organic Data Review as follows:

- The USEPA "Contract Laboratories Program National Functional Guidelines for Superfund Organic Methods Data Review," August 2014;

- and the reviewer's professional judgment.

The following data quality indicators were reviewed for this report:

Organics

- Holding times and sample preservation
- Gas Chromatography/Mass Spectrometry (GC/MS) Tuning
- Initial and continuing calibration summaries
- Method blank and field QC blank contamination
- Surrogate Spike recoveries
- Matrix Spike/Matrix Spike Duplicate (MS/MSD) recoveries
- Laboratory Control Sample (LCS) recoveries
- Internal standard area and retention time summary forms
- Target Compound Identification
- Compound Quantitation
- Tentatively Identified Compounds (TICs)
- Field Duplicate sample precision
- System Performance
- Regional Quality Assurance and Quality Control
- Overall Assessment of Data

Data Usability Assessment

There were no rejections of data.

Overall the data are acceptable for the intended purposes as qualified for the deficiencies detailed in this report.

Please note that any results qualified (U) due to blank contamination may be then qualified (J) due to another action. Therefore, the results may be qualified (UJ) due to the culmination of the blank contaminations and actions from other exceedences of QC criteria.

Volatile Organic Compounds (VOC)

Holding Times

- All samples were analyzed within 14 days for preserved water samples.

GC/MS Tuning

- All criteria were met.

Initial Calibration

- All percent relative standard deviation (%RSD) and mean relative response factor (RRF) criteria were met.

Continuing Calibration

- All percent difference (%D) and RRF criteria were met.

Method Blank

- The method blanks were free of contamination.

Field QC Blank

- Field QC results are summarized below.

Blank ID	Compound	Conc. ug/L	Qualifier	Affected Samples
A-FB-002	None - ND	-	-	-

* - VOC only

A Stage 2B/4 validation was performed on the analytical data for twelve water samples, two soil samples, and one aqueous trip blank sample collected May 2-3, 2016 by EA Engineering at the Veterans Administration site in Salt Lake City, Utah. The samples were analyzed under the Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) Multi-Media Multi-Concentration Organic Analysis SOM02.3.

Specific method references are as follows:

Analysis	*Method References*
Trace VOCs/ Low Level VOCs	USEPA CLP SOM02.3
SVOCs	USEPA CLP SOM02.3

The data have been validated according to the protocols and quality control (QC) requirements of the analytical methods, the Quality Assurance Project Plan (QAPP) 700 South 1600 East PCE Plume AOU-1: East Side Springs, Salt Lake City, Rev. 1, February 2016 and the USEPA National Functional Guidelines for Organic Data Review as follows:

- The USEPA "Contract Laboratories Program National Functional Guidelines for Superfund Organic Methods Data Review," August 2014;
- and the reviewer's professional judgment.

The following data quality indicators were reviewed for this report:

Organics

- Holding times and sample preservation
- Gas Chromatography/Mass Spectrometry (GC/MS) Tuning
- Initial and continuing calibration summaries
- Method blank and field QC blank contamination
- Surrogate Spike recoveries
- Matrix Spike/Matrix Spike Duplicate (MS/MSD) recoveries
- Laboratory Control Sample (LCS) recoveries
- Internal standard area and retention time summary forms
- Target Compound Identification
- Compound Quantitation
- Tentatively Identified Compounds (TICs)
- Field Duplicate sample precision
- System Performance
- Regional Quality Assurance and Quality Control
- Overall Assessment of Data

Data Usability Assessment

There were minor rejections of data. This data cannot be used in the decision-making process for this project.

- Five SVOC compounds were rejected in four samples due to severely low surrogate recoveries.

Overall the remaining data are acceptable for the intended purposes as qualified for the deficiencies detailed in this report.

Please note that any results qualified (U) due to blank contamination may be then qualified (J) due to another action. Therefore, the results may be qualified (UJ) due to the culmination of the blank contaminations and actions from other exceedences of QC criteria.

Volatile Organic Compounds (VOC)

Holding Times

- All samples were analyzed within 14 days for preserved water samples and soil samples.

GC/MS Tuning

- All criteria were met.

- All mass spectra and quantitation criteria were met.

Compound Quantitation

- EDS Sample ID #s 1, 5, 6, 7, 18, and 19 exhibited high concentrations of tetrachloroethene and were flagged (E) by the laboratory. The samples were reanalyzed at a 5X dilution and the dilution results for tetrachloroethene should be used for reporting purposes.
- EDS Sample ID #8 was reanalyzed due to carryover and the reanalysis results should be used for reporting purposes.

Tentatively Identified Compounds (TICs)

- All TICs were qualified estimated (J) for unknown compounds and (NJ) for tentatively identified compounds.

Field Duplicate Sample Precision

- Field duplicate samples were not collected.

System Performance

- Instrument sensitivity and chromatographic performance were acceptable. Degradation of the system performance was not found. Instrument output and response data were reviewed and found to be acceptable.

Regional Quality Assurance and Quality Control

- All criteria were met. PE samples were not included with this project.

* - VOC only

A Stage 2B/4 validation was performed on the analytical data for seventeen water samples, one aqueous field blank sample and two aqueous trip blank samples collected February 22-26, 2016 by EA Engineering at the Veterans Administration site in Salt Lake City, Utah. The samples were

analyzed under the Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) Multi-Media Multi-Concentration Organic Analysis SOM02.3.

Specific method references are as follows:

Analysis	*Method References*
Trace VOCs	USEPA CLP SOM02.3
SVOCs	USEPA CLP SOM02.3

The data have been validated according to the protocols and quality control (QC) requirements of the analytical methods, the Quality Assurance Project Plan (QAPP) 700 South 1600 East PCE Plume AOU-1: East Side Springs, Salt Lake City, Rev. 1, February 2016 and the USEPA National Functional Guidelines for Organic Data Review as follows:

- The USEPA "Contract Laboratories Program National Functional Guidelines for Superfund Organic Methods Data Review," August 2014;
- and the reviewer's professional judgment.

The following data quality indicators were reviewed for this report:

Organics

- Holding times and sample preservation

Data Usability Assessment

There were no rejections of data.

Overall the data are acceptable for the intended purposes as qualified for the deficiencies detailed in this report.

Please note that any results qualified (U) due to blank contamination may be then qualified (J) due to another action. Therefore, the results may be qualified (UJ) due to the culmination of the blank contaminations and actions from other exceedences of QC criteria.

A Stage 2B/4 validation was performed on the analytical data for eight water, one aqueous field blank sample, and one aqueous trip blank sample collected May 9-11, 2016 by EA Engineering at the Veterans Administration site in Salt Lake City, Utah. The samples were analyzed under the Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) Multi-Media Multi-Concentration Organic Analysis SOM02.3.

Specific method references are as follows:

Analysis	*Method References*
Trace VOCs	USEPA CLP SOM02.3

The data have been validated according to the protocols and quality control (QC) requirements of the analytical methods, the Quality Assurance Project Plan (QAPP) 700 South 1600 East PCE Plume AOU-1: East Side Springs, Salt Lake City, Rev. 1, February 2016 and the USEPA National Functional Guidelines for Organic Data Review as follows:

- The USEPA "Contract Laboratories Program National Functional Guidelines for Superfund Organic Methods Data Review," August 2014;

- and the reviewer's professional judgment.

The following data quality indicators were reviewed for this report:

Organics

- Holding times and sample preservation
- Gas Chromatography/Mass Spectrometry (GC/MS) Tuning
- Initial and continuing calibration summaries
- Method blank and field QC blank contamination
- Surrogate Spike recoveries
- Matrix Spike/Matrix Spike Duplicate (MS/MSD) recoveries
- Laboratory Control Sample (LCS) recoveries
- Internal standard area and retention time summary forms
- Target Compound Identification
- Compound Quantitation
- Tentatively Identified Compounds (TICs)
- Field Duplicate sample precision
- System Performance
- Regional Quality Assurance and Quality Control
- Overall Assessment of Data

Data Usability Assessment

There were no rejections of data.

Overall the data is acceptable for the intended purposes as qualified for the deficiencies detailed in this report.

Please note that any results qualified (U) due to blank contamination may be then qualified (J) due to another action. Therefore, the results may be qualified (UJ) due to the culmination of the blank contaminations and actions from other exceedences of QC criteria.

Volatile Organic Compounds (VOC)

Holding Times

- All samples were analyzed within 14 days for preserved water samples.

GC/MS Tuning

- All criteria were met.

Initial Calibration

- All percent relative standard deviation (%RSD) and mean relative response factor (RRF) criteria were met.

Continuing Calibration

- All percent difference (%D) and RRF criteria were met.

Method Blank

- The method blanks were free of contamination.

Field QC Blank

- Field QC results are summarized below.

Blank ID	Compound	Conc. ug/L	Qualifier	Affected Samples
A-TB-011	Chloroform	0.93	None	See FB
A-FB-004	Chloroform	21	U	10, 11, 12
	Bromodichloromethane	3.8	U	10
	Dibromochloromethane	0.75	U	10

Surrogate Spike Recoveries

- All samples exhibited acceptable surrogate %R values except for the following.

Sample ID	Surrogate	%R	Qualifier
2	2-Butanone-d5	133%	None - All Associated ND
	Chloroform-d	131%	J+ - Positive Results
3	2-Butanone-d5	131%	None - All ND
4	2-Butanone-d5	131%	None - All ND

Matrix Spike/Matrix Spike Duplicate (MS/MSD) Recoveries

- The MS/MSD samples exhibited acceptable %R and RPD values.

Laboratory Control Samples

- LCS samples were not analyzed.

Internal Standard (IS) Area Performance

- All internal standards met response and retention time (RT) criteria

Target Compound Identification

- All mass spectra and quantitation criteria were met.

Compound Quantitation

- EDS Sample ID #2 exhibited a high concentration of chloroform and was flagged (E) by the laboratory. The sample was reanalyzed at a 5X dilution and the dilution result for chloroform should be used for reporting purposes.
- EDS Sample ID #11 exhibited a high concentration of tetrachloroethene and was flagged (E) by the laboratory. The sample was reanalyzed at a 5X dilution and the dilution result for tetrachloroethene should be used for reporting purposes.

Tentatively Identified Compounds (TICs)

- All TICs were qualified estimated (J) for unknown compounds and (NJ) for tentatively identified compounds.

Field Duplicate Sample Precision

- Field duplicate samples were not collected.

System Performance

- Instrument sensitivity and chromatographic performance were acceptable. Degradation of the system performance was not found. Instrument output and response data were reviewed and found to be acceptable.

Regional Quality Assurance and Quality Control

- All criteria were met. PE samples were not included with this project.

Overall Assessment of Data

- Compound identification and quantitation criteria were met. Calculations and transcription data were verified. No action was required.

Please contact the undersigned at (757) 564-0090 if you have any questions or need further information.

Data Qualifier	Definition
U	The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.
J	The analyte is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
NJ	The analysis has been "tentatively identified" or "presumptively" as present and the associated numerical value is the estimated concentration in the samples.
UJ	The analyte was analyzed for but was not detected. The reported quantitation limits is approximate and may be inaccurate or imprecise.
R	The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the samples.

* - VOC only

A Stage 2B/4 validation was performed on the analytical data for nineteen water samples and one aqueous trip blank sample collected May 4-6, 2016 by EA Engineering at the Veterans Administration site in Salt Lake City, Utah. The samples were analyzed under the Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) Multi-Media Multi-Concentration Organic Analysis SOM02.3.

Specific method references are as follows:

Analysis	*Method References*
Trace VOCs	USEPA CLP SOM02.3
SVOCs	USEPA CLP SOM02.3

The data have been validated according to the protocols and quality control (QC) requirements of the analytical methods, the Quality Assurance Project Plan (QAPP) 700 South 1600 East PCE Plume AOU-1: East Side Springs, Salt Lake City, Rev. 1, February 2016 and the USEPA National Functional Guidelines for Organic Data Review as follows:

- The USEPA "Contract Laboratories Program National Functional Guidelines for Superfund Organic Methods Data Review," August 2014;
- and the reviewer's professional judgment.

The following data quality indicators were reviewed for this report:

Organics

- Holding times and sample preservation
- Gas Chromatography/Mass Spectrometry (GC/MS) Tuning
- Initial and continuing calibration summaries
- Method blank and field QC blank contamination
- Surrogate Spike recoveries
- Matrix Spike/Matrix Spike Duplicate (MS/MSD) recoveries
- Laboratory Control Sample (LCS) recoveries
- Internal standard area and retention time summary forms
- Target Compound Identification
- Compound Quantitation
- Tentatively Identified Compounds (TICs)
- Field Duplicate sample precision
- System Performance
- Regional Quality Assurance and Quality Control
- Overall Assessment of Data

Data Usability Assessment

There were no rejections of data.

Overall the data are acceptable for the intended purposes as qualified for the deficiencies detailed in this report.

Please note that any results qualified (U) due to blank contamination may be then qualified (J) due to another action. Therefore, the results may be qualified (UJ) due to the culmination of the blank contaminations and actions from other exceedences of QC criteria.

Volatile Organic Compounds (VOC)

Holding Times

- All samples were analyzed within 14 days for preserved water samples.

GC/MS Tuning

- All criteria were met.

Initial Calibration

- All percent relative standard deviation (%RSD) and mean relative response factor (RRF) criteria were met.

Continuing Calibration

- All percent difference (%D) and RRF criteria were met.

Method Blank

- The method blanks were free of contamination.

Field QC Blank

- Field QC results are summarized below.

Blank ID	Compound	Conc. ug/L	Qualifier	Affected Samples
A-TB-010	None - ND	-	-	-

Surrogate Spike Recoveries

- All samples exhibited acceptable surrogate %R values except for the following.

Sample ID	Surrogate	%R	Qualifier
12	1,1-Dichloroethene-d2	58%	J+/UJ - Associated Compounds
13	1,1-Dichloroethene-d2	59%	UJ - Associated Compounds
19DL	1,1-Dichloroethene-d2	54%	None - 5X Dilution

Matrix Spike/Matrix Spike Duplicate (MS/MSD) Recoveries

- The MS/MSD samples exhibited acceptable %R and RPD values.

Laboratory Control Samples

- LCS samples were not analyzed.

Internal Standard (IS) Area Performance

- All internal standards met response and retention time (RT) criteria

Target Compound Identification

- All mass spectra and quantitation criteria were met.

Compound Quantitation

- EDS Sample ID #s 5 and 9 exhibited high concentrations of tetrachloroethene and were flagged (E) by the laboratory. The samples were reanalyzed at a 10X and 5X dilution respectively, and the dilution results for tetrachloroethene should be used for reporting purposes.

Tentatively Identified Compounds (TICs)

- All TICs were qualified estimated (J) for unknown compounds and (NJ) for tentatively identified compounds.

Field Duplicate Sample Precision

- Field duplicate results are summarized below. The precision was acceptable.

Compound	A-SW-018-D ug/L	A-SW-018 ug/L	RPD	Qualifier
cis-,2-Dichloroethene	0.31	0.35	12%	None
Chloroform	1.5	1.8	18%	
1,1,1-Trichloroetane	0.25	0.30	18%	
Trichloroethene	0.41	0.43	5%	
Bromodichloromethane	0.10	0.090	11%	
Tetrachloroethene	15	17	13%	

System Performance

- Instrument sensitivity and chromatographic performance were acceptable. Degradation of the system performance was not found. Instrument output and response data were reviewed and found to be acceptable.

Regional Quality Assurance and Quality Control

Data Qualifier	Definition
U	The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.
J	The analyte is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
NJ	The analysis has been "tentatively identified" or "presumptively" as present and the associated numerical value is the estimated concentration in the samples.
UJ	The analyte was analyzed for but was not detected. The reported quantitation limits is approximate and may be inaccurate or imprecise.
R	The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the samples.

A Stage 2B/4 validation was performed on the analytical data for seven water samples and four soil samples collected on May 2-4, 2016 by EA Engineering at the Veterans Administration site in Salt Lake City, Utah. The samples were analyzed under the Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) Multi-Media Multi-Concentration Inorganic Analysis ISM02.3.

Specific method references are as follows:

Analysis	*Method References*
Metals/Hg	USEPA CLP ISM02.3

The data have been validated according to the protocols and quality control (QC) requirements of the analytical methods, the Quality Assurance Project Plan (QAPP) 700 South 1600 East PCE Plume AOU-1: East Side Springs, Salt Lake City, Rev. 1, February 2016 and the USEPA National Functional Guidelines for Inorganic Data Review as follows:

- The USEPA "Contract Laboratories Program National Functional Guidelines for Inorganic Superfund Data Review," August 2014;
- and the reviewer's professional judgment.

The following data quality indicators were reviewed for this report:

Inorganics

- Holding times and sample preservation
- Inductively Coupled Plasma/Mass Spectrometry (ICP/MS) Tuning
- Initial and continuing calibration verifications
- Method blank and field QC blank contamination
- Inductively Coupled Plasma (ICP) Interference Check Sample
- Laboratory Control Sample (LCS) recoveries
- Matrix Spike Analysis
- Duplicate Sample Analysis
- ICP Serial Dilution
- Compound Quantitation
- Field Duplicate sample precision
- System Performance
- Regional Quality Assurance and Quality Control
- Overall Assessment of Data

Data Usability Assessment

There were no rejections of data.

Overall the data is acceptable for the intended purposes as qualified for the deficiencies detailed in this report.

Please note that any results qualified (U) due to blank contamination may be then qualified (J) due to another action. Therefore, the results may be qualified (UJ) due to the culmination of the blank contaminations and actions from other exceedences of QC criteria.

Metals (ICP-MS) & Mercury (CVAA)

Holding Times

- All samples were prepared and analyzed within 28 days for mercury and 180 days for all other metals.

A Stage 2B/4 validation was performed on the analytical data for five water samples collected on May 4, 2016 by EA Engineering at the Veterans Administration site in Salt Lake City, Utah. The samples were analyzed under the Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) Multi-Media Multi-Concentration Inorganic Analysis ISM02.3.

Specific method references are as follows:

Analysis	*Method References*
Metals/Hg	USEPA CLP ISM02.3

The data have been validated according to the protocols and quality control (QC) requirements of the analytical methods, the Quality Assurance Project Plan (QAPP) 700 South 1600 East PCE Plume AOU-1: East Side Springs, Salt Lake City, Rev. 1, February 2016 and the USEPA National Functional Guidelines for Inorganic Data Review as follows:

- The USEPA "Contract Laboratories Program National Functional Guidelines for Inorganic Superfund Data Review," August 2014;
- and the reviewer's professional judgment.

The following data quality indicators were reviewed for this report:

Inorganics

- Holding times and sample preservation
- Inductively Coupled Plasma/Mass Spectrometry (ICP/MS) Tuning

- Initial and continuing calibration verifications
- Method blank and field QC blank contamination
- Inductively Coupled Plasma (ICP) Interference Check Sample
- Laboratory Control Sample (LCS) recoveries
- Matrix Spike Analysis
- Duplicate Sample Analysis
- ICP Serial Dilution
- Compound Quantitation
- Field Duplicate sample precision
- System Performance
- Regional Quality Assurance and Quality Control
- Overall Assessment of Data

Data Usability Assessment

There were no rejections of data.

Overall the data is acceptable for the intended purposes as qualified for the deficiencies detailed in this report.

Please note that any results qualified (U) due to blank contamination may be then qualified (J) due to another action. Therefore, the results may be qualified (UJ) due to the culmination of the blank contaminations and actions from other exceedences of QC criteria.

Metals (ICP-MS) & Mercury (CVAA)

Holding Times

- All samples were prepared and analyzed within 28 days for mercury and 180 days for all other metals.

ICP/MS Tuning

- All criteria were met.

DATA VALIDATION SUMMARY REPORT
700 SOUTH 1600 EAST PCE PLUME, AOU-1: EAST SIDE SPRINGS, SALT LAKE CITY, UTAH

Client: EA Engineering, Science & Technology, Inc., Greenwood Village, Colorado
SDG: MH4213
Laboratory: Bonner Analytical Testing Company, Hattiesburg, Mississippi
Site: 700 South 1600 East PCE Plume, AOU-1: East Side Springs, Salt Lake City, Utah
Date: July 31, 2016

EDS ID	Client Sample ID	Laboratory Sample ID	Matrix
1	A-SW-023	6050095-01	Water
1MS	A-SW-023MS	QE10001-MS1	Water
1DUP	A-SW-023DUP	QE10001-DUP1	Water

A Stage 2B/4 validation was performed on the analytical data for one water sample collected on May 3, 2016 by EA Engineering at the Veterans Administration site in Salt Lake City, Utah. The samples were analyzed under the Environmental Protection Agency (USEPA) Contract Laboratory Program (CLP) Multi-Media Multi-Concentration Inorganic Analysis ISM02.3.

Specific method references are as follows:

Analysis	*Method References*
Metals/Hg	USEPA CLP ISM02.3

The data have been validated according to the protocols and quality control (QC) requirements of the analytical methods, the Quality Assurance Project Plan (QAPP) 700 South 1600 East PCE Plume AOU-1: East Side Springs, Salt Lake City, Rev. 1, February 2016 and the USEPA National Functional Guidelines for Inorganic Data Review as follows:

- The USEPA "Contract Laboratories Program National Functional Guidelines for Inorganic Superfund Data Review," August 2014;
- and the reviewer's professional judgment.

The following data quality indicators were reviewed for this report:

Inorganics

- Holding times and sample preservation
- Inductively Coupled Plasma/Mass Spectrometry (ICP/MS) Tuning
- Initial and continuing calibration verifications
- Method blank and field QC blank contamination
- Inductively Coupled Plasma (ICP) Interference Check Sample

- Laboratory Control Sample (LCS) recoveries
- Matrix Spike Analysis
- Duplicate Sample Analysis
- ICP Serial Dilution
- Compound Quantitation
- Field Duplicate sample precision
- System Performance
- Regional Quality Assurance and Quality Control
- Overall Assessment of Data

Data Usability Assessment

There were no rejections of data.

Overall the data is acceptable for the intended purposes as qualified for the deficiencies detailed in this report.

Please note that any results qualified (U) due to blank contamination may be then qualified (J) due to another action. Therefore, the results may be qualified (UJ) due to the culmination of the blank contaminations and actions from other exceedences of QC criteria.

Metals (ICP-MS) & Mercury (CVAA)

Holding Times

- The sample was prepared and analyzed within 28 days for mercury and 180 days for all other metals.

ICP/MS Tuning

- All criteria were met.

Initial Calibration Verification

- All initial calibration criteria were met.

Continuing Calibration Verification

- All continuing calibration criteria were met.

Method Blank

- The method blanks exhibited the following contamination.

ICP-MS Metals				
Blank ID	Compound	Conc. ug/L	Qualifier	Affected Samples
CCB02	Antimony	0.13	U	1
PBW01	Barium	0.16	None	Sample >10X
	Chromium	0.24	U	1
	Copper	0.27	U	1
	Magnesium	0.77	None	Sample >10X

Field QC Blank

- Field QC samples were not collected.

ICP Interference Check Sample

- The ICP interference check sample exhibited acceptable %R values.

Laboratory Control Samples

- The LCS sample exhibited acceptable recoveries.

Matrix Spike/Duplicate Analysis

- The MS/DUP samples exhibited acceptable %R and RPD values except for the following.

MS/MSD Sample ID	Compound	MS %R/MSD %R/RPD	Qualifier	Affected Samples
1	Aluminum	OK/OK/81	J	1
	Manganese	OK/OK/51	J	

ICP Serial Dilution

- ICP serial dilution percent differences (%D) were within acceptance limits.

Compound Quantitation

- All criteria were met.

Field Duplicate Sample Precision

- Field duplicate samples were not collected.

System Performance

- Instrument sensitivity and performance were acceptable. Degradation of the system performance was not found. Instrument output and response data were reviewed and found to be acceptable.

Regional Quality Assurance and Quality Control

- All criteria were met. PE samples were not included with this project.

Overall Assessment of Data

- Compound identification and quantitation criteria were met. Calculations and transcription data were verified. No action was required.

Please contact the undersigned at (757) 564-0090 if you have any questions or need further information.

Data Qualifier	Definition
U	The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.
J	The analyte is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
J+	The result is an estimated quantity, but the result may be biased high.
J-	The result is an estimated quantity, but the result may be biased low.
NJ	The analysis has been "tentatively identified" or "presumptively" as present and the associated numerical value is the estimated concentration in the samples.
UJ	The analyte was analyzed for but was not detected. The reported quantitation limits is approximate and may be inaccurate or imprecise.
R	The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the samples.

SDG NARRATIVE:

SDG Number: MH4213
Case Number: 46115
Contract Number: EPW14029
Contract SOW: ISM02.3

Sample Receipt:
On May 6, 2016 we received 1 water via FedEx air bill 7762 5733 9636. Custody seals were present and intact. The sample was in good condition except for the following discrepancies.

Samples received at an elevated temperature

Issue 1: The samples were received at an elevated temperature of 16°C.

Resolution 1: Per Region 8, the laboratory will note the issue in the SDG Narrative and proceed with analysis of the samples.

pH outside of allowable limits

Issue 2: The samples had an initial pH of 7, HNO3 was added to bring the pH to below 2.

Resolution 2: Per Region 8, the laboratory will note the issue in the SDG Narrative and proceed with analysis of the samples.

Laboratory problems

Issue 3: This Case is scheduled for 7 waters and 7 filtered waters. The laboratory only received 1 unfiltered sample (3 bottles), however, the COC states that this Case is complete.

Resolution 3: Per Region 8, shipping for this Case is complete. The laboratory will note the issue in the SDG Narrative and proceed with analysis of the samples.
Target analytes: TM by ICP-MS/Hg

ICP-MS
The analytical run began 05/12/2016 @ 1149 hrs. MH4213 was over the linear range for Ca; the sample was reanalyzed at an appropriate dilution.

TVOA/VOA Equation	Water sample concentration (ug/L) = $\frac{(A_x)(I_s)(DF)}{(A_{is})(\overline{RRF})(V_o)}$ Soil sample concentration (ug/Kg) = $\frac{(A_x)(I_s)(DF)}{(A_{is})(\overline{RRF})(W_s)(D)}$ Where A_x is the area of the characteristic ion (EICP) for the compound to be measured. A_{is} is the area of the characteristic ion (EICP) for the internal standard. I_s is the amount of internal standard added, in ng. $\overline{RRF}$ is the mean relative response factor from the initial calibration. DF is the dilution factor. V_o is total volume of water purged, in mL. Ws is the weight of sample added to the purge tube in g. D = $\frac{100 - \%moisture}{100}$
SVOA/SVOA SIM Equation	Water sample concentration ug/L = $\frac{(A_x)(I_s)(V_t)(DF)(GPC)}{(A_{is})(\overline{RRF})(V_o)(V_i)}$ Soil sample concentration (ug/Kg) = $\frac{(A_x)(I_s)(V_t)(DF)(GPC)}{(A_{is})(\overline{RRF})(V_i)(W_s)(D)}$ Where A_x is the area of the characteristic ion (EICP) for the compound to be measured. I_s is the amount of internal standard added, in ng. $\overline{RRF}$ is the mean relative response factor from the initial calibration. DF is the dilution factor. GPC = V_{in}/V_{out}: GPC factor. V_{in} is the volume of extract loaded onto GPC column. V_{out} is the volume of extract collected after GPC cleanup. V_t is volume of the concentrated extract in uL. (If no GPC cleanup is performed, then V_t = 1000uL. If GPC cleanup is performed, then $V_t = V_{out}$.). V_i is the volume of the extract injected in uL. V_o: Volume of water extracted in mL W_s is the weight of sample extracted in g. D= $\frac{100 - \%Moisture}{100}$

Sample Receiving

The seven water samples in this SDG were received in sealed shipping container on May 05, 2016. The cooler temperature associated with these samples was 0.9˚C.

The temperature was determined using a calibrated Fluke 66 IR thermometer.

The following issues are noted:

Issue 1: MS and MSD are listed separately on the COC (i.e. H4213MS and H4213MSD). The laboratory will combine the sample volume for H4213 + H4213MS and H4213MSD and receive under sample ID H4213 in their system.

Resolution 1: Per Region 8, the laboratory will note the issue in the SDG Narrative and proceed with analysis of the samples.

Issue 2: The COC lists the analysis as VOA, however, this Case was scheduled for TVOA analysis.

Resolution 2: Per Region 8, the laboratory shall analyze the samples as scheduled. The laboratory will note the issue in the SDG Narrative and proceed with analysis of the samples

TVOA Fraction

The peak eluting at ~6.2min on MSD5 in all analyses is Pentafluorobenzene. This is an internal standard compound that is not being used for quantitation. This compound is not being identified as a TIC.

The peak eluting at ~8.8min on MSD5 in all analyses is an extra DMC in the standard that is not being used for quantitation. This compound is not being identified as a TIC.

The peak eluting at ~6.2min on MSD8 in all analyses is Pentafluorobenzene. This is an internal standard compound that is not being used for quantitation. This compound is not being identified as a TIC.

The peak eluting at ~8.8min on MSD8 in all analyses is an extra DMC in the standard that is not being used for quantitation. This compound is not being identified as a TIC.

See the attached Manual Integration Report for a listing of all manual integrations associated with the samples and standards in this SDG. Unless otherwise noted manual integrations were performed due to incorrect auto integration.

As per the SOW, an example calculation is attached for Vinyl Chloride-d_3 in sample H4001.

SVOA Fraction

See the attached Manual Integration Report for a listing of all manual integrations associated with the samples and standards in this SDG. Unless otherwise noted manual integrations were performed due to incorrect auto integration.

As per the SOW, an example calculation is attached for Phenol-d_5 in sample H4213.

TRACE-VOLATILE SAMPLE DATA

Sample data shall be arranged in packets with the Volatile Analysis Data Sheet (Form 1A-OR, 1B-OR), followed by the raw da the VOA samples. These sample packets shall be placed in increasing EPA sample number order, considering both letters and numbers.

-Target Compound Results (Form 1A-OR)
-Tentatively Identified Compounds (Form 1B-OR)
List up to 30 TICs
-Quantitation Report showing calculation for TCL Analytes
-Quantitation Report showing calculation for TICs
-Reconstructed Total Ion Chromatograms
-Raw Spectra & background subtracted mass spectra of TCL Analytes identified in the sample
-Mass Spectra of organic compounds not listed in Exhibit C with associated best match spectra
-Printout of Manual Integrations

Spectra shall be labeled as follows:

EPA Sample ID number, Sample ID number, Lab file ID, Date & Time of analysis and Instrument ID.
The compound name must be clearly marked.

Subject: Region 08 | Case 46115 | Lab EQI | Issue Documentation | FINAL

Good morning,

Incorrect/duplicated sample IDs
Issue 1: MS and MSD are listed separately on the COC (i.e. H4213MS and H4213MSD). The laboratory will combine the sample volume for H4213 + H4213MS and H4213MSD and receive under sample ID H4213 in their system.
Resolution 1: Per Region 8, the laboratory will note the issue in the SDG Narrative and proceed with analysis of the samples.

Discrepancies with tags, jars, and/or COC
Issue 2: The COC lists the analysis as VOA, however, this Case was scheduled for TVOA analysis.
Resolution 2: Per Region 8, the laboratory shall analyze the samples as scheduled. The laboratory will note the issue in the SDG Narrative and proceed with analysis of the samples.

Please let me know if you have any questions. To waive any defect(s) associated with this issue, please contact your Regional CLP COR.

Subject: Region 8 Case 46115 receiving issues

Hi Alexandra,

We received one cooler for Case 46115 today. Everything is fine except for two items.

The shipper listed the MS & MSD separately on the TR/COC (i.e. H4213MS & H4213MSD). We will combine the sample volume for H4213 + H4213MS and H4213MSD and receive under one CLP sample ID in our LIMS (H4213).

Also, the TR/COC notes “VOA” for analysis whereas the schedule notes “TVOA”. We have received these samples in our LIMS as TVOA per the schedule.

A copy of the TR/COC attached.

Received Sample Set(s), [Work Order : Date Received]:
[C160505 : 05/04/2016]

Attached are the analytical results for the samples received from the 700 S 1600 E PCE Plume_SW_MAY 2016_A107 sampling event, according to TDF A-107. All analyses were performed within their method specified holding times unless otherwise noted in the following narrative.

These samples were prepared, analyzed, and verified by the Environmental Services Assistance Team Laboratory (ESAT) according to the requirements of the Technical Direction Form (TDF).

Note: The laboratory herewith transmits this deliverable to the program/project partner for determination of "final data usability" which may include data validation and data quality asessment per and in accordance with EPA QA/G-8, *Guidance on Environmental Data Verification and Data Validation*, November 2002, EPA/240/R-02/004. Laboratory data qualifiers are applied based on the *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review,* October 2004, referred to as "NFGI".

Laboratory policy is to dispose of any remaining sample 60 days after data analysis packages are delivered to EPA. If you would like the laboratory to retain the samples for a period longer than 60 days, please contact Don Goodrich within the 60 day period at (303) 312-6687.

Holding Times: All samples were analyzed within their method-specified technical holding time(s).

1. Initial and Continuing calibration blanks (ICBs and CCBs).
   Exceptions: None.
2. Preparation (PB) / Method blanks (MB)
   Exceptions: None.
3. Interference Checks (ICSA / ICSAB) for ICP-MS and ICP-OE analyses only.

Method(s) Summary:

As defined in the Technical Direction Form (TDF), some or all of the methods listed below were used for the determination of the reported target analytes.

From EPA's *Methods for the Determination of Metals in Environmental Samples* , Supplement I, May 1994, dissolved, total, and/or total recoverable metals were determined by:

- Method 200.7 / 6010B using a PE Optima ICP -OE (ICP).
- Method 200.8 / 6020 using a Perkin -Elmer Elan 6000 ICP-MS.
- Method 200.2 for total recoverable metals (only) dige stion.
- Method 245.1 using a Perkin -Elmer FIMS CVAA (aqueous mercury only).

From *Standard Methods for the Examination of Water and Wastewater* , 18th Edition, 1992, Method 2340B was used for the calculated hardness determination. Hardness is reported as mg (milligram) equivalent $CaCO_3$ per liter (L) determined as follows:

Calculated hardness = 2.497 * (Calcium, mg/L) + 4.118 * (Magnesium, mg/L).

From *EPA's Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, SW -846*,

- Method 3015A was used for microwave assisted total metals digestion.
- Method 7473 was used for mercury in solids .

From EPA's *Determination of Inorganic Anions by Ion Chromatography* , Revision 2.1, 1993, Method 300.0 was used to determine the anions.

From EPA's *Methods for Chemical Analysis of Water and Wastes* , March 1983:

- Method 310.1 was followed for the alkalinity determination.
- Method 160.1 was followed for gravimetric total dissolved solids (TDS) determination.
- Method 160.2 was used for gravimetric total suspended sol ids (TSS) determination.
- Method 415.3 was used for total organic carbon (TOC) determination using either an Apollo 9000 or Phoenix 8000 Non-Dispersive IR (NDIR) system. Also known as dissolved organic carbon (DOC) when performed on the dissolved sample fraction.

The quality control procedures listed in the TDF request were utilized by ESAT to verify accuracy of the results and to evaluate any matrix interferences.

Hey Janelle, attached is the revised TDF that I submitted back in early April but I likely did not include you on the distribution list. pH is not required for the samples that just arrived.

Thanks,
Don

Don,
We just received samples collected on 5/3/16, indicating A-107 as the TDF. The TDF has one sampling event ending 2/26/16. They are requesting TDS, Anion for analyses (I do not know about pH which is stated on the TDF). How do you want us to proceed?

Thanks,

Name: 700 South 1600 East PCE Plume

Details: The Contractor shall analyze several water samples encompassing two separate sampling events at the 700 South 1600 East PCE Plume Superfund site. For the first event, ESAT shall analyze approximately eight samples for anions, pH, and TDS as indicated in the Analytical Information Section. The samples are expected to be collected by EA Engineering and submitted to the R8 ESAT Lab the week ending 2/26/16. The second sampling event is expected to take place in late-April 2016. Approximately 11 samples will be submitted by EA Engineering for the same parameter list as for the first event.

[C160506 : 05/05/2016]

Attached are the analytical results for the samples received from the 700 S 1600 E PCE Plume_SW 2_MAY 2016_A107 sampling event, according to TDF A-107. All analyses were performed within their method specified holding times unless otherwise noted in the following narrative.

These samples were prepared, analyzed, and verified by the Environmental Services Assistance Team Laboratory (ESAT) according to the requirements of the Technical Direction Form (TDF).

Note: The laboratory herewith transmits this deliverable to the program/project partner for determination of "final data usability" which may include data validation and data quality asessment per and in accordance with EPA QA/G-8, *Guidance on Environmental Data Verification and Data Validation*, November 2002, EPA/240/R-02/004. Laboratory data qualifiers are applied based on the *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review,* October 2004, referred to as "NFGI".

Laboratory policy is to dispose of any remaining sample 60 days after data analysis packages are delivered to EPA. If you would like the laboratory to retain the samples for a period longer than 60 days, please contact Don Goodrich within the 60 day period at (303) 312-6687.

Quality Assessment: Unless indicated by exception, the QA/QC associated with this sample set produced data within the TDF-specified criteria.

Holding Times: All samples were analyzed within their method-specified technical holding time(s).

1. Initial and Continuing calibration blanks (ICBs and CCBs).
   Exceptions: None.
2. Preparation (PB) / Method blanks (MB)
   Exceptions: None.
3. Interference Checks (ICSA / ICSAB) for ICP-MS and ICP-OE analyses only.
   Exceptions: None.
4. Initial and Continuing calibration verification analyses (ICVs, SCVs and CCVs).
   Exceptions: None.
5. Laboratory Control Sample (LCS) or second source analysis or SRM.
   Exceptions: None.
6. Laboratory Fortified blank (LFB) / Blank spike (BS), same source as used for the matrix spikes. PBS performed with analyses/methods requiring preparation or digestion prior to analysis.
   Exceptions: None.
7. Contract Reporting Detection Limit Standard, labeled as CRA, CRDL or CRL.
   Exceptions: None.
8. Laboratory Duplicate (DUP). "Source" identifies field sample duplicated in the laboratory. If either the "source" or the duplicate result is <5X the reporting limit, the %D limit of 20% does not apply.
   Exceptions: None.
9. Laboratory Matrix Spike (MS) and spike duplicate (MSD). "Source" defines original field sample fortified prior to analysis. Percent recovery (%R) limits do not apply when sample concentration(s) exceed the corresponding analyte spike level by a factor of 4 or greater.
   Exceptions: None.
10. Serial Dilution sample analysis (SRD). "Source" is parent field sample diluted 1:5 in the laboratory. Performed for ICP-OE and ICP-MS metals analyses. Percent difference (%D) limits do not apply when analyte concentration(s) are below 50x the source sample's MDL (or 10x it's PQL).
    Exceptions: None.
11. Internal standards, criteria specified for ICP-MS analyses only, monitored at the instrument.
    Exceptions: None.
12. Any calibration using more than two-points produced a correlation coefficient equal to or greater than 0.995.
    Exceptions: None.

Method(s) Summary:

As defined in the Technical Direction Form (TDF), some or all of the methods listed below were used for the determination of the reported target analytes.

From EPA's *Methods for the Determination of Metals in Environmental Samples* , Supplement I, May 1994, dissolved, total, and/or total recoverable metals were determined by:

- Method 200.7 / 6010B using a PE Optima ICP -OE (ICP).
- Method 200.8 / 6020 using a Perkin -Elmer Elan 6000 ICP -MS.
- Method 200.2 for total recoverable metals (only) dige stion.
- Method 245.1 using a Perkin -Elmer FIMS CVAA (aqueous mercury only).

From *Standard Methods for the Examination of Water and Wastewater* , 18th Edition, 1992, Method 2340B was used for the calculated hardness determination. Hardness is reported as mg (milligram) equivalent $CaCO_3$ per liter (L) determined as follows:

Calculated hardness = 2.497 * (Calcium, mg/L) + 4.118 * (Magnesium, mg/L).

From *EPA's Test Methods for Evaluating Solid Waste, Physical/Chemical Methods, SW -846*,

- Method 3015A was used for microwave assisted total metals digestion.
- Method 7473 was used for mercury in solids .

From EPA's *Determination of Inorganic Anions by Ion Chromatography* , Revision 2.1, 1993, Method 300.0 was used to determine the anions.

From EPA's *Methods for Chemical Analysis of Water and Wastes* , March 1983:

- Method 310.1 was followed for the alkalinity determination.
- Method 160.1 was followed for gravimetric total dissolved solids (TDS) determination.
- Method 160.2 was used for gravimetric total suspended sol ids (TSS) determination.
- Method 415.3 was used for total organic carbon (TOC) determination using either an Apollo 9000 or Phoenix 8000 Non-Dispersive IR (NDIR) system. Also known as dissolved organic carbon (DOC) when performed on the dissolved sample fraction.

The quality control procedures listed in the TDF request were utilized by ESAT to verify accuracy of the results and to evaluate any matrix interferences.

Name: 700 South 1600 East PCE Plume

Details: The Contractor shall analyze several water samples encompassing two separate sampling events at the 700 South 1600 East PCE Plume Superfund site. For the first event, ESAT shall analyze approximately eight samples for anions, pH, and TDS as indicated in the Analytical Information Section. The samples are expected to be collected by EA Engineering and submitted to the R8 ESAT Lab the week ending 2/26/16. The second sampling event is expected to take place in late-April 2016. Approximately 11 samples will be submitted by EA Engineering for the same parameter list as for the first event.

13 water samples were delivered to the laboratory intact on 02/26/2016.
7 water samples were delivered to the laboratory intact on 02/27/2016.

Test requested on the Chain of Custody was Volatile Organic by Method SOM02.3.

Samples for Volatile Organic analyses were transferred unopened to the Volatile Laboratory.
Sample Tags were not received with the samples.

The temperature of the samples was measured using an I R Gun. The samples temperature was 3.1, 4.0 and 4.1 degrees Celsius for the samples received on 2/26/2016. The samples temperature was 3.0 degrees Celsius for the samples received on 2/27/2016.

Shipping Discrepancies and/or QC issues:

Issue 1 : Sample tags were not received with samples at the laboratory. Sample tag numbers may or may not be listed on the TR/COC.

Resolution 1: In accordance with previous direction from Region 8, the laboratory will note the issue in the SDG Narrative, and proceed with the analysis of the sample. The Resolution will be applied to all samples received for this Case.

Issue 2: The laboratory received three organic water samples 2/23 for Case 46018. Organic samples for this Case are scheduled for TVOA and SVOA; however, COC lists the analysis as VOA.

Resolution 2: Per Region 8, the laboratory will analyze the three samples as scheduled for TVOA. The laboratory will note the issue in the SDG Narrative and proceed with analysis of the samples.

Trace Volatiles:

The analysis performed on instrument MSVOA_I were done using C column RXI-624 30m 0.25mm 1.4um 872456. The Trap was supplied by OI Analytical, OI #10 Trap , OI Eclipse 4660 Concentrator.

The analysis performed on instrument MSVOA_R were done using GC column RXI-624SIL MS 30m 0.25mm 1.4um 872456. The Trap was supplied by OI Analytical, OI #10 Trap, OI Eclipse 4660 Concentrator.
The analysis of VOC-Low Level -15 was based on method SOM02.3_Trace.

Surrogate recoveries met the criteria except for the followings:

H0061[1,1,2,2-Tetrachloroethane-d2-125%].
H0012 [1,1-Dichloroethene-d2-57%].
H0015[[1,1-Dichloroethene-d2-57%].
H0901 [1,1-Dichloroethene-d2-58%].
As per method, up to 3 surrogates are allowed to fail; therefore no corrective action was needed for above mention samples.
Holding Times were met.

The MSD { H0001MSD}recoveries met the requirements.
The RPD for recoveries met criteria
Retention Times met requirements.
The Internal Standards Areas met requirements.
The Initial Calibration met the requirements.
The Continuing Calibration met the requirements.
The Blank analysis did not indicate the presence of lab contamination.
The Storage Blank did not indicate the presence of lab contamination

See **Manual Integration report** for the manual integration information at the end of the case narrative.

Calculation:

$$\text{Concentration in ug/L} = \frac{(Ax)\,(Is)\,(DF)}{(Ais)\,(RRF)\,(Vo)}$$

Where,

Ax = Area of the characteristic ion (EICP) for the compound to be measured.
Ais = Area of the characteristic ion (EICP) for the internal standard.
Is = Amount of internal standard added in ng.
RRF = Mean Relative Response Factor from the initial calibration standard.
Vo = Total volume of water purged, in mL.
DF = Dilution Factor.

Example Calculation for sample # H0001 for Chloroform:

Ax= 84586
Is= 250
RRF= 0.648
DF=1
Ais=537659
Vo = 50

$$\text{Concentration in ug/L} = \frac{(84586)\ (250)\ (1)}{(537659)(0.648)\ (50)}$$

$$= 1.21 \text{ ug/L}$$

Reported Result = 1.2 ug/L

Relative Response Factor =:Tetrachloroethene RUN # VR022516 for 5 ppb

$$RRF = \frac{\text{Area of compound}}{\text{Area of Internal Standard}} \times \frac{\text{Conc. of Internal Standard}}{\text{Conc. of Compound}}$$

$$RRF = \frac{146506}{461306} \times \frac{5.0}{5.0} = 0.3175$$

RRF=0.318

Semivolatiles

The samples were analyzed on instrument BNA_M using GC Column ZB-SemiVolatiles Guardian which is 30 meters, 0.25 mm ID, 0.5 um df, Catalog # 7HG-G027-17-GGA.

Semi volatile Organic samples for water were extracted by Method SOM02.3 on 02/26/16

The Holding Times were met for all analysis.
The Surrogate recoveries met the acceptable criteria except for H0075 [1,4-Dioxane-d8 - 0%, 4-Chloroaniline-d4 - 0%, 4-Nitrophenol-d4 - 5%], H0075MS [1,4-Dioxane-d8 - 13%, 4-Chloroaniline-d4 - 0%, 4-Nitrophenol-d4 - 9%], H0075MSD [1,4-Dioxane-d8 - 0%, 4-Chloroaniline-d4 - 0% and 4-Nitrophenol-d4 - 8%]. As per method four surrogates are allowed to fail. No further corrective action was taken.
The Internal Standards Areas met the acceptable requirements.
The Retention Times were acceptable for all samples.
The MS {H0075MS} with File ID: BM004537.D recoveries met the requirements for all compounds except for 4-Nitrophenol [7%].
The MSD {H0075MSD} with File ID: BM004538.D recoveries met the acceptable requirements except for 4-Nitrophenol [6%].
The RPD recoveries met criteria.
The Blank analysis did not indicate the presence of lab contamination.
The Initial Calibration met the requirements.
The Continuous Calibration met the requirements.
The Tuning criteria met requirements.

See **Manual Integration report** for the manual integration information at the end of the case narrative.

Concentration of Water Sample:

$$\text{Concentration ug/L} = \frac{(Ax)\,(Is)\,(Vt)\,(DF)\,(GPC)}{(Ais)\,(\overline{RRF})\,(Vo)\,(Vi)}$$

Where,

Ax = Area of the characteristic ion for the compound to be measured.
Ais = Area of the characteristic ion for the internal standard.
Is = Amount of internal standard injected in ng.
Vo = Volume of water extracted in mL.
Vi = Volume of extract injected in uL.
Vt = Volume of the concentrated extract in uL

$\overline{RRF}$ = Mean Relative Response Factor determined from the initial calibration standard.
GPC = $\frac{Vin}{Vout}$ = GPC factor (If no GPC is performed, GPC=1)

No target compounds were detected on the sample.

RRF Calculation of standard 20 ppb for Dimethylphthalate for the run 03/03/16 with M instrument.

RRF= Area of compound / Area of Internal Standard X Conc. of Internal Standard / Conc. of Compound

= 132354/ 71935 X 20/20

= 1.840 (Reported RRF)
