Section 1
Introduction

Under the U.S. Army Corps of Engineers, Kansas City District Contract No. W912DQ-18-D-3008, Task Order No. W912DQ19F3048, CDM Federal Programs Corporation (CDM Smith) was directed to perform a remedial investigation (RI) for Operable Unit (OU) 1 of the 700 South 1600 East Tetrachloroethene (PCE) Plume Superfund Site in Salt Lake City, Utah. This data summary report (DSR) was prepared by CDM Smith to present the results of the second quarter 2020 (Q2-2020) groundwater monitoring event as part of the RI field characterization activities.

1.1 Background

The Salt Lake City Healthcare System George E. Wahlen Veterans Affairs Medical Center (VAMC) is in Salt Lake City, Utah (**Figure 1**). PCE contamination was first identified in groundwater in 1990 at the nearby Mt. Olivet Cemetery irrigation well during routine monitoring by the Salt Lake City Department of Public Utilities. This led to U.S. Environmental Protection Agency (EPA) and Utah Department of Environmental Quality (UDEQ) involvement at the Site and the preliminary determination that the source of PCE in groundwater was the historic dry-cleaning facility located at the VAMC. The Veterans Health Administration (VHA) operated a part-time dry-cleaning operation that used PCE over a 6-year period in the late 1970s and early 1980s. During this period, dry cleaning residuals were disposed of in the sanitary sewer. The PCE groundwater plume is present beneath the VAMC property and in areas hydraulically downgradient, extending to the East Side Springs (ESS) neighborhood. In addition, elevated concentrations of PCE in soil gas and subslab vapor (up to 46,101 micrograms per cubic meter [µg/m^3]) have been observed adjacent to VAMC Buildings 6 and 7 (location of the VAMC dry-cleaning facility).

1.2 Purpose and Scope

The purpose and scope of this DSR is to describe the work conducted and present the analytical and field data collected during the Q2-2020 groundwater monitoring event. Recommendations for improvements for future sampling events are also included.

Section 2
Field Sampling Activities

The following sections outline the field sampling activities that were completed during the Q2-2020 sampling event.

2.1 Groundwater Sampling

The Q2-2020 groundwater monitoring event included collecting samples at 26 existing wells and 5 newly installed wells (MW-23A/B/C, MW-25A/B/C, MW-26A/B/C/D, MW-27 and MW-28). Because of multiple screened intervals at several wells, an anticipated 43 samples were to be collected. All monitoring wells (including previously abandoned wells and wells installed after Q2-2020) are shown on **Figure 1,** and location data and well construction details are presented in **Table 1**. The sampling activities were conducted per the OU2 RI Work Plan (CH2M 2018), OU2 RI Quality Assurance Project Plan (QAPP) (CDM Smith 2019a), Modification #2 to the OU2 RI Work Plan and Sampling and Analysis Plan (CDM Smith 2019b), and Modification #4 to the OU2 RI Work Plan and Sampling and Analysis Plan (CDM Smith 2020).

Several groundwater wells are in the public right-of-way, requiring traffic control and special work requirements to be implemented when those wells are accessed. The associated traffic control permit and location-specific plans acquired from Salt Lake City Division of Transportation are attached (**Appendix A**). Field forms associated with this event, including the field logbook pages, water level measurement recordings, and sample purge forms, are included in **Appendix B**.

2.1.1 Synoptic Water Level Measurement

Prior to beginning sampling activities, synoptic water levels were collected on June 16, 2020 (with the exception of MW-26, which was measured on June 9, 2020), from 44 wells following procedures outlined in Standard Operating Procedure (SOP) 1-6, *Groundwater Level Measurement* (CDM Smith 2019a). Manual water level measurements were recorded from the northern edge of the casing using electronic water level meters. At artesian well MW-14D, the pressure reading on the gauge was recorded and converted to feet above the top of casing. At artesian well MW-17D, a standpipe was installed and the water level above the top of casing was recorded. Water levels are presented in **Table 2**.

Water levels at newly installed wells MW-29, MW-30, MW-31, and MW-34 were measured on July 20, 2020. These measurements were not part of the June 16, 2020 synoptic round; however, a comparison of the transducer measurements in a subset of wells showed negligible changes in water levels over the previous 2 months, therefore, the July measurements can be included with the June synoptic data for contouring and analyses purposes. The July water levels are also included in **Table 2**.

The collection of water level measurements in monitoring wells with dedicated Zone Isolation Sampling Technology (ZIST) pumps requires pulling the pump and allowing the water to

equilibrate in the well casing. ZIST pumps provide isolation of the screen by creating a seal in the well casing when the pump is properly seated in the well screen dock. To collect water level measurements, the pumps were pulled about 1 foot out of the seating in the well casing for approximately 3 hours to allow for the water level to equilibrate following pump removal. After verifying that water levels had stabilized, the manual water level measurement was recorded, and the pump was properly reseated.

The following wells have dedicated ZIST pumps:

- MW-03RA/B/C/D
- MW-08C
- MW-23A/B/C
- MW-25A/B/C
- MW-26A/B/C/D
- MW-29A/B/C
- MW-30A/B/C
- MW-31A/B/C
- MW-32A/B/C
- MW-34A/B/C/D

2.1.2 Groundwater Sampling Procedures

All wells were sampled per project-specific SOP 6-2, *Low-Stress (Low-Flow) Groundwater Sampling* (CDM Smith 2020). All wells, except for MW-14D and MW-17D, were sampled using dedicated pumps.

Prior to collecting groundwater samples with low-flow sampling techniques, each well was purged to remove a minimum volume, which was calculated prior to the event. The minimum purge volume is three times the total amount of stagnant water in the pump and tubing. Low-flow groundwater sampling includes purging the well at a rate typically less than 500 milliliters per minute (mL/min) and with minimal drawdown (less than 0.3 feet) to ensure that the water sampled is representative of the formation surrounding the screened interval and not of the stagnant water column. If the drawdown exceeds 0.3 feet, the stagnant water column is contributing to the purge water and the minimum purge volume must be recalculated. Once the minimum purge volume has been removed and water quality parameters stabilized as described in SOP 6-2, samples were collected.

At MW-14D a permanent valve and gauge were previously installed to assist in controlling the artesian flow at the well. During sampling, the team opened the valve to maximum capacity and noted the flow rate as grab samples were collected for field parameter analysis. The flow rate decreased considerably over the purging period, from an initial flow of approximately 780 mL/min to 300 mL/min.

MW-17D was sampled using a portable bladder pump, set at the midpoint of the screen. MW-17D has been observed to be seasonally artesian and a permanent threaded connection was previously attached to the well head to plug the well. As a result, a dedicated bladder pump can no longer be used to sample the well. During the sampling event, water was not free flowing from MW-17D; therefore, the team installed a standpipe above the height of water elevation to sample the well. The well was purged until parameters were stabilized and samples were collected.

All groundwater sampling was completed according to the project-specific SOP 6-2, *Low-Stress (Low-Flow) Groundwater Sampling* (CDM Smith 2020), with the exception of deviations outlined in Section 2.5. Field documentation of sampling procedures are provided in **Appendix C**.

2.1.3 Sample Analysis

The water quality parameters were analyzed continuously while purging with the use of a flow-through cell. The following parameters were noted and are detailed for each well:

- Dissolved oxygen (DO)
- Oxidation-reduction potential (ORP)
- pH
- Temperature
- Conductivity
- Turbidity

In addition to the field parameters, samples were collected from each well for the following analyses (**Table 3**):

- Volatile organic compounds (VOCs) by EPA Method SW8260C
- Total metals (unfiltered) by EPA Method SW6020A/SW7470A
- Total dissolved solids (TDS) by EPA Method SM2540C
- Alkalinity by EPA Method SM2320B
- Anions (sulfate, chloride) by EPA Method E300.0
- Dissolved gases (methane, ethane, ethene) by RSK-175
- Total organic carbon (TOC) by EPA Method SW9060A
- Nitrate and nitrite by EPA Method SM4500-NO3E
- 1,4-dioxane by EPA Method 8270D
- Ferrous iron (measured in the field using a HACH 8146)

All samples were submitted to EMAX Laboratories in Torrance, California. The analytical results are discussed in Section 3. Laboratory data are included in **Appendix C**. Field quality control samples were collected, including field duplicates, matrix spike/matrix duplicates, and trip blanks (for VOCs only), and are discussed in the Quality Control Summary Report in **Appendix C**. Sample results meet the data quality objectives presented in the QAPP (CDM Smith 2019a) and are useable for the intended purposes.

2.2 Transducer Data Collection

Transducer data were downloaded from 11 groundwater wells during the Q2-2020 groundwater monitoring event. The data from the June 2020 download date back to December 2019. **Table 2** presents the date, time, and location of transducer data downloads during Q2-2020. Hydrographs were prepared from the transducer downloads and are presented in **Appendix D**.

2.3 Groundwater Monitoring Well Repairs

Prior to, during, and following the Q2-2020 groundwater monitoring event, CDM Smith conducted well repairs and upgrades to the existing groundwater monitoring wells. The dates and details associated with the well repairs are outlined below:

- April 2020: Redeployed dedicated bladder pumps (and transducers when present) using stainless steel cables at the following wells: MW-02, MW-04, MW-05R, MW-06, MW-08A/B, MW-08B, MW-12S/D, MW-13S/D, MW-14S, MW-15S/D, MW-16S/D, MW-17S, MW-18, MW-19, MW-20S/D, MW-21, and MW-22. Additionally, new bladders were installed in the dedicated pumps at MW-21 and MW-22. The pump that was removed from MW-17D was decontaminated and redeployed for use with new tubing and cable into MW-01S. An equipment blank was collected from the pump following decontamination and prior to installation in MW-01S.
- June 2020: Push-to-connect fittings with plugs on the water lines and quick-connect fittings on the air lines were installed at the following wells: MW-23A, MW-23B, MW-23C, MW-25A, MW-25B, MW-25C, MW-26A, and MW-26D. Additionally, the quick-connect fittings on the air lines were replaced on the following wells because of corrosion of the existing fitting: MW-03RA, MW-03RB, MW-03RC, MW-03RD, and MW-08C.

Throughout each well repair event, well tags were added to all monitoring wells. Additional well repairs are expected to be conducted during the third quarter 2020 monitoring event, including securing all unlocked wells with tamper-resistant bolts, replacing the filter elements at all new ZIST wells, and installing volume boosters at the following ZIST wells: MW-23A, MW-25A, MW-26A, MW-29A, MW-31A, MW-32A, and MW-34A.

2.4 Decontamination and Investigation-Derived Waste

All nondedicated equipment used during the groundwater sampling event was decontaminated following the procedures outlined in SOP 4-5, *Field Equipment Decontamination at Nonradioactive Sites* (CDM Smith 2019a). Nondedicated equipment used during this event were electronic water level meters. Investigation-derived waste (IDW) was handled per SOP 2-2, *Guide to Handling Investigation-Derived Waste* (CDM Smith 2019a). All decontamination water and purge water

were containerized at their source and transferred to the holding tanks at the VAMC. These tanks will be emptied as needed by a certified IDW disposal company.

2.5 Deviations from the QAPP

Planned groundwater samples could not be collected from all identified wells. Specifically, samples were not collected from the following wells:

- MW-23A/B
- MW-25A/B
- MW-26A/B/C/D

At these locations, samples were not collected because water was not flowing to the surface during purging. These wells were constructed with ZIST sampling systems with stainless-steel filters on the pump intake. Following the Q2-2020 monitoring event, the team evaluated the new pumps at the surface, and it was determined that the stainless-steel filters were corroded and impeding water flow. **Appendix B** (daily quality control report dated June 25, 2020) presents the troubleshooting activities as well as photos comparing the stainless-steel (with obvious corrosion) and polyethylene filters. All stainless-steel filters will be replaced with polyethylene filters by the ZIST provider prior to the next sampling event. These wells will be sampled along with all other newly installed wells during the third quarter 2020 event. As not all newly installed wells were ready to be sampled during the Q2-2020 event, project data needs are not impacted by the lack of sampling at these locations.

Section 3
Groundwater Monitoring Results

Groundwater monitoring results, specifically groundwater elevations and analytical results, are presented below.

3.1 Groundwater Elevations

Measured groundwater elevations are presented in **Table 2** and on the potentiometric groundwater surface maps (**Figures 2** and **3**). The potentiometric groundwater contours were developed from manual groundwater elevation measurements collected during the synoptic event on June 16, 2020, and separate measurements at new wells collected on June 9, 2020 and July 20, 2020. Evaluation of the groundwater elevation data resulted in the following observations.

Based on the combined June and July dataset, the subsurface was divided into the following hydraulic zones:

- Perched Zone: This zone is situated above the water table, exhibiting significantly higher piezometric heads than what is observed at other wells. The only wells that exhibit this behavior are MW-06 (screened 100 to 130 feet below ground surface [bgs]) and MW-29A (screened 120 to 130 feet bgs). Perched zone piezometric head data were not contoured due to the limited occurrence of this zone.
- Shallow Aquifer Zone: This zone extends to approximately 220 feet bgs at VAMC Building 7 and gets shallower to the west as the ground surface dips. The Shallow Aquifer Zone is contoured (using a 10-foot-contour interval) in **Figure 2**.
    - Flow directions are generally east to west, with horizontal gradients approximately 0.014 feet/foot along the 2,500 feet between MW-24 and MW-34. Over the next 1,000 feet between MW-34 and MW-18, the horizontal gradients are approximately 0.012 feet/foot. Between MW-13S and MW-14S (approximately 500 feet), horizontal gradients are an order of magnitude higher, at approximately 0.12 feet/foot.
- Deep Aquifer Zone: This zone sits below approximately 260 feet bgs at VAMC Building 7 and gets shallower to the west as the ground surface dips. The Deep Aquifer Zone heads are contoured in **Figure 3**.
    - Flow directions are generally east to west, with horizontal gradients between MW-23C and MW-34C that are approximately 0.002 feet/foot and 0.024 feet/foot between MW-34C and MW-14D.
    - Piezometric heads at MW-03RB/C/D show that heads are approximately 20 feet lower than in the Shallow Aquifer Zone situated approximately 40 feet above. These steep vertical gradients are indicative of hydraulic separation between the Shallow and Deep

Aquifer zones; likely because of the presence of an aquitard between 220 and 260 feet bgs.

- Heads at MW-03RB/C/D are nearly identical despite spanning nearly 100 vertical feet of the aquifer. This likely indicates the lack of significant aquitard units within the Deep Aquifer Zone.

- Middle Zone: This zone sits between the Shallow and Deep Aquifer Zones (approximately 220 to 260 feet bgs) at wells near VAMC Building 7 including MW-23B, MW-25B, MW-26B, MW-29C, and MW-30A. The zone is characterized by heads that are slightly lower than those in the Shallow Aquifer Zone. It is unclear how laterally extensive this zone is and whether it is bounded by lower permeability units. Head data from this unit have not been contoured.

Vertical gradients, which are typically strongly downward on-site, dissipate along the east to west groundwater flow path. While MW-34C/D are estimated to be screened in the Deep Aquifer Zone, there is little distinction in heads between MW-34C/D and the Shallow Aquifer Zone at MW-34A/B. West of MW-34, vertical head gradients shift upwards, with artesian conditions present in the Deep Aquifer Zone at wells MW-17D and MW-14D, just east of the fault. West of the fault, both the vertical head differences and the distinction between the Shallow and Deep Aquifer zones are not present.

The significant amount of new piezometric head data collected has allowed for the more refined understanding of groundwater flow directions, gradients, and vertical head differences described above. This new hydraulic framework, notably the separation of the aquifer into two distinct hydraulic zones, will be incorporated into the conceptual site model and compared to the other datasets collected from the wells, including lithologic and water quality data. Further refinements to the zonation of the system may be necessary upon review of the conceptual site model and will be incorporated into future reports.

3.2 Groundwater Analytical Results

Analytical results from the Q2-2020 groundwater monitoring event are presented below.

3.2.1 Volatile Organic Compounds

Groundwater samples were collected and analyzed for VOCs (EPA method SW-8260). **Table 4** presents the concentrations of detected VOCs compared to the EPA maximum contaminant levels (MCLs) or regional screening levels (RSLs) for tap water (for compounds without an established MCL). Detections are presented as bolded values and exceedances of the MCL or RSL are presented as highlighted values. Additionally, the approximate extent of PCE in groundwater and results for PCE and trichloroethene (TCE) are shown in **Figure 4**.

PCE exceeded the MCL (5 µg/L) in 15 samples, with concentrations ranging from 6.4 to 210 µg/L. The highest concentrations of PCE were detected in MW-03RB (210 µg/L) and MW-02 (190 J µg/L). PCE was detected at concentrations less than 5 µg/L in 10 samples and was not detected (concentrations less than 1 µg/L) in 10 samples. PCE was nondetect or below the MCL in MW-05R, MW-06, MW-27, and MW-28, bounding the plume to the east. PCE was nondetect or below

the MCL in MW-01D, MW-03RD, MW-08C, MW-23C, and MW-25C, providing a possible vertical extent for the PCE plume in these locations. PCE was nondetect or below the MCL in MW-12S/D, MW-15S/D, and MW-17S/D, providing a southern plume boundary (**Figure 4**). Overall, PCE concentrations in groundwater remained relatively stable between Q4-2019 (CDM Smith 2020) and Q2-2020 (**Table 4**).

TCE was detected at concentrations below the MCL (5 µg/L) in 16 samples, with the highest detection at MW-14S (4.8 µg/L). Low-level (less than 2 µg/L) detections of cis-1,2-dichloroethene were observed in 12 samples, with the highest detection at MW-03RB (1.3 µg/L). There were no detections of vinyl chloride.

3.2.2 1,4-Dioxane

All analytical results for 1,4-dioxane are presented in **Table 4**. Because no MCL is established for 1,4-dioxane, results are screened against the RSL of 0.46 µg/L. No detections of 1,4-dioxane were observed in any sample.

3.2.3 Metals

All analytical results for total (unfiltered) metals are presented in **Table 5**. Overall, concentrations of metals in groundwater remained relatively stable between Q4-2019 and Q2-2020. The following compounds were detected at concentrations greater than the MCL or RSL:

- Cobalt exceeded the RSL (0.6 µg/L) at MW-03RD (0.629 J µg/L), MW-08C (0.844 µg/L), MW-12S (0.928 J µg/L), MW-13S/D (6.33 and 1.52 µg/L, respectively), MW-14S (2.51 µg/L), MW-17S (1.08 µg/L), MW-23C (0.862 µg/L), and MW-28 (0.718 µg/L).
- Manganese exceeded the RSL (43 µg/L) at MW-03RA/D (59.7 and 261 µg/L, respectively), MW-08C (511 µg/L), MW-13S (772 µg/L), MW-14S (201 µg/L), MW-23C (325 µg/L), MW-25C (110 µg/L), and MW-28 (162 µg/L).
- Nickel exceeded the RSL (39 µg/L) at MW-13S/D (239 and 50.8 µg/L, respectively).

3.2.4 General Chemistry

DO, ORP, sulfate, nitrate, ferrous iron, and methane are geochemical parameters that can be used to evaluate redox conditions. Reductive dechlorination of PCE to TCE and cis-1,2-dichloroethene generally occurs under iron-reducing to sulfate-reducing conditions. Complete dechlorination to ethene and ethane generally occurs under sulfate-reducing to methanogenic conditions. As presented in **Table 6**, positive ORP and high DO (greater than 2 milligrams per liter [mg/L]) suggest that groundwater conditions at the site are generally aerobic. Low ferrous iron (less than 0.6 mg/L), low methane (less than 2.5 µg/L), and high sulfate (49.3 to 232 mg/L) in all wells further support the observation that conditions are generally aerobic (**Table 6**).

Chloride concentrations ranged from 26 mg/L (MW-08C) to 415 mg/L (MW-13S). TDS ranged from approximately 599 mg/L (MW-20D) to 1,320 mg/L (MW-02). Alkalinity ranged from 227 mg/L (MW-03RC) to 368 mg/L (MW-15S). TOC was generally less than 2 mg/L except for MW-03RC (2.15 mg/L), MW-03RD (7.95 mg/L), MW-08C (6.64 mg/L), and MW-20S (2.11 mg/L).

The only notable difference in general chemistry between Q4-2019 and Q2-2020 is the lower concentrations of sodium, chloride, and TDS in MW-02. This is likely because of the removal of the salt pile that was close to this well during the Q2-2020 groundwater sampling event.

Section 4
Summary

This report presents the results from the Q2-2020 groundwater monitoring event. The Q2-2020 sampling approach will be repeated during subsequent sampling events in 2020. Further analysis and evaluation of these results will be presented in the RI report.

Groundwater flow directions are generally east to west. There are four distinct hydraulic zones in the subsurface: perched, Shallow Aquifer Zone, Deep Aquifer Zone, and Middle Zone. There is a hydraulic separation between the Shallow and Deep Aquifer zones, likely because of the presence of an aquitard. The lateral extent of the perched and middle zones are unclear. Vertical gradients, which are typically strongly downward on-site, dissipate along the east to west groundwater flow path. West of MW-34, vertical head gradients shift upwards, with artesian conditions present in the Deep Aquifer Zone at wells MW-17D and MW-14D, just east of the fault. West of the fault, both the vertical head differences and the distinction between the Shallow and Deep Aquifer zones are not present.

PCE and TCE concentrations were nondetect or below the MCL in MW-05R, MW-06, MW-27, and MW-28, bounding the plume to the east. PCE and TCE concentrations were nondetect or below the MCL in MW-01D, MW-03RD, MW-08C, MW-23C, and MW-25C, providing a possible vertical extent for the PCE plume in these locations. PCE and TCE concentrations were nondetect or below the MCL in MW-12S/D, MW-15S/D, and MW-17S/D, providing a southern plume boundary. The highest concentration of PCE was detected in wells MW-03RB (210 µg/L) and MW-02 (190 µg/L). The highest TCE concentration was observed in MW-14S (4.8 µg/L) (**Figure 4**). Data collected in newly installed or wells planned to be installed in 2020 (CDM Smith 2019c) will further improve the delineation of PCE in groundwater.

Along with VOCs, samples were collected for the determination of general chemistry: ORP, DO, metals, sulfate, nitrate/nitrite, chloride, alkalinity, TOC, ferrous iron, and dissolved gases. These data can be used to determine redox conditions and assess the presence of degradation daughter products to evaluate the potential for biotic and abiotic attenuation. Because of seasonal variations, the same parameters will be analyzed at all wells during sampling events in 2020. These events are anticipated to cover seasonal high and low groundwater elevations to allow for further analysis to be completed and presented in the RI report. Additional data will be collected in 2020, including magnetic susceptibility and ferrous iron minerals (CDM Smith 2019c), which will be used to further evaluate biotic and abiotic attenuation.

Personius, S.F. and W.E. Scott. 2009. Surficial Geologic Map of the Salt Lake City Segment and Parts of Adjacent Segments of the Wasatch Fault Zone, Davis, Salt Lake, and Utah Counties, Utah.

Legend

- Monitoring Well
- Abandoned Monitoring Well
- Drinking Water Supply Well
- Irrigation Well
- Landmark
- Red Butte Creek
- Fault Line

Notes:
(1) Location of University of Utah Well #1 is approximate; well is located less than 100 feet east of Fountain of Ute.

OU = operable unit
PCE = tetrachloroethene
VHA = Veterans Health Administration

Legend

- Monitoring Well
- New Monitoring Well
- Proposed Monitoring Well
- Monitoring Well Transect Line
- Red Butte Creek
- Fault Line

PCE and TCE Concentrations (µg/L)

- = < 5 µg/L
- = 5 - 50 µg/L
- = > 50 µg/L

PCE Contours

- 5 µg/L
- 50 µg/L

Dashed Line - Inferred Extent
? - Extent not Defined

Notes
1. Plume contours were developed using Leapfrog 3-dimensional visualization software to interpolate data from the Q2 2020 groundwater sampling event. The contours represent a top-down view of the 3-dimensional extent of the plume as interpreted in the Leapfrog software.
2. Monitoring wells MW-23 through MW-32 and MW-34 were installed in Q2 2020, however, only MW-23 and MW-25 through MW-28 were ready to be sampled during the Q2 2020 groundwater sampling event.

OU = operable unit
PCE = tetrachloroethene
TCE = trichloroethene
µg/L = micrograms per liter
ft bgs = feet below ground surface
J = Result is estimated
ND = Analyte was not detected

Notes:
[1] Elevations measured using NAVD 88 vertical datum
[2] Direction and magnitude of vertical gradient is calculated between shallow and deep paired wells
*Water level measured using pressure gauge, converted to height above top of casing (head [ft] = pressure [psi] x 2.31)
‡ Water level measured using stand pipe above top of casing
^ Transducer was redeployed at MW-01S (6/18/20 15:05), transducer was malfunctioning at MW-02
† Water level not used in potentiometric surface contours

Acronyms:
amsl = above mean sea level
bgs = below ground surface
btoc = below top of casing
ft = feet
NM = not measured
psi = pounds per square inch

Table 3
Groundwater Sampling Analytes

Analysis	Method	Sample Container	Number of Containers	Preservative
VOCs	EPA Method SW8260C	40 mL VOA	3	HCl to pH < 2, 4°C (±2°C)
1,4-Dioxane	EPA Method SW8270D	1 L amber glass	2	4°C (±2°C)
Dissolved Gasses	EPA Method RSK-175	40 mL VOA	3	HCl to pH < 2, 4°C (±2°C)
Total Metals (unfiltered)	EPA Method SW6020A/SW7470A	250 mL HDPE	1	HNO_3 to pH < 2, 4°C (±2°C)
TDS[1]	EPA Method SM2540C	1 L HDPE	1	4°C (±2°C)
Alkalinity[1]	EPA Method SM2320B	1 L HDPE	1	4°C (±2°C)
Anions (sulfate, chloride)	EPA Method E300.0	125 mL HDPE	1	4°C (±2°C)
TOC	EPA Method SW9060A	250 mL amber glass	1	H_2SO_4 to pH < 2, 4°C (±2°C)
Nitrate and Nitrite as Total Nitrogen	EPA Method SM4500-NO3E	125 mL HDPE	1	H_2SO_4 to pH < 2, 4°C (±2°C)

[1] TDS and Alkalinity are collected in the same container

Notes:
VOC = volatile organic compound
TOC = total organic carbon
TDS = total dissolved solids
Agency
VOA = volatile organic analysis
L = liters
mL = milliliters
HDPE = high density polyethylene
HCl = hydrochloric acid
HNO_3 = nitric acid
H_2SO_4 = sulfuric acid
°C = degrees Celcius

Notes:

[a] Screening level is EPA MCL

[b] Screening level is EPA Tap Water RSL (target cancer risk 1 x 10-6, harzard quotient = 0.1)

Highlight indicates values greater than screening level

Bold indicates detected values

Italics indicates nondetected values

Acronyms:

µg/L = micrograms per liter

MCL = maximum contaminant level

RSL = regional screening level

EPA = U.S. Environmental Protection Agency

Q = qualifier

J = Result is estimated

U = Analyte was not detected at the associated value

Field Forms

Daily Quality Control Report
700 South 1600 East PCE Plume
Salt Lake City, Utah

DATE: 6/16/2020	**Prepared by:** Emilie Rott

Personnel Onsite, including Contractors:	CDM Smith – Emilie Rott CDM Smith – Karla Leslie CDM Smith – Breanna Moak CDM Smith – Maria Day CDM Smith – Kelby Depner Wasatch Environmental – Anna Fiorini
Visitors/Others:	

Weather	Sunny	**Partly Cloudy**	Overcast	Rain	**Snow**
Temperature	85+ º F	70 to 85º F	**50 to 70 º F**	32 to 50 º F	To 32 º F
Wind	Still	**Moderate**	High		
Humidity	Dry	**Moderate**	Humid		

Equipment in Use (field instruments, subcontractor equip, etc.)	• Low flow groundwater sampling equipment

Description of Field Activities – including samples/data collected, etc.:

H&S tailgate was conducted at the IDW yard area.

Water levels collected:

Team conducted a synoptic round of water levels, collecting measurements at each well within the monitoring well network.

Samples collected:

Samples were collected from the following wells:

- MW18-GW061620
- MW19-GW061620

Issues/Problems Encountered/Deficiencies/Deviations from QAPP (and resolutions):

Team attempted to install pressure gauge and sampling spigot on MW-17D on 6/15/2020. While water was freely flowing over the top of the well casing, the water pressure was not great enough to freely flow from the sampling spigot or register on the pressure gauge. On 6/16/2020 a standpipe was purchased and installed at MW-17D. Once the water level in the standpipe stabilized, the water level measurement was recorded. The standpipe in combination with a portable bladder pump will be used to complete low-flow groundwater sampling at this well during this event.

Projected Work – Near Term:

6/17/2020 – Collect groundwater samples

Visitors/Others:	

Weather	Sunny	**Partly Cloudy**	Overcast	Rain	**Snow**
Temperature	85+ º F	70 to 85º F	**50 to 70 º F**	32 to 50 º F	To 32 º F
Wind	Still	**Moderate**	High		
Humidity	Dry	**Moderate**	Humid		

Equipment in Use (field instruments, subcontractor equip, etc.)	• Low flow groundwater sampling equipment

Description of Field Activities – including samples/data collected, etc.:

H&S tailgate was conducted at the IDW yard area.

Samples collected:

Samples were collected from the following wells:

- MW-20S
- MW-20D
- MW-22
- MW-02
- MW-01D

Pump deployment:

Team re-deployed the pump at MW-01S. The team will return to sample the pump in the near future.

Issues/Problems Encountered/Deficiencies/Deviations from QAPP (and resolutions):

The team encountered a similar issue at both MW-19 and MW-02 after minimum purge had been met, and shortly before parameter stabilization. Apparent bladder disconnection had occurred at both wells based on lack of discharge water and frequent surges of air through the discharge line. The team resolved the issues at both wells by pulling the pump, securing the bladder, re-deploying the pump and re-started purging until stabilization was reached.

Projected Work – Near Term:

6/18/2020 – Collect groundwater samples

Humidity	Dry	**Moderate**	Humid		

Equipment in Use (field instruments, subcontractor equip, etc.)	• Low flow groundwater sampling equipment

Description of Field Activities – including samples/data collected, etc.:

H&S tailgate was conducted at the IDW yard area.

Samples collected:

Samples were collected from the following wells:

- MW-22
- MW-13D
- MW-13S
- MW-03RA
- MW-03RB
- MW-03RC
- MW-03RD

Transducer downloads

Team downloaded data from all the transducers located within the monitoring well network. Additionally, the transducer associated with MW-01S was redeployed.

Issues/Problems Encountered/Deficiencies/Deviations from QAPP (and resolutions):

While sampling at MW-13S, an apparent spill of drilling mud occurred due to utility construction in the area (downgradient of the sample location). The construction workers brought in a vacuum truck to remove the spill while the team was filling sample bottles at MW-13S. The team stopped filling bottles and allowed the well to continue purging. Once the work was completed, the team continued sampling.

Projected Work – Near Term:

6/19/2020 – Collect groundwater samples

DATE: 6/19/2020	**Prepared by:** Emilie Rott

Personnel Onsite, including Contractors:	CDM Smith – Emilie Rott CDM Smith – Karla Leslie CDM Smith – Breanna Moak CDM Smith – Maria Day CDM Smith – Whitney Treadway Wasatch Environmental – Anna Fiorini
Visitors/Others:	

Weather	**Sunny**	Partly Cloudy	Overcast	Rain	Snow
Temperature	85+ º F	**70 to 85º F**	50 to 70 º F	32 to 50 º F	To 32 º F
Wind	**Still**	Moderate	High		
Humidity	Dry	**Moderate**	Humid		

Equipment in Use (field instruments, subcontractor equip, etc.)	• Low flow groundwater sampling equipment

Description of Field Activities – including samples/data collected, etc.:

H&S tailgate was conducted at the IDW yard area.

Samples collected:

Samples were collected from the following wells:

- MW-15S
- MW-15D
- MW-12S
- MW-12D
- MW-05R
- MW-25C

Issues/Problems Encountered/Deficiencies/Deviations from QAPP (and resolutions):

The team found a second quick-connect failure on the air line at MW-05R upon arrival. The team pulled the pump and retrieved the tubing. The team then re-deployed the pump and proceeded with purging and sampling.
The team also encountered issues with sampling at MW-25. The team experienced breakthrough at both MW-25a and MW-25b when the purge was flowing at greater than 50 ml/min. Additional troubleshooting indicated that the recharge of the sample system requires 3-4 minutes between discharge cycles. This would result in a very slow sampling rate. After discussion with BESST, the team determined that the slow recharge could be caused by clogging of the filter in the pump or slow recharge from the screened interval, which may require more aggressive development to attempt to increase recharge rate. Further discussion with the VA and USACE next week is requested.

Projected Work – Near Term:

6/20/2020 – K. Leslie to demobilize. The remainder of the team will have a rest day and will resume sampling on 6/21/2020.

Wind	**Still**	Moderate	High		
Humidity	Dry	**Moderate**	Humid		

Equipment in Use (field instruments, subcontractor equip, etc.)	• Low flow groundwater sampling equipment

Description of Field Activities – including samples/data collected, etc.:

H&S tailgate was conducted at the IDW yard area.

Samples collected:

Samples were collected from the following wells:

- MW-16S
- MW-16D
- MW-17S
- MW-17D
- MW-01S
- MW-06
- MW-04
- MW-08A

Issues/Problems Encountered/Deficiencies/Deviations from QAPP (and resolutions):

The resident located at 1123 Alpine Place voiced his frustrations with the team attempting to setup to sample MW-14S/D today. He appeared to be upset that the team was sampling on Sunday near his home and stated that he will be calling the VA to discuss his frustrations with the project. Our team cleaned up their equipment and left the area. We will consider returning to sample after further discussions with the VA.

Projected Work – Near Term:

6/22/2020 – Continue groundwater sampling.

Personnel Onsite, including Contractors:	CDM Smith – Emilie Rott CDM Smith – Breanna Moak CDM Smith – Maria Day CDM Smith – Ben Carreon Wasatch Environmental – Anna Fiorini
Visitors/Others:	

Weather	**Sunny**	Partly Cloudy	Overcast	Rain	Snow
Temperature	**85+ º F**	70 to 85º F	50 to 70 º F	32 to 50 º F	To 32 º F
Wind	**Still**	Moderate	High		
Humidity	Dry	**Moderate**	Humid		

Equipment in Use (field instruments, subcontractor equip, etc.)	• Low flow groundwater sampling equipment

Description of Field Activities – including samples/data collected, etc.:

H&S tailgate was conducted at the IDW yard area.

Samples collected:

Samples were collected from the following wells:

- MW-08B
- MW-08C

Well repairs conducted:

The air and water lines were shortened, duct tape removed, push-to-connect fitting with plug on the water line reinstalled, and an NPT quick-connect fitting was installed on the airline to the following wells:

- MW-23A
- MW-23B
- MW-23C
- MW-26A
- MW-26D
- MW-25A
- MW-25B
- MW-25C

The NPT quick connect fitting for the airline was replaced on the following wells based on the corrosion occurring on the current fittings:

- MW-03RA
- MW-03RB
- MW-03RC
- MW-03RD
- MW-08C

Well tags were added to the following wells:

- MW-23A
- MW-23B

Daily Quality Control Report
700 South 1600 East PCE Plume
Salt Lake City, Utah

- MW-23C
- MW-27

The dedicated pump was installed at the following well:

- MW-27

Projected Work – Near Term:

6/22/2020 –Continue groundwater sampling.

Wind	**Still**	Moderate	High		
Humidity	Dry	**Moderate**	Humid		

Equipment in Use (field instruments, subcontractor equip, etc.)	• Low flow groundwater sampling equipment

Description of Field Activities – including samples/data collected, etc.:

H&S tailgate was conducted at the IDW yard area.

Samples collected:

Samples were collected from the following wells:

- MW-23C
- MW-14S
- MW-14D

Other activities:
The dedicated pump for MW-28 was installed today.

Issues/Problems Encountered/Deficiencies/Deviations from QAPP (and resolutions):

The team also encountered issues with sampling at MW-23. The team experienced breakthrough at both MW-23a and MW-23b. The team saw breakthrough at MW-23a immediately at a very low pressure and discharge time. The team saw breakthrough at MW-23b when the system was purging at greater than 50 ml/min. The team pulled the pump at MW-23b and did not notice any visible defects to the system. The team will return tomorrow to continue troubleshooting.

Projected Work – Near Term:

6/23/2020 –Continue groundwater sampling.

Equipment in Use (field instruments, subcontractor equip, etc.)	• Low flow groundwater sampling equipment

Description of Field Activities – including samples/data collected, etc.:

H&S tailgate was conducted at the IDW yard area.

Samples collected:

Samples were collected from the following wells:

- MW-27
- MW-28

Issues/Problems Encountered/Deficiencies/Deviations from QAPP (and resolutions):

The team continued to troubleshoot sampling at MW-23. The pumps in both MW-23b and MW-23a were pulled up slightly to unseat the pump from the receiver at the top of the screen and to operate the pump in open water. The team experienced similar issues with the pumps operating in the open water as compared to be seated in the pump receiver. The team pulled the pumps from both MW-23b and MW-03Rb to ship back to BESST for troubleshooting.

Projected Work – Near Term:

6/24/2020 – Ship rental equipment back and continue with well repairs as needed.

Salt Lake City, Utah

DATE: 6/25/2020	**Prepared by:** Emilie Rott

Personnel Onsite, including Contractors:	CDM Smith – Emilie Rott CDM Smith – Breanna Moak CDM Smith – Maria Day CDM Smith – Ben Carreon
Visitors/Others:	

Weather	**Sunny**	Partly Cloudy	Overcast	Rain	Snow
Temperature	**85+ º F**	70 to 85º F	50 to 70 º F	32 to 50 º F	To 32 º F
Wind	**Still**	Moderate	High		
Humidity	Dry	**Moderate**	Humid		

Equipment in Use (field instruments, subcontractor equip, etc.)	• Low flow groundwater sampling equipment

Description of Field Activities – including samples/data collected, etc.:

- H&S tailgate was conducted at the IDW yard area.
- Team tested the tubing for MW-23b, as compared to MW-03Rb in the IDW yard area, as requested by BESST. The team used approximately 8 ft of capped 2" casing and filled it with DI water. The team then deployed MW-03rb into the casing and attempted to purge the water in the casing. The pump / tubing functioned properly. The team then attempted to purge the water with the pump and tubing from MW-23b. The system functioned in a similar way that was observed at the wells – sporadic water droplets with breakthrough. The team then removed the tubing from the MW-03Rb and placed the tubing on the pump from MW-23b. The system again only produced air with some water bubbles. The team was able to conclude that the issues occurring at MW-23b were not due to tubing.
- Shipped both pumps and tubing from MW-03Rb and MW-23b to BESST for troubleshooting.
- Added caps and additional labels to the soil vapor monitoring points at the following wells:
  - MW-24
  - MW-25
  - MW-27
  - MW-28

Projected Work – Near Term:

6/26/2020 – Team to demobilize.

Salt Lake City, Utah

Photos:

Date: 6/25/2020

Location: IDW Yard

Description: Team testing the tubing from the pumps pulled from MW-03RB and MW-23B.

Daily Quality Control Report
700 South 1600 East PCE Plume
Salt Lake City, Utah

	Date: 06/25/2020 **Location**: IDW yard **Description**: Team members removed working pump from MW-03RB for troubleshooting purposes. It was tested in the IDW yard and found to have adequate water flow. BESST requested this pump be shipped to them to aid in their troubleshooting of the lack of water flow at new ZIST wells (MW-23, MW-25, MW-26).
	Date: 06/25/2020 **Location**: IDW yard **Description**: Team members removed malfunctioning pump from MW-25B for troubleshooting purposes. It was tested in the IDW yard and found to not have adequate water flow. Visible corrosion can be observed on the filter. BESST requested this pump be shipped to them to aid in their troubleshooting of the lack of water flow at new ZIST wells (MW-23, MW-25, MW-26).

Location Salt Lake City Date June 15, 2020

Project / Client VA / 700 South 1600 East PCE Plume

Weather:
PPE: Modified Level D
Personel: EMMA ROTT, KARLA LESLIE, MARIA DAY, BREANNA MOAK
CDM Smith personell onsite for drilling work: Joe Miller, Whitney Treadway
Wasatch Environmental: Anna Fiorni
Planned activites: ~~Synoptic WLs, GW Sampling~~ ER 6/15/20
Organize equiptment for GW sampling
0800 K. Leslie, E. Rott onsite. Collect supplies to install pressure guage and spigot on MW-17D.
0930 Arrive at MW-17D. Attempt to install pressure guage. Noted that the new guage doesn't fit in casing.
0940 Remove K-packer from well, water level is rising so the well is flowing.
0950 After installing pressure guage no pressure or flow was observed. Determined that the head is not big enough to exceed the height of the guage.

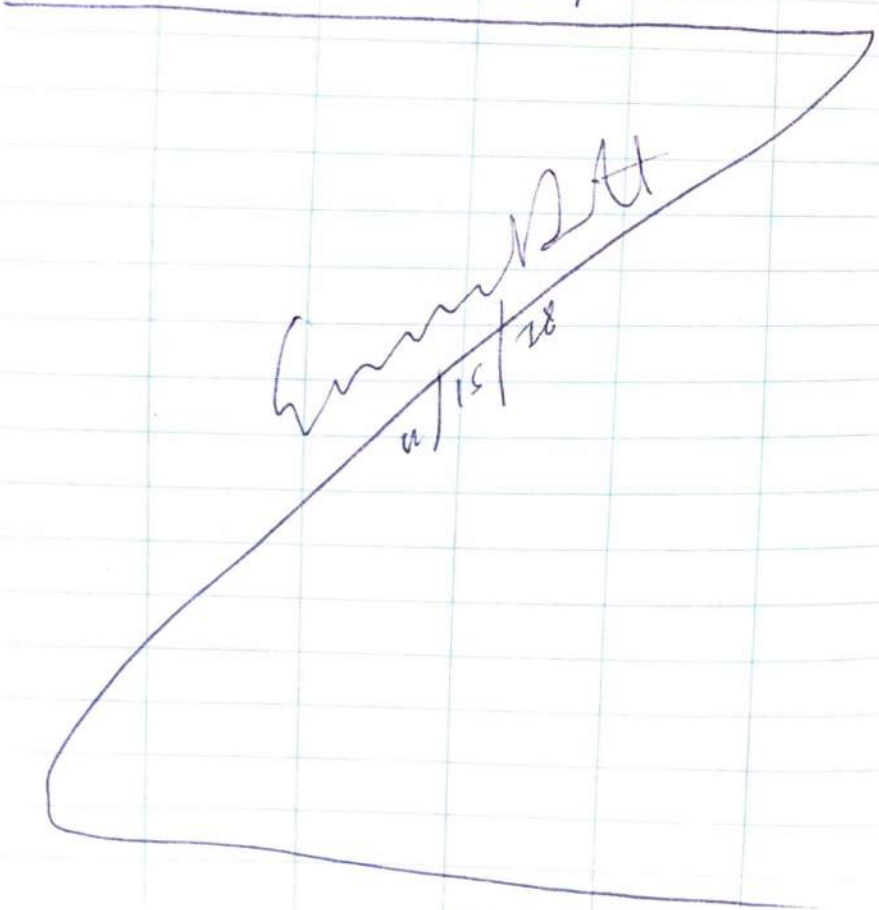
Location Salt lake City Date 6/15/20

Project / Client VA 1700 South 1600 East PCE Plume

1000 Team to Home depot to get supplies for Sampling.

1200 Team to Wasatch to pickup equiptment from Field Environment and the sample bottles.

1400 E. Rott, K. Leslie to hotel to make bottle kits for each well to be sampled.



Location VA Plume SLC Date 6/16/20

Project / Client VA 1700South 1600 East PCE Plume

Weather: Overcast

PPE: Modified level D

Personnel: COM Smith - E. Rott, Kelby Depner, Breanna Moak, Karla Leslie, Mari Day

Wasatch - Anna Fiorni

Planned Activities: Synoptic WL event, GW Sampling

0700 Field team onsite. Health and Safety melting.

0730 Calibrate PIDs and YSIs.

0800 Organize equiptment.

0830 Field team to MW-18 to measure WL and check all WLM against eachother.

0915 Take WL at MW-18, confirm all WLM are all with reason.

0930 E. Rott, B. Moak, M. Day to Badging office. K. Leslie to hotel to pick up package. A. Fiorni, ~~K~~. Depner to continue taking WLs.

1030 K. Leslie, B. Moak to Enterprise to get rental vehicle for Breanna.

1130 E. Rott, M. Day to 21st wells on campus. Pull up pump and let the WL equilibrate, will return in ~1 hour.

Location Salt Lake City Date 6/16/20
Project / Client VA 700 South 1600E PCE Plume

1200 Team to MW-26. Two intervals with no pump are not labeled. Team takes TD measurement to determine which will is which.
1230 K. Leslie to Home Depot to get stand pipe for MW-17.
1235 Team labeled the casing for MW-26
1245 K. Leslie verified that standpipe in combination with portable bladder pump will be used on MW-17D for this event.
1400 E. Rott meets Marc Yalom (VA) to enter construction zone for WL measurements at MW-27+ MW-23.
1415 K. Leslie, B. Moak, M. Day to MW-18 for sampling.
1436 Begin purge at MW-18. E. Rott, K. Depner, A. Forni to MW-18.
1500 E. Rott BACK to MW-27/23 area to meet M. Yalom (VA) for water level measurements of MW-23 2ist wells after letting them equilibrate.

Location Salt Lake City Date 6/16/20
Project / Client VA / 700S 1600E PCE Plume

1508 Collect MW18-GW061620
1530 Team moves to MW-19
1614 Begin purge at MW-19.
1645 Well begins to produce only air from effluent discharge line. Team pulls pump to inspect. Noted that bladder may have been loose. Redeployed and began purge again.
1725 Decision to sample at MW-19 although turbidity is not ±10% or <10 NTU. Decision made because turbidity increased due to pump removal. Team purged much more than min purge (~4 gal).
~~1800 Team +~~ QR 6/16/20
1728 Collect MW19-GW061620

1800 Field team offsite.

Date 6/25/20

Weather: Sunny, 90°F
PPE: Modified Level D
Task: Well repairs, ship equiptment from GW event
Personell: E. Rott, B. Carreon

0700 Team onsite. H+S meeting at tailgate

0730 Team begins to organize equiptment to ship back to Field Environmental

0930 Team to troubleshoot & test tubing from MW-23b:
Put together ~8 ft of 2" casing and capped it. filled w/ DI water.
Placed Pump from MW03Rb inside
Connected to MP50. Set at 15 psi, 3 CPM, 10 on/10 off.
Saw clear flow instantly.
Stop. Remove MW03Rb from casing.
Place MW23b pump in casing.
Start using same settings.
Sporadic air/water through line, no solid stream. Similar to what was seen at the well.
Stop, remove tubing from MW03Rb pump. Place on 23b pump.

Location SLC VA

Project / Client VA 700S 1600E PCE Plume

Date 6/25/20

(cont) Place pump back in casing. Start cycles. Observe same air/water through line, no solid stream. Assume tubing not causing the issue.

1040 Team packs pumps/tubing for shipment back to BESST.

1100 Team to MW03Rb. Place cap on B interval.

1105 Team to MW24. Reliable soil moisture tubing. Place caps on lines

1110 Team to MW23b. Place cap.
Team to MW27. Placed caps on soil gas lines. Ran out of swagelocks left 2 deepest intervals unapped

1130 Team to Fedex to ship equiptment/pump + tubing.

1230 Team to MW28, MW06, MW04, MW17 and MW14D to determine bolt size for replacement tamperproof bolts.

1400 Team offsite.

PREPARATORY INSPECTION/MOBILIZATION CHECKLIST

Activity: Groundwater Sampling **Date:** 6/16/20

Answer each question by checking the appropriate column (yes, no, not observed [N/O] or not applicable [N/A]). If "no" is checked, provide an explanation on the form.

Activity	Yes	No	N/O	N/A	Remarks
1. Have copies of all work plans, including the health and safety plan, been printed for availability onsite? Have appropriate copies of all forms in the plans been prepared for site use?	✓				
2. Have pertinent work plans and requirements been explained to project personnel, including project documentation and recordkeeping requirements?	✓				FPM on 6/11/2020
3. Have all personnel working onsite read over the health and safety plan provided by CDM Smith (acknowledgement is by signing the health and safety plan signature form from the SSHP)?	✓				
4. Are the required materials, supplies, and equipment available, on-hand, in working order, and in accordance with plans and technical specifications?				✓	Will check equiptment onsite
5. Have all applicable Safety Data Sheets been made available at the site?	✓				
6. Has all equipment been properly calibrated per manufacturer's requirements?				✓	Will check onsite
7. Have sample locations been marked out using a GPS unit or by a surveyor, as appropriate?	✓				
8. Have all applicable permits, licenses, and certificates been identified and/or obtained?	✓				
9. Have all utilities been marked out prior to the start of activities?				✓	
10. Does the subcontractor need to clear heavy underbrush or any overhead obstructions to access any locations?		✓			
11. Was all subcontractor equipment thoroughly checked, including inspection and testing of the emergency shutdown button on the drilling rig, generators, etc.?				✓	
12. Have the necessary laboratories been contracted to perform the requested analyses?	✓				
13. Has a designated staging area been established to store IDW and hold the decontamination pad?	✓				
14. For sample locations not in public right-of-way, have all appropriate access agreements ben obtained?	✓				
15. For existing wells, have keys been obtained?	✓				

FIELD DOCUMENTATION CHECKLIST

Activity: Groundwater Sampling **Date:** 6/16/20

Answer each question by checking the appropriate column (yes, no, or not applicable [N/A]). If "no" or "N/A" are checked, provide an explanation in the comments section.

Field Documentation	Yes	No	N/A
1. Was all original field data recorded in indelible ink?	✓		
2. Were log books and field forms (including DQCRs) filled out properly, accurately recounting the day's events? This includes documenting activities performed, weather conditions, personal protective equipment used, problems encountered, details of samples collected, site visitors, descriptions of photos taken, notes of conversations with Project Manager/Field Team Leader/Project Geologist, decontamination procedures used, etc.	✓		
3. Were deficiencies reported to the Project Manager?	✓		
4. Were the equipment arrival date, equipment type, onsite storage location, and serial number recorded on the log for each field instrument?	✓		
5. Were factory calibration certificates received with the field instruments and recorded on the log?	✓	✓	
6. Are instruments being calibrated before and after use when necessary, and against know standards and/or per manufacturer specifications? (Passing calibration is within 10% of the standard.)	✓		
7. Are all instrument calibrations being accurately documented on the appropriate logs, including frequency of calibration checks, calibration acceptance criteria, and corrective actions for calibration failures?	✓		
8. Was the date that the field instrument left the site recorded in the logbook or on the instrument's log?	✓		
9. Was all IDW segregated by matrix/type to facilitate analysis and disposal? Were all IDW containers properly labeled as required in the QAPP?	✓		

Comments and Corrective Actions

List all corrective actions. Initial and date when corrective actions have been implemented.

Not all calibration certificates were recieved from Field Environmental. Those that were were scanned and documented.

The Field Team Leader and Project Manager shall sign this checklist upon completion of all items on the checklist.

Field Team Leader: Emma Rat Date 6/16/20

Project Manager: _____ Date _____

WATER LEVEL AND MONITORING WELL SAMPLING CHECKLIST

Activity: Synoptic water level measurements + Groundwater sampling **Date:** 6/16/20

Answer each question by checking the appropriate column (yes, no, or not applicable [N/A]). If "no" or "N/A" are checked, provide an explanation in the comments section.

Synoptic Water Level Measurements	**Yes**	**No**	**N/A**
1. Were synoptic water level measurements collected prior to each groundwater sampling event, with all measurements for the event collected within the required 24-hour period?	✓		
Monitoring Well Sampling Procedures			
2. Was sampling equipment appropriate for the purpose and site conditions?	✓		
3. Were new protective gloves worn between sampling locations and/or intervals?	✓		
4. Was sampling equipment decontaminated between each location and/or sampling intervals, or dedicated/disposable equipment used?	✓		
5. Was the correct technique/method used to purge each well prior to sample collection?	✓		
6. If using a submersible pump, was the depth to which the pump was lowered recorded in the logbook or field form?			✓
7. Was low-flow sampling conducted in accordance with the approved UFP-QAPP and SOP?	✓		
8. Were field water quality monitoring instruments (e.g., YSI) calibrated per the UFP-QAPP?	✓		
9. Was a steady pumping rate reached and maintained so that total drawdown in the well was < 0.3 feet; or was the pump kept at a flow rate between 200 to 500 mL per minute?	✓		
10. Were wells purged until parameters stabilized before collecting samples?	✓		
11. Were purge parameters recorded in the logbook or on the well sampling form?	✓		
12. Was the purge line disconnected from the flow-through cell prior to sample collection and the flow rate < 250 mL per minute?	✓		
13. Were the bottles pre-preserved as required in the UFP-QAPP?	✓		
14. Were bottles adequately protected prior to sample collection to prevent cross-contamination?	✓		
15. Was headspace in sample containers for volatiles eliminated?	✓		
16. Were the appropriate QA/QC samples collected (duplicates, rinsate blanks, MS/MSD)?	✓		
17. Were sample containers filled in the correct order – VOCs, hydrocarbons, metals, geochemical parameters?	✓		
18. Was purge water properly containerized as IDW?	✓		
Sample Shipment			
19. Was the following information recorded on each sample label and in the logbook and/or field form – sample ID (including sample depth interval), location, analysis, date, time, preservative, sampler initials, and any other relevant information?	✓		
20. Were adhesive labels placed on each sample using indelible ink, or covered with clear tape?	✓		
21. Were duplicate samples labeled such that they would be "blind" to the laboratory?	✓		

Sample Shipment (continued)	Yes	No	N/A
22. Were MS/MSD samples noted in the logbook/field form and on the COC?	✓		
23. Were the COCs properly filled out, readable, and signed?	✓		
24. Were the sample coolers properly packed, including ice, trip blank (if appropriate), temperature blank, and a COC unique to the cooler?	✓		
25. Were copies of the COCs retained by field personnel?	✓		
26. Were custody seals signed, dated, and placed on each cooler prior to shipment?	✓		
27. Were the coolers shipped priority overnight for next day delivery to the laboratory?	✓		

Comments and Corrective Actions

List all corrective actions. Initial and date when corrective actions have been implemented.

The Field Team Leader and Project Manager shall sign this checklist upon completion of all items on the checklist.

Field Team Leader: Emma Rat Date 6/19/20

Project Manager: _____ Date _____

DECONTAMINATION CHECKLIST

Activity: Groundwater Sampling **Date:** 6/26/20

Answer each question by checking the appropriate column (yes, no, not observed [N/O] or not applicable [N/A]). If "no" is checked, provide an explanation on the form.

Equipment	**Yes**	**No**	**N/O**	**N/A**
1. Was the decontamination pad constructed onsite per the UFP-QAPP?	✓			
2. Was all sampling equipment decontaminated properly prior to use and between sample intervals?	✓			
3. Was each decontamination event recorded in the log book?	✓			
4. Was clean equipment stored separately from non-decontaminated equipment?	✓			
5. Was phosphate-free detergent and/or steam cleaning used?	✓			
6. Was IDW handled in accordance with the approved work plan?	✓			

Comments and Corrective Actions

Initial and date when corrective actions have been implemented.

The Field Team Leader and Project Manager shall sign this checklist upon completion of all items on the checklist.

GROUNDWATER MONITORING WELL
LOW-FLOW SAMPLING DATA SHEET

Site Name: 700S 1600E PCE Plume **Date:** June 17, 2020 **OVM:** FID ☐ PID ■ **In Casing (ppm): (Initial)** 0 **(Vented to)** 0

Well ID: MW-01D **Purging/Sampling Device:** Compressed gas/MP-10H **Pump depth (ft bgs):** 384

Initial Static Water Level (feet btoc): 170.35 **Analytical Parameters:** VOCs, Metals, Mercury, Anions, TDS/Alkalinity, Nitrate/Nitrite, TOC, MEEA, 1,4-D-oxane

Final Water Level (feet btoc): 170.37 **QC Samples Collected:** None

Purge Start Time: 1508 **Ferrous Iron (mg/L):** 0.06 **Allowable Drawdown (ft):** 0.3

Sample Time: 1625 **Controller Settings: Recharge:** 8 secs **Discharge:** 22 secs **Pressure:** 200 psi

Samplers' Signatures: Kaela Vesi Ame Fain **Cycles Per Minute:** 2

Time	Water Level (ft btoc)	Temperature (Degrees C)	pH	Specific Cond. (µs/cm)	Dissolved Oxygen (mg/L)	ORP (mV)	Turbidity (NTU)	Flow Rate (mL/min)	Comments
1555	170.33	14.7	6.94	1091	7.29	114.8	0.08		purged 3 gal. already
1605	170.33	15.0	6.94	1086	5.55	115.2	0.09	200	minimum purge met
1610	170.36	14.3	6.92	1087	5.79	117.2	0.39	225	
1615	170.36	14.0	6.92	1085	5.77	118.5	1.07	225	
1620	170.36	14.3	6.95	1083	5.62	117.3	0.77	225	
1625									started sampling
									total purge = 5 gal.

Casing Volume Calculations:
Water Col. X Casing Factor = Gallons per Casing Volume
Casing Factors: 2" diameter well: 0.16 / 4" diameter well: 0.65 / 6" diameter well: 1.47

Previous controller settings: Recharge: 8 secs **Discharge:** 22 secs
Pressure: 220 psi **Cycles Per Minute:** 2 **Flow Rate:** 200 mL/min

Screened Interval: 364-404 ft bgs **Minimum purge volume:** ~~6.5~~ 3.1 gallons

Purge calculated w/ 3/8" tubing
Well has 1/4" tubing, min purge recalculated

PARAMETERS FOR WATER QUALITY STABILIZATION

Temperature	±1°C	DO	±10% OR ±0.2mg/L (whichever is greater)
pH	±0.1 pH unit		
Specific Cond	±3%		
ORP	±10mV	Turbidity	< 50 NTU and ±10% OR < 10 NTU
Water Level	± 0.3 foot		

Note: Simultaneous purge allowed

6/23/20

Troubleshooting at MW-23A recharge cycles

1) Blow line out w/settings: ~~10 60~~ 20 ON, 60 OFF, 95 PSI

2) Purged 90 mL, no signs of recharge

3) Start at 10 on, 120 off @ 10 psi, wait 3 cycles

~~23B~~ QR 6/23/20

~~Attempted sample at B, slowly increase flow rate to 50 mL/min~~ QR 6/23/20

6/24/20

1022 — WL = 186.58

1025 - start at 40 psi 20 on ~~PSI~~ 40 off, breakthrough immediately. test recharge cycle ~120s for recharge

1046 — WL = 186.59 Start at 40 psi, 10 on 50 off

1046 — increase to 50 psi, change to 20 on, 40 off WL = 186.60 discharge has mainly air, some water

1100 — determined breakthrough. Team to stop troubleshooting, no sample collected.

Casing Volume Calculations:
Water Col. X Casing Factor = Gallons per Casing Volume
Casing Factors: 2" diameter well: 0.16 / 4" diameter well: 0.65 / 6" diameter well: 1.47

Previous controller settings: Recharge: _____ secs **Discharge:** _____ secs

Pressure: _____ psi **Cycles Per Minute:** _____ **Flow Rate:** _____ mL/min

Screened Interval: 250-260 ft bgs **Minimum purge volume:** ~~4.3~~ 0.9 gallons KC 6/10/2020

PARAMETERS FOR WATER QUALITY STABILIZATION

Temperature	±1°C	DO	±10% OR ±0.2mg/L (whichever is greater)
pH	±0.1 pH unit		
Specific Cond	±3%		
ORP	±10mV	Turbidity	< 50 NTU and ±10% OR < 10 NTU
Water Level	± 0.3 foot		

see reverse for notes

- Breakthrough after ~ 0.25 gal

Start recharge test on MW23B → DTW on 6/16 = 196.60'
∴ ~85 psi needed

1150 start at 30 psi, 10 on, 120 off
1159 increase to 40 psi, 10 on 120 off
1205 Increase to 50 psi, 10 on 120 off
1212 Increase to 60 psi, 10 on 120 off
1217 Increase to 70 psi, 10 on 120 off
1223 Increase to 80 psi, 10 on 120 off
1229 Increase to 90 psi, 10 on 120 off
1235 Increase to 100 psi, 10 on 120 off
1241 Increase to 110 psi, 10 on 120 off, seeing water bubbles / air in discharge line.
1250 Increase to 120 psi, 10 on 120 off
1256 Increase to 130 psi, 10 on 120 off water flowing; ~ 30 ml per discharge
1310 Increase to 130 psi, 20 on 120 off water flow ~ 80 ml / discharge
1312 Conduct recharge test, ~124 seconds

Restart purge → plan to collect VOCs from water that has re-filled in the line.

1510 Start at 40 psi, 10 on 120 off water bubbles + air cycling through likely did not recharge enough.
1520 No water, only air. Did not give the system long enough to recharge (~ 2 hours)
1545 Pull pump
1547 WL = 197.42

PARAMETERS FOR WATER QUALITY STABILIZATION

Temperature	± 1° C	DO	± 10 %
pH	± 0.1 pH unit	ORP	± 10mV
Conductivity	± 10 %	Water Level	± 0.1 foot
		Turbidity	< 50 NTU

Ferrous Iron (mg/L): _____

Notes

0830 Team pulls pump ~ 1 ft above the ZIST seeting. Will try and sample with pump slightly lifted to monitor drawdown → can show if pump is malfunctioning or low recharge

0858 WL = ~~197.25'~~ 196.25' per 6/24/20

0900 Start at 30 psi, 10 on 120 off WL = 196.36

0910 Increase to 40 psi, 10 on 120 off WL = 196.41

0917 Increase to 50 psi, 10 on 120 off WL = 196.45

0923 Increase to 60 psi, 10 on 120 off WL = 196.44.
→ noted that water bubbles in discharge line

0930 Increase to 70 psi, 10 on 120 off WL = 196.45
→ bubbles continue in discharge line

0937 Increase to 80 psi, 10 on 120 off WL = 196.52

0946 Increase to 90 psi, 10 on 120 off WL = 196.50

0955 Leave at 90 psi, change to 15 on, 120 off

1004 Increase to 100psi, change to 20 on 40 off WL = 196.46

1010 Increase discharge to 120 on to see if water comes out

1012 Water discharged ~ 5 seconds solid stream, then apparent breakthrough. WL = 196.57

1400 Team did not collect sample. Removed pump and will send to BESST for trouble shooting

NOTICE: Turn-around-time (TAT) for samples shall not begin until all discrepancies have been resolved. For samples received and discrepancies resolved after 1500 hrs, TAT shall start at 0800 hrs the next business day. The client is responsible for all cost associated with sample disposal. Samples shall be disposed of as soon as practical (but not prior to fifteen (15) calendar days) after issuance of analytical report unless a different sample disposal schedule is pre-arranged with EMAX. Disposal fee for samples defined by CA Title 22 as non-hazardous shall be $5.00 per sample. EMAX will return hazardous samples to the client at the client's expense unless directed in writing otherwise.

Section 1

Data Usability and Assessment Review

Under the U.S. Army Corps of Engineers (USACE), Kansas City District, Contract No. W912DQ-18-D-3008, Task Order No. W912DQ19F3048, CDM Federal Programs Corporation (CDM Smith) was directed to perform a remedial investigation (RI) for Operable Unit (OU) 1 of the 700 South 1600 East Tetrachloroethene (PCE) Plume Superfund Site (Site) in Salt Lake City, Utah. To assist in the ongoing RI at the Site, groundwater samples were collected from June 16 through 24, 2020 and shipped to EMAX Laboratories, Inc. in Torrance, California for sample analysis.

The purpose of this quality control summary report (QCSR) is to summarize the data validation and determine whether the sample results meet the data quality objective (DQO) of data usability outlined in the *Quality Assurance Project Plan, 700 South 1600 East PCE Plume Site, Operable Unit 2, Salt Lake City, Utah, U.S. Army Corps of Engineers Kansas City District, Department of Veterans Affairs Veterans Health Administration Salt Lake City Health Care System, November 2019 (QAPP)* (CDM Smith 2019).

1.1 Usability Summary

Data collected during this field investigation and validated for this QCSR are usable as reported. Applicable data validation qualifiers were added if required. No sample results were rejected. Specific details are provided in the validation reports presented in Section 5 and **Attachment 1** of this report. A summary of the validation is presented in the following sections.

Section 2
Quality Assurance Objectives

Quality assurance (QA) objectives for measurement data are expressed in terms of precision, accuracy, representativeness, comparability, completeness, and sensitivity (PARCCS). The QA objectives provide a mechanism for ongoing quality control (QC) and evaluating and measuring data quality throughout the project.

A review of the collected data is necessary to determine if data measurement objectives established in the QAPP (CDM Smith 2019) have been met. In general, the following data measurement objectives were considered:

- Achievement of analytical method and reporting limit (RL) requirements
- Adherence to and achievement of appropriate laboratory analytical QC requirements
- Achievement of required measurement performance criteria for data quality indicators (DQIs) PARCCS
- Adherence to sampling and sample handling procedures
- Adherence to the sampling design and deviations documented on field change notifications if required

The data validation review of the QA objectives verifies that the collected data are of sufficient quality to support their intended use.

Section 3
Field and Laboratory Quality Assurance Activities

CDM Smith completed field sampling activities between June 16 and 24, 2020. A summary of the number of samples collected and the date on which the sampling event occurred follows:

EMAX SDG 20F154 – Groundwater – June 17, 2020
3 samples
1 field duplicate sample
3 trip blank samples
EMAX SDG 20F155 – Groundwater – June 16 and 17, 2020
2 samples
1 trip blank sample
EMAX SDG 20F162 – Groundwater – June 17 and 18, 2020
8 samples
4 trip blank samples
EMAX SDG 20F178 – Groundwater – June 18 and 19, 2020
7 samples
1 field duplicate sample
4 trip blank samples
EMAX SDG 20F179 – Groundwater – June 17 and 18, 2020
4 equipment blank samples
1 trip blank sample
EMAX SDG 20F183 – Groundwater - June 21 and 22, 2020
10 samples
2 field duplicate samples
1 equipment blank sample
4 trip blank samples
EMAX SDG 20F210 – Groundwater – June 23 and 24, 2020
5 samples
1 field blank sample
3 trip blank samples

SDG – sample delivery group

All samples were received intact with proper chain-of-custody (COC) documentation at EMAX Laboratories, Inc.. Sample identification was accurately documented, with the exception of sample TB46-GW061720. The COC form submitted to the laboratory indicated a sample identifier of TB42-GW061720, but the accompanying sample bottle indicated an identifier of TB46-GW061720. The laboratory subsequently contacted CDM Smith and the proper sample identifier (TB46-GW061720) was established.

Table 3-1 presents a list of the samples collected and the analyses performed. **Attachment 2** presents the completeness check review of the data packages. **Attachment 3** includes the analytical data packages.

Sample preparation and analyses were conducted within the method-specified holding times.

The QAPP (CDM Smith 2019) defined the procedures to be followed and the data quality requirements for the field sampling events.

3.1 Deviations from Field Procedures

No deviations from field procedures were encountered during these sampling investigations and the DQOs were met for samples that were collected during the June 2020 sampling event.

3.2 Field Quality Assurance/Quality Control

Four field duplicate pairs were collected for the groundwater samples. The QC sample collection frequency requirement in the QAPP (CDM Smith 2019) (10 percent [%]) has been met.

One field blank and five equipment blank samples were collected. Trip blanks were submitted with each cooler sent to the laboratory, for a total of 20 trip blank samples.

Field QA/QC objectives were accomplished through the use of appropriate sampling techniques and collection of the required QC samples at the required frequencies.

3.3 Laboratory Quality Assurance/Quality Control

Analytical QA/QC was assessed by laboratory QC checks, method blanks, sample custody tracking, sample preservation, adherence to holding times, laboratory control samples (LCSs), matrix spike (MS) samples, calibration recoveries, inductively coupled plasma (ICP) interference checks, and other applicable QC parameters. As presented in the data validation reports in **Attachment 1** of this report, the laboratory QC sample criteria met project requirements with the appropriate qualifiers applied. All data are considered usable.

3.3.1 Laboratory Methods

Samples were analyzed using the following United States Environmental Protection Agency (EPA) or Standard Methods (SM):

Groundwater

- EPA Method SW8260C – Volatile Organic Compounds (VOCs)
- EPA Method SW8270D SIM – Semivolatile Organic Compounds – Selective Ion Monitoring (SVOCs – 1,4-Dioxane)
- EPA Method SW6020A – Metals
- EPA Method SW7470A – Mercury
- Method RSK-175 – Dissolved Gases (Ethane, Ethene, Methane)

- EPA Method E300.0 – Chloride, Sulfate
- Method SM2320B – Total Alkalinity
- Method SM2540C – Total Dissolved Solids
- Method SM4500-NO3E – Nitrogen, Nitrate-Nitrite
- EPA Method SW9060 – Total Organic Carbon
- The methods used met project objectives.

Section 4
Data Validation Procedures

For this QCSR, there were seven laboratory SDGs. Data reported in the seven SDGs were validated and reviewed by qualified CDM Smith data validators not associated with project sampling activities. Data validation was performed in accordance with specified analytical methods and performance criteria outlined in the QAPP (CDM Smith 2019) and in the EPA *National Functional Guidelines for Inorganic Superfund Methods Data Review* (2017) and EPA *National Functional Guidelines for Organic Superfund Methods Data Review* (2017). Validation reports were prepared and are presented in **Attachment 1**. The following SDG data packages were validated:

- EMAX – SDG 20F154
- EMAX – SDG 20F155
- EMAX – SDG 20F162
- EMAX – SDG 20F178
- EMAX – SDG 20F179
- EMAX – SDG 20F183
- EMAX – SDG 20F210

Table 4-1 presents the results that were qualified and the reason for qualification. Qualifiers applied are defined as follows:

- J – The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample.
- J- – The result is an estimated quantity. The associated numerical value is the approximate concentration of the analyte in the sample and may be biased low.
- U – The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit.
- UJ – The analyte was analyzed for, but was not detected above the level of the reported sample quantitation limit. The reported quantitation limit is approximate.

Table 4-1
Qualification Summary

Field Sample ID	Method	Analyte	CAS #	Final Result	Unit	Validation Qualifier	Interpreted Qualfier	Qualifier Reason
EB01-GW062120	SW8260C	Chloroethane	75-00-3	1	µg/L	UJ	UJ	CCV

Acronyms:

ID - identification
SW8260C - volatile organic compounds
SW6020A - metals
E300.0 - chloride, sulfate
µg/L - micrograms per liter
mg/L - milligrams per liter
CAS - Chemical Abstract Service
U - not detected
J - estimated
J- - estimated; biased low
RL - reporting limit
U-RL - result is qualified as nondetect at the reporting limit value
MS - matrix spike criteria
LCS - laboratory control spike criteria
FD - field duplicate criteria
LB - laboratory blank criteria (includes ICB and CCB required actions)
CCB - continuing calibration criteria
CCV - continuing calibration verification criteria

Section 5
Data Quality Indicators

This section summarizes the validation performed and the overall quality of the data based on the PARCCS parameters. The validation reports are provided in **Attachment 1**.

Achievement of the DQO regarding data usability was determined by the use of DQIs. These DQIs for measurement data are expressed in terms of PARCCS. The DQIs provide a mechanism for ongoing control to evaluate and measure data quality throughout the project. These criteria are defined in **Table 5-1** and in the subsections below.

5.1 Precision

Precision is a quantitative term that estimates the reproducibility of a set of replicate measurements under a given set of conditions. It is defined as a measurement of mutual agreement between measurements of the same property and is expressed in terms of relative percent difference (RPD) between duplicate determinations.

RPD is calculated as follows:

$$\mathbf{RPD = absolute\ value\ [(C1 - C2)/\{(C1 + C2)/2)\}] \times 100\%}$$

Where:

C1 = concentration of primary sample
C2 = concentration of duplicate sample

Field and analytical precision were determined from review of the field duplicate results, MS/matrix spike duplicates (MSDs), LCS/laboratory control sample duplicate (LCSDs) and laboratory duplicates. The duplicate sample results were compared after calculating their RPDs. Field duplicate samples were collected in the same manner as the original samples but collected in separate, individual containers; given separate sample identifiers; and treated as unique samples by the laboratory.

Table 5-2 presents the field duplicate sample results. A control limit of 30% RPD was used for the groundwater field duplicate samples when both sample concentrations were greater than 5x the reporting limit (RL). If the sample concentrations were below 5x the RL, then the absolute difference between the samples is calculated and if that value is below the RL than no qualification is required. Laboratory RPDs are specific to the QC parameter. RPD results are summarized below:

- Field duplicate RPDs were within control limits except for sulfate in field duplicate pair MSW01S-GW062120/FD01-GW062120 and MW20D-GW061720/FD04-GW061720, which had RPDs of 71 and 32%, respectively. The sulfate results for these four samples were qualified as estimated "J." The acetone results for the field duplicate pair MW08B-

GW062220/FD02-GW06210 had one detect and one nondetect result. The absolute difference between the results was less than the RL so no qualification was required.

- Laboratory duplicate sample RPDs were within the control limits.
- LCS/LCSD RPDs were within control limits.
- MS/MSD RPD results were within control limits with the exception of vinyl acetate in SDG 20F183, which had an RPD of 21%. Qualification for MS/MSD RPDs outside of criteria is only required for detected results. The vinyl acetate result reported in the initial sample MW08A-GW062120 was nondetect, therefore no qualification was required.

No field or laboratory issues were identified from the RPD results that were outside of criteria, and the exceedances are reasonable for this type of sampling activity.

5.2 Accuracy

Accuracy is the degree of agreement of a measurement with an accepted reference or true value and is a measure of the bias in a system. Two different metrics are evaluated to assess result accuracy—calculation of percent recovery (%R) for spiked analytes with known concentrations and review of blank results for cross-contamination.

5.2.1 Percent Recovery

Accuracy of the data was assessed by comparing LCS and MS recovery, calibration recovery, surrogate recovery, internal standard recovery and by performing ICP interference checks and serial dilutions during metals analyses. Accuracy is expressed as %R, which was calculated by:

$$\textbf{Percent Recovery} = \frac{\textbf{(Total Analyte Found – Analyte Originally Present)} \times \textbf{100}}{\textbf{Analyte Added}}$$

Analytical accuracy for the entire data collection activity is difficult to measure because several sources of error exist. Errors can be introduced by any of the following:

- Sampling procedure and duration of sampling
- Field contamination
- Sample preservation and handling
- Sample matrix
- Sample preparation
- Analytical techniques

Accuracy is maintained by adhering to the laboratory method and approved field and analytical standard operating procedures.

A summary of the accuracy parameters reviewed and the resulting qualifications for the data collected follows:

SDG 20F154

- LCS/LCSD %Rs were within criteria.
- MS/MSD %Rs were within criteria except for tetrachloroethene. The tetrachloroethene result was qualified as estimated "J" in the MS parent sample MW02-GW061720 (320/320%). The TCE result was qualified as estimated "J" in the MS parent sample MW02-GW061720.
- The sulfate MSD result was below criteria at 84%R. Associated sample results were qualified as estimated biased low "J-/UJ."
- The initial and continuing calibration verifications were within criteria.
- Surrogate results were within criteria.
- ICP interference checks were within criteria.
- Inductively coupled plasma mass spectrometry (ICP-MS) tune results were within criteria.
- Internal standard results were within criteria.
- ICP serial dilution results were within criteria.

SDG 20F155 and 20F162

- LCS/LCSD %Rs were within criteria.
- MS/MSD %Rs were within criteria.
- The initial and continuing calibration verifications were within criteria.
- Surrogate results were within criteria.
- ICP interference checks were within criteria.
- ICP-MS tune results were within criteria.
- Internal standard results were within criteria.
- ICP serial dilution results were within criteria.

SDG 20F178

- LCS/LCSD %Rs were within criteria.
- MS/MSD %Rs were within criteria.
- The initial and continuing calibration verifications were within criteria except for chloroethane with a %R of -25.5%. Chloroethane sample results were qualified as estimated "J/UJ."
- Surrogate results were within criteria.

- ICP interference checks were within criteria.
- ICP-MS tune results were within criteria.
- Internal standard results were within criteria.
- ICP serial dilution results were within criteria.

SDG 20F179

- LCS/LCSD %Rs were within criteria.
- The initial and continuing calibration verifications were within criteria.
- Surrogate results were within criteria.
- ICP-MS tune results were within criteria.
- Internal standard results were within criteria.

SDG 20F183

- LCS/LCSD %Rs were within criteria.
- MS/MSD %Rs were within criteria except for calcium (200/200%), magnesium (140%), and sodium (170/160%). Initial sample concentrations were greater than 4x the spike level so no qualifications were required.
- The initial and continuing calibration verifications were within criteria except for chloroethane, with a %R of -25.5%. Chloroethane sample results were qualified as estimated "J/UJ."
- Surrogate results were within criteria.
- ICP interference checks were within criteria.
- ICP-MS tune results were within criteria.
- Internal standard results were within criteria.
- ICP serial dilution results were within criteria.

SDG 20F210

- LCS/LCSD %Rs were within criteria.
- MS/MSD %Rs were within criteria except for magnesium (53%) and calcium (0 /-33%). Initial sample concentrations were greater than 4x the spike level so no qualifications were required.
- The initial and continuing calibration verifications were within criteria.
- Surrogate results were within criteria.

- ICP interference checks were within criteria.
- ICP-MS tune results were within criteria.
- Internal standard results were within criteria.
- ICP serial dilution results were within criteria.

Sample preservation, handling, and holding times are additional measures of accuracy of the data. Samples were analyzed within the appropriate holding times. Cooler temperatures were within criteria and sample handling information was acceptable.

5.2.2 Blank Contamination

Blanks are used to determine the level of laboratory and field contamination introduced into the samples, independent of the level of target analytes found in the sample source. Sources of sample contamination can include the containers and equipment used to collect the sample, preservatives added to the sample, other samples in transport coolers and laboratory sample storage refrigerators, standards and solutions used to calibrate instruments, glassware and reagents used to process samples, airborne contamination in the laboratory preparation area, and the analytical instrument sample introduction equipment. Each analyte group has its own particular suite of common laboratory contaminants. Active measures must be performed to continually measure the ambient contamination level and steps taken to discover the source of the contamination to eliminate or minimize the levels. Random spot contamination can also occur from analytes that are not common laboratory problems but can arise as a problem for a specific project or over a short period. Field blanks, equipment blanks, trip blanks, and laboratory method blanks are analyzed to identify possible sources of contamination.

For this project, one field blank sample was collected to assess potential ambient background cross-contamination of sampled media. Five equipment blank samples were collected to assess potential cross contamination introduced by the dedicated sampling equipment. Twenty trip blank samples were sent with the coolers to assess potential cooler transportation cross contamination. Results for the field, equipment and trip blank samples were nondetect. The following discusses validation actions required as a result of laboratory blank contamination.

SDG 20F154

- Lead, manganese, and sodium were detected in some of the laboratory blank samples. Associated results required no qualification as sample results were either nondetect or greater than the RL.

SDG 20F155

- Calcium, sodium, and vanadium were detected in the some of the laboratory blank samples. Associated results required no qualification as all sample results were greater than the RL.

SDG 20F162

- Lead, manganese, sodium, and mercury were detected in some of the laboratory blank samples. Applicable sample results for manganese and lead were qualified as nondetect “U”

at the RL. All other detected analytes did not require qualification as sample results were either nondetect or greater than the RL.

SDG 20F178

- Lead, manganese, copper, thallium, sodium, and mercury were detected in some of the laboratory blank samples. Lead, manganese, and thallium were detected in the calibration blanks associated with the reanalyzed or diluted sample results and the applicable results were qualified as nondetect "U" at the RL. Results for these analytes were reported from the initial analysis as this analysis was identified as the most defensible set of results. Lead, manganese, and thallium results for these analytes were nondetect in the calibration blanks associated with the initial analysis and therefore no further qualification is required. All other detected analytes did not require qualification as sample results were either nondetect or greater than the RL.

SDG 20F179

- All Associated laboratory blank results were nondetect. No qualifications were required.

SDG 20F183

- Lead, manganese, copper, cadmium, thallium, and mercury were detected in some of the laboratory blank samples. Lead and manganese were detected in the initial calibration blanks associated with the initial analyses. Lead, manganese, and copper were detected in the calibration blanks associated with the reanalyzed or diluted sample results. Applicable lead and manganese results were qualified as nondetect "U" at the RL. The laboratory identified which results were reportable and qualifiers were applied accordingly. All other detected analytes did not require qualification as sample results were nondetect.

SDG 20F210

- Lead, thallium, and mercury were detected in some of the laboratory blank samples. Applicable sample results for lead were qualified as nondetect "U" at the RL. All other detected analytes did not require qualification as associated sample results were nondetect.

Ideally, no contaminants should be found in the blank samples. Blank samples are used to determine the validity of the analytical results by determining the existence and magnitude of contamination resulting from laboratory (or field) activities or baseline drift during analysis. As discussed above, analytes were detected in some of the laboratory blank samples. Concentrations were below the RLs for all detected blank results. Analytes detected in laboratory blanks are common with laboratory analyses and almost unavoidable with possible laboratory contamination.

Associated sample results for the laboratory blanks and or field blank samples were qualified following the appropriate guidelines. Detected blank concentrations were below the RLs and the resulting sample qualifications as nondetect or "U" does not falsely diminish identification of site-related contaminants.

5.3 Representativeness

Representativeness is a qualitative term that expresses the degree to which the sample data accurately and precisely represent the environmental conditions corresponding to the location and/or depth interval of sample collection. Requirements and procedures for sample collection were designed to maximize sample representativeness.

Representativeness can be monitored by reviewing field documentation and/or performing field audits. For this report, a detailed review was performed on the COC and field data collection forms. Appropriate laboratory QA/QC requirements were described in the QAPP (CDM Smith 2019) and laboratory statement of work to confirm that the laboratory analytical results were representative of true field conditions.

Field sampling representativeness was attained through strict adherence to the sampling design and the approved QAPP (CDM Smith 2019) procedures and by using EPA-approved analytical methods for sample analyses. As a result, the data represent as near as possible the actual field conditions at the time of sampling.

Representativeness, as defined above, was met for the fieldwork and laboratory analyses. The data collected are suitable for project use.

5.4 Comparability

Comparability is a qualitative term that expresses the confidence with which a data set can be compared with another. Strict adherence to standard sample collection procedures, analytical detection limits, and analytical methods is necessary so that data from like samples and sample conditions are comparable. This comparability is independent of laboratory personnel, data reviewers, or sampling personnel. Comparability criteria are met for the project if, based on data review, the sample collection and analytical procedures are determined to have been followed or defined to show that variations did not affect the values reported.

To achieve comparability of data generated for the Site, CDM Smith followed standard sample collection procedures and EPA-approved analytical methods during sampling activities. The sample analyses were performed by EMAX Laboratories Inc. using approved standard operating procedures. Utilizing such procedures and methods enables the current data to be comparable to future data sets generated with similar methods and units.

5.5 Completeness

Completeness of the field program is defined as the percentage of samples planned for collection as listed in the QAPP (CDM Smith 2019) versus the actual number of samples collected during the field program (see equation A).

Completeness for acceptable data is defined as the percentage of acceptable data obtained judged to be valid versus the total quantity of data generated (see equation B). Acceptable data include both data that pass all the QC criteria (unqualified data) and data that may not pass all the QC criteria but had appropriate corrective actions taken (qualified but usable data).

A. $$\%Completeness = Cx\frac{100}{n}$$

Where:

C = actual number of samples collected
n = total number of samples planned

B. $$\%Completeness = Vx\frac{100}{n'}$$

Where:

V = number of measurements judged valid
n' = total number of measurements made

The overall completeness goal for this sampling event was 90% for all project data.

All samples outlined in the QAPP (CDM Smith, 2019) were collected as planned. The completeness for the number of samples planned to be collected versus the number of samples collected was 100% for all analyses.

Analyses for the sampling event met the 90% completeness goal of acceptable data for the number of measurements judged to be valid versus the total number of measurements made.

One hundred percent of the data validated and reported are suitable for their intended use for site characterization. No results were rejected, and all data collected met the overall project objective for data usability. The completeness goals for both the number of samples collected for all sampling events and the number of measurements judged to be valid were met.

The data usability DQO was achieved; the data reported are suitable for their intended use as stated in the QAPP (CDM Smith 2019). The achievement of the completeness goals for the data provides sufficient data for project decisions.

5.6 Sensitivity

Sensitivity is related to the ability to compare analytical results with project-specific levels of interest such as delineation levels or action levels. Analytical quantitation limits for the various sample analytes should be below the level of interest to allow an effective comparison.

The method detection limit (MDL) study attempts to answer the question, "What is the minimum concentration of a substance that can be measured and reported with 99% confidence that the analyte concentration is greater than zero?" The study is based upon repetitive analysis of an interference-free sample spiked with a known amount of the target analyte. The MDL is a measure of the ability of the test procedure to generate a positive response for the target analyte in the absence of any other interferences from the sample.

The method reporting limit (MRL) is generally defined as the lowest concentration at which an analyte can be confidently reported in a sample and its concentration reported with a reasonable degree of accuracy and precision. For samples that do not pose a particular matrix problem, the MRL is typically about three to five times higher than the MDL.

Laboratory results are reported according to rules that provide established certainty of detection. The result for an analyte is flagged with a "U" if that analyte was not detected and reported at the

MRL value or qualified with a "J" flag if associated QC results fall outside the appropriate QC criteria. Additionally, if an analyte is present at a concentration between the MDL and the MRL, the analytical result is flagged with a "J," indicating an estimated quantity. Qualifying the result as an estimated concentration reflects uncertainty in the reported value.

When required, dilutions were performed and accounted for in the reporting of MRLs. For each analyte, laboratory MRLs were low enough to compare to the project criteria stated in the laboratory statement of work and the QAPP (CDM Smith 2019).

Table 5-1 DQIs and Corresponding QC Parameters

Data Quality Indicators	QC Parameters Evaluation in Data Review/Validation
Precision	RPD values of: 1) Laboratory duplicates 2) Field duplicates 3) MS/MSD 4) LCS/LCSD Relative standard deviation (RSD) values of: 1) Initial calibration verifications
Accuracy/Bias	%R or percent difference (%D) values of: 1) LCS/LCSD 2) Matrix spike %R 3) Initial calibration verification/continuing calibration verification %R 4) Serial dilution (ICP metals) 5) ICP interference check standards 6) ICP-MS tune percent RSD 7) ICP-MS internal standard %R intensity 8) Low level check standard 9) Surrogates 10) Internal standards Results of: 1) Instrument and calibration blanks 2) Method (preparation) blanks 3) Field blanks 4) Trip blanks
Representativeness	Results of all blanks Sample integrity (COC and sample receipt forms) Holding times
Comparability	Sample-specific reporting limits Sample collection methods Laboratory analytical methods
Completeness	Data qualifiers Laboratory deliverables Requested/Reported valid results Field sample collection (primary and QC samples) Contract compliance (i.e., method and instrument QC within limits)
Sensitivity	Method reporting limits Low level standards Adequacy of sample dilution

Acronyms

µg/L - microgram per liter
mg/L - milligram per liter
N - normal sample
FD - field duplicate
J - estimated
J- - estimated, biased low
NC - not calculated
Q - qualifier
RPD - relative percent difference
U - not detected
Yellow Highlighting - RPD outside of 30% criteria - field duplicate sample and parent sample result qualified as estimated J

ABS Criteria - Sample concentrations less than 5x the reporting limit - absolute difference between the two results less than the reporting limit

Acronyms
µg/L - microgram per liter
mg/L - milligram per liter
N - normal sample
FD - field duplicate
J - estimated
J- - estimated, biased low
NC - not calculated
Q - qualifier
RPD - relative percent difference
U - not detected
Yellow Highlighting - RPD outside of 30% criteria - field duplicate sample and parent sample result qualified as estimated J

ABS Criteria - Sample concentrations less than 5x the reporting limit - absolute difference between the two results less than the reporting limit

Section 6

Data Usability Assessment

One hundred percent of the data reported and validated in this QCSR are suitable for their intended use as stated in the QAPP (CDM Smith 2019). No sample results were rejected.

The achievement of the completeness goals for the number of samples collected and the number of sample results acceptable for use provides sufficient quality data to support project decisions. Sample results that were qualified as estimated are usable for project decisions.

Groundwater Validation Report

Sample Delivery Group (SDG) Number: 20F154
Laboratory: EMAX Laboratories, Inc.

Matrix: Water
Collection date: 06/17/20
Analysis/Methods:

Volatile Organic Compounds SW8260C
Semivolatile Organic Compounds (1,4-Dioxane) SW8270D SIM
Metals SW6020A
Mercury SW7470A
Dissolved Gases - Method RSK 175
Wet Chemistry:
Chloride / Sulfate E300.0
Total Alkalinity SM2320B
Total Dissolved Solids SM2540C
Nitrate / Nitrite - N SM4500 - NO3E
TOC SW9060

Samples in SDG:

Lab ID	Sample Number	Lab ID	Sample Number
F154-01	MW20S-GW061720	F154-05	MW20D-GW061720
F154-02	MW02-GW061720	F154-06	FD04-GW061720
F154-03	TB03-GW061720	F154-07	TB02-GW061720
F154-04	TB04-GW061720		

Data validation was performed in accordance with the specific analytical methods, the National Functional Guidelines for Organic Superfund Methods Data Review (EPA January 2017), and the National Functional Guidelines for Inorganic Superfund Methods Data Review (EPA January 2017).

Volatile Organic Compounds 8260C

Precision:

	Yes	No	N/A
Are the field duplicate relative percent differences (RPD) ≤50% (soils), <30% (water) or within CRQL criteria?			Yes
Were the Matrix Spike Duplicate RPDs ≤ 20%? (Or lab defined limits)			Yes
Laboratory Control Spike Duplicates RPD within limits?			Yes

Comments (note deviations):

Comments (note deviations):

Comment:

A discrepancy was noted by the laboratory upon receipt of samples. The COC indicated a trip blank sample name of TB42-GW061720 and the sample bottle was labeled TB46-GW061720. CDM smith corrected the discrepancy; indicating the correct sample name should read TB46-GW061720.

Data is usable as reported.

Was post digestion spike criteria met (if applicable)?			N/A
Was laboratory control sample criteria met?	Yes		
Was laboratory blank criteria met (within control limits)?	Yes		
Were the Field Blanks results all < RL?			N/A
Were ICV/CCV % recoveries within 90-110%?	Yes		
Was the tune %RSD <5% ?			N/A
Was internal standard criteria met?			N/A

Comments (note deviations):

MS /MSD	Analyte	%R	Limits	Qualifiers	Associated Samples
MW14D-GW062320					
	Nitrate / Nitrite	Acceptable			

LCS / LCSD	Analyte	%R	Limits	Qualifiers	Associated Samples
		Acceptable			

ICV/CCV	%R	Limits	Qualifiers	Associated Samples
	Acceptable			

Blanks	Analyte	Result	MDL/RL	Qualifiers	Associated Samples
		Nondetect			

Field Blank	Analyte	Result	MDL/RL	Qualifiers	Associated Samples
N/A					

Tune	Analyte	%RSD	Limits	Qualifiers	Associated Samples
N/A					

Representativeness:	Yes	No	N/A
Were sampling procedures and design criteria met?	**Yes**		
Were holding times met?	**Yes**		
Was preservation criteria met? (0° C - 6° C)	**Yes**		
Were Chain-of-Custody records complete and provided in data package?	**Yes**		

Comments (note

The cooler temperatures were 3.9, 5.2 & 5.7°C

Preservation	**Cooler Temperature (Degrees C)**	**Preservation Criteria**	**Qualifiers**	**Associated Samples**
	Acceptable			

Holding Times	**Analyte**	**Days to Extraction**	**HT Criteria**	**Qualifier**	**Associated Samples**
		Acceptable			

Comparability:	Yes	No	N/A
Were analytical procedures and methods followed as defined in the QAPP or field change documentation?	**Yes**		

Comments (note deviations):

Completeness (90%):	Yes	No	N/A
Are all data in this SDG usable?	**Yes**		

Comments (note deviations):

Sensitivity:	Yes	No	N/A
Are MDLs present and reported?	**Yes**		
Do the reporting limits meet project requirements?	**Yes**		

Comments (note deviations):

Comment:

Data is usable with appropriate qualifiers applied.

Data Package Completeness Review Checklists

VA SLC OU-1
Data Package Completeness Review Checklist

SDG: 20F154

Required Documentation	Yes	No	Comments
1. Cover letter complete with the following information:	X		
▪ Title of report and laboratory unique report identification (sample delivery group number)	X		
▪ Project name, site location	X		
▪ Name and location of laboratory and second-site or subcontracted laboratory	X		
▪ Client name and address	X		
▪ Statement of authenticity and official signature and title of person authorizing report release	X		
2. Summary of samples received that correlates field sample IDs with the laboratory IDs	X		
3. Laboratory qualifier flags and definitions	X		
4. Preparation and/or analytical methods	X		
5. Sample results for each analyte (dry weight basis for soils)			
▪ Date received	X		
▪ Date analyzed (and time of analysis if the holding time is less than or equal to 48 hours)	X		
▪ Percent solids results for soil samples			Not Applicable
▪ Dilution factor (provide both diluted and undiluted results when available)	X		
▪ Sample-specific reporting limit adjusted for sample size, dilution/concentration	X		
▪ Sample-specific MDL adjusted for sample size, dilution/concentration	X		
▪ Units	X		
6. Case Narrative that addresses the following information at a minimum:	X		
▪ Sample receipt discrepancies	X		
▪ Descriptions of all nonconformances in the sample receipt, handling, preparation, analytical and reporting processes and the corrective action taken in each occurrence	X		
▪ Identification and justification for sample dilution	X		
▪ Sample cooler temperature at time of receipt	X		2.1°C, 2.3°C, 2.7 °C
▪ Final residual vacuum of each sample canister immediately prior to analysis, or upon receipt (Air analyses only)			Not Applicable
7. Surrogate percent recoveries (surrogate result, target concentration, percent recovery)	X		

Required Documentation	Yes	No	Comments
8. MS/MSD and LCS spike concentrations, native sample results, spiked sample results, percent recoveries, and RPDs between the MS and MSD results (associated QC limits must also be provided)	X		
9. Method blank results	X		
10. Analytical batch reference number that cross references samples to QC sample analyses	X		
11. Executed COC and sample receipt checklist	X		
12. Analytical sequence or laboratory run log that contains sufficient information to correlate samples reported in the summary results to the associated method QC information, such as initial and continuing calibration analyses	X		
13. Calibration blank results for inorganic analyses (required in hardcopy format only)	X		
14. Inductively coupled plasma (ICP) interference check sample for inorganic analyses, true and measured concentrations and percent recoveries (required in hardcopy format only)	X		
15. Reporting Limit Check Standard for metals analyses, true and measured concentrations and percent recoveries (if applicable, required in hardcopy format only)	X		
16. Post-digestion spike recoveries for metals analyses, (if applicable; required in hardcopy format only)	X		
17. Internal Standard recovery and retention time information, as applicable	X		
18. Initial calibration summary, including standard concentrations, response factors, average response factors, RSDs or correlation coefficients, and calibration plots or equations, if applicable (required in hardcopy format only)	X		
19. Continuing calibration verification summary, including expected and recovered concentrations and percent differences (required in hardcopy format only)	X		
20. Instrument tuning and mass calibration information for ICP /mass spectrometry analyses	X		
21. All associated instrument printouts for all samples, standards, and QC samples (e.g., raw data) necessary to re-calculate results as well as all manual integrations (if performed)	X		
22. Sample preparation logs that include the following information	X		
▪ Preparation start and end times (as applicable)	X		
▪ Beginning and ending temperatures of water baths and digestion blocks	X

Subject: RE: SLC VA Plume Sample Shipment

Hi Raman –

I forgot to mention, I checked with the project technical lead, and he would like to continue with the 21 day TAT for the samples as stated in the SOW.

Thanks,
Emma

Cc: Zakowski, Cherie <ZakowskiCA@cdmsmith.com>; Leslie, Karla L. <lesliekl@cdmsmith.com>
Subject: RE: SLC VA Plume Sample Shipment

Hi Raman,

The sample for #6 (FD04-GW061720) is 6/17. Please adjust as such. The sample #3 should be TB03-GW061720. To clarify, there should be two bottles labeled TB03-GW061720, and two bottles TB04-GW061720. Please let me know if you have any questions.

We shipped four more coolers today with the following tracking numbers:

- 394011446653
- 394011446664
- 394011446675
- 394011446686

I have attached a scanned version of the COCs to this email as well for the samples to expect. Please let me know if you identify any discrepancies.

Thanks,
Emma

Subject: RE: SLC VA Plume Sample Shipment

Hi Emma,

Please see below for the discrepancies found for the attached SDG:

We've received the first shipment of GW samples. Attached are the COCs and SRFs for SDG 20F154. We found the following discrepancies; please let me know how to proceed:

- For minor discrepancies, we plan to follow the COC
- Please confirm Sample ID for Sample #3: COC= TB03-GW061720 vs. Label (for one vial)= TB04-GW061720
- Please confirm collection date for Sample #6 (FD04-GW061720): COC = 6/17 vs. Label 6/16

Additionally, the COCs for this SDG mark 7 day TAT. For past SDGs for GW, 14 days is always marked and 21 day TAT is noted in the SOW. Please confirm the TAT needed for these samples. (We received another SDG of GW samples (SDG 20F155) with no major discrepancies but 14 day is marked on COC.

Thanks!

REPORTING CONVENTIONS

DATA QUALIFIERS:

Lab Qualifier	AFCEE Qualifier	Description
J	F	Indicates that the analyte is positively identified and the result is less than RL but greater than MDL.
N		Indicates presumptive evidence of a compound.
B	B	Indicates that the analyte is found in the associated method blank as well as in the sample at above QC level.
E	J	Indicates that the result is above the maximum calibration range or estimated value.
*	*	Out of QC limit.

Note: The above qualifiers are used to flag the results unless the project requires a different set of qualification criteria.

ACRONYMS AND ABBREVIATIONS:

CRDL	Contract Required Detection Limit
RL	Reporting Limit
MRL	Method Reporting Limit
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
DO	Diluted out

DATES

The date and time information for leaching and preparation reflect the beginning date and time of the procedure unless the method, protocol, or project specifically requires otherwise.

LABORATORY REPORT FOR

CDM SMITH

VA SALT LAKE CITY

METHOD SW5030B/8260C
VOLATILE ORGANICS BY GC/MS

SDG#: 20F154

CASE NARRATIVE

Client : CDM SMITH

Project: VA SALT LAKE CITY

SDG : 20F154

METHOD SW5030B/8260C
VOLATILE ORGANICS BY GC/MS

A total of seven(7) water samples were received on 06/18/20 to be analyzed for Volatile Organics by GC/MS in accordance with Method SW5030B/8260C and project specific requirements.

Holding Time
Samples were analyzed within the prescribed holding time.

Instrument Performance and Calibration
Instrument tune check was performed prior to calibration. Result was within acceptance criteria. Multi-calibration points were generated to establish initial calibration (ICAL). ICAL was verified using secondary source (ICV). Continuing calibration (CCV) was carried out at a frequency required by the project. All calibration requirements were satisfied. Average response factors for all analytes were within method recommended response factors with the exception of Acetone and 2-Butanone. However, percent recoveries for all target analytes were within 70-130% on all calibration points. Refer to calibration summary forms of ICAL, ICV and CCV for details.
Method Blank
Method blank was prepared and analyzed at the frequency required by the project. For this SDG, two(2) method blanks were analyzed. VOF3F15B and VOF3F17B were compliant to project requirement. Refer to sample result summary forms for details.

Lab Control Sample
Lab control sample was prepared and analyzed at a frequency required by the project. For this SDG, two(2) sets of LCS/LCD were analyzed. VOF3F15L/VOF3F15C and VOF3F17L/VOF3F17C were within LCS limits. Refer to LCS summary forms for details.

Matrix QC Sample
Matrix spike sample was prepared and analyzed at a frequency required by the project. For this SDG, one(1) set of MS/MSD was analyzed and the following was noted: F154-02M/F154-02S - Percent recovery for Tetrachloroethene(19X) was not within MS/MSD QC limits. The enclosed value(#X) is the ratio of parent sample result and spike amount. Presence of matrix interference was suspected. The rest of the analytes were in control. Refer to Matrix QC summary form for details.

Surrogate
Surrogates were added on QC and field samples. All surrogate recoveries were within QC limits. Refer to sample result summary forms for details.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. Results were evaluated in accordance to project requirements. For this SDG, all quality control requirements were met with the exception of those that were discussed within the associated QC parameter.

LABORATORY REPORT FOR

CDM SMITH

VA SALT LAKE CITY

METHOD SW3520C/SW8270D SIM
1,4-DIOXANE BY GC/MS SIM

SDG#: 20F154

CASE NARRATIVE

Client : CDM SMITH

Project: VA SALT LAKE CITY

SDG : 20F154

METHOD SW3520C/SW8270D SIM
1,4-DIOXANE BY GC/MS SIM

A total of four(4) water samples were received on 06/18/20 to be analyzed for 1,4-Dioxane by GC/MS SIM in accordance with Method SW3520C/SW8270D SIM and project specific requirements.

Holding Time
Samples were analyzed within the prescribed holding time.

Instrument Performance and Calibration
Instrument tune check was performed prior to calibration. Result was within acceptance criteria. Multi-calibration points were generated to establish initial calibration (ICAL). ICAL was verified using secondary source (ICV). Continuing calibration (CCV) was carried out at a frequency required by the project. There was one(1)CCV associated with this SDG CCV(Datafile ID:RFF060) was within calibration acceptance criteria. All calibration requirements were satisfied. Refer to calibration summary forms of ICAL, ICV and CCV for details.

Method Blank
Method blank was prepared and analyzed at the frequency required by the project. For this SDG, one(1) method blank was analyzed. SVF016WB - result was compliant to project requirement. Refer to sample result summary form for details.

Lab Control Sample
Lab control sample was prepared and analyzed at a frequency required by the project. For this SDG, one(1) set of LCS/LCD was analyzed. SVF016WL/SVF016WC were within LCS limits. Refer to LCS summary form for details.

Matrix QC Sample
Matrix spike sample was prepared and analyzed at a frequency required by the project. For this SDG, one(1) set of MS/MSD was analyzed. 1,4-Dioxane (P-DIOXANE) was within MS QC limits in 20F154-02M/20F154-02S. Refer to Matrix QC summary form for details.

Surrogate
Surrogate was added on QC and field samples. All surrogate recoveries were within QC limits. Refer to sample result summary forms for details.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. Results were evaluated in accordance to project requirements. For this SDG, all quality control requirements were met.

LABORATORY REPORT FOR

CDM SMITH

VA SALT LAKE CITY

METHOD RSK-175
DISSOLVED GASES

SDG#: 20F154

CASE NARRATIVE

Client : CDM SMITH

Project: VA SALT LAKE CITY

SDG : 20F154

METHOD RSK-175
DISSOLVED GASES

A total of four(4) water samples were received on 06/18/20 to be analyzed for Dissolved Gases in accordance with Method RSK-175 and project specific requirements.

Holding Time
Samples were analyzed within the prescribed holding time.

Calibration
Multi-calibration points were generated to establish initial calibration (ICAL). ICAL was verified using a secondary source (ICV). Continuing calibration (CCV) verifications were carried out on a frequency specified by the project. All calibration requirements were within acceptance criteria. Refer to calibration summary forms of ICAL, ICV and CCV for details.

Method Blank
Method blank was prepared and analyzed at the frequency required by the project. For this SDG, one(1) method blank was analyzed. DGF012WB - result was compliant to project requirement. Refer to sample result summary form for details.

Lab Control Sample
Lab control sample was prepared and analyzed at a frequency required by the project. For this SDG, one(1) set of LCS/LCD was analyzed. DGF012WL/DGF012WC were within LCS limits. Refer to LCS summary form for details.

Matrix QC Sample
Matrix spike sample was prepared and analyzed at a frequency required by the project. For this SDG, one(1) set of MS/MSD was analyzed. F154-02M/F154-02S - all analytes were within MS QC limits. Refer to Matrix QC summary form for details.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. Results were evaluated in accordance to project requirements. For this SDG, all quality control requirements were met.

LABORATORY REPORT FOR

CDM SMITH

VA SALT LAKE CITY

METALS / MERCURY

SDG#: 20F154

CASE NARRATIVE

Client : CDM SMITH

Project: VA SALT LAKE CITY

SDG : 20F154

METHOD SW6020A
METALS BY ICP-MS

A total of four(4) water samples were received on 06/18/20 to be analyzed for Metals by ICP-MS in accordance with Method SW6020A and project specific requirements.

Holding Time
Samples were digested and analyzed within the prescribed holding time.

Calibration
Initial Calibration was established as prescribed by the method and was verified using a secondary source(ICV). Interference checks were performed and results were within required limits. Continuing calibration verifications and continuing calibration blanks were carried out at the frequency specified by the project. All calibration requirements were satisfied. MRL was analyzed as required by the project.

Method Blank
Method blank was prepared and analyzed at the frequency required by the project. For this SDG, one(1) method blank was analyzed. Sodium(26.7J <1/2 LOQ) was detected at trace level in IMF029WB. Refer to sample result summary form for details.

Lab Control Sample
Lab control sample was prepared and analyzed at a frequency required by the project. For this SDG, one(1) set of LCS/LCD was analyzed. IMF029WL/IMF029WC were within LCS limits. Refer to LCS summary form for details.

Matrix QC Sample
Matrix spike sample was prepared and analyzed at a frequency required by the project. For this SDG, one(1) set of MS/MSD was analyzed and the following were noted: F154-02M/F154-02S - Percent recoveries for Calcium(60X), Magnesium(21X) and Sodium(51X) were not within MS/MSD QC limits. The enclosed value(#X) is the ratio of parent sample result and spike amount. Presence of matrix interference was suspected. The rest of the analytes were in control. Analytical spike and serial dilution were analyzed and evaluated as appropriate. Results were within expected values. Refer to Matrix QC summary forms for details.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. Results were evaluated in accordance to project requirements. For this SDG, all quality control requirements were met with the exception of those that were discussed within the associated QC parameter.

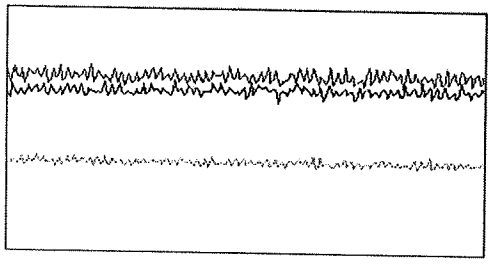
Performance Report

Operator Name	LYaman
Acq. Date-Time	2020-06-26 09:06:44
Instrument Name	G8421A SG19253823
Sample Introduction	ISIS
Nebulizer Type	MicroMist
Ion Lens Model	x-Lens
Tune Parameters	Standard Tune

Sensitivity



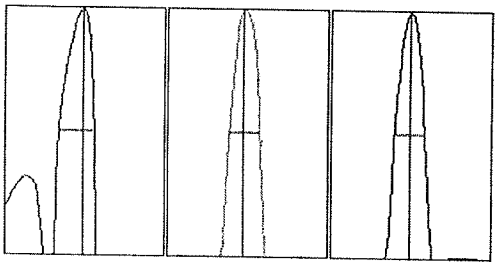
Mass	Range	Count	RSD%	Background
7	10000	7247	2.967	0.150
89	50000	18479	3.240	0.900
205	20000	13284	2.557	3.050

Sampling Period [sec]	0.311
Integration Time [sec]	0.1

Oxide/Doubly Charged Ratio

Oxide	156 / 140 1.319 %
Doubly Charged	70 / 140 1.454 %

Resolution/Axis



Mass	Peak Height	Axis	W-50%	W-10%
7	7126.74	7.00	0.65	0.77
89	18082.03	88.95	0.57	0.75
205	12905.61	205.00	0.56	0.75

Integration Time [sec]	0.1
Acquisition Time [sec]	22.74

Tune Parameters

Plasma Parameters

RF Power	1550 W	Option Gas	---	Makeup Gas	0.00 L/min
RF Matching	1.20 V	Nebulizer Pump	0.10 rps	Auxiliary Gas	0.90 L/min
Sample Depth	8.0 mm	S/C Temp	2 °C	Plasma Gas	15.0 L/min
Nebulizer Gas	1.08 L/min				

Lens Parameters

Extract 1	0.0 V	Omega Lens	7.2 V	Deflect	13.0 V
Extract 2	-175.0 V	Cell Entrance	-30 V	Plate Bias	-35 V

Tune Parameters

Plasma Parameters

Plasma Mode	HMI	Nebulizer Gas	0.62 L/min	Dilution Gas	0.36 L/min
RF Power	1600 W	Option Gas	---	Auxiliary Gas	0.90 L/min
RF Matching	1.10 V	Nebulizer Pump	0.10 rps	Plasma Gas	15.0 L/min
Sample Depth	10.0 mm	S/C Temp	2 °C		

Lens Parameters

Extract 1	0.0 V	Omega Lens	9.0 V	Deflect	13.2 V
Extract 2	-200.0 V	Cell Entrance	-30 V	Plate Bias	-35 V
Omega Bias	-80 V	Cell Exit	-50 V		

Cell Parameters

Use Gas	No	3rd Gas Flow	---	Energy Discrimination	5.0 V
He Flow	0.0 mL/min	OctP Bias	-8.0 V		
H2 Flow	0.0 mL/min	OctP RF	190 V		

QP Parameters

Mass Gain	123	Axis Gain	0.9997	QP Bias	-3.0 V
Mass Offset	124	Axis Offset	-0.07		

Hardware Settings

Torch

Torch H	0.5 mm	Torch V	-0.3 mm

EM

Discriminator	4.1 mV	Analog HV	2401 V	Pulse HV	1546 V

CASE NARRATIVE

Client : CDM SMITH

Project: VA SALT LAKE CITY

SDG : 20F154

METHOD SW7470A
MERCURY BY COLD VAPOR

A total of four(4) water samples were received on 06/18/20 to be analyzed for Mercury by Cold Vapor in accordance with Method SW7470A and project specific requirements.

Holding Time
Samples were digested and analyzed within the prescribed holding time.

Calibration
Multi-calibration points were generated to establish initial calibration (ICAL). ICAL was verified using a secondary source (ICV). Continuing calibration (CCV) verifications were carried out on a frequency specified by the project. All calibration requirements were within acceptance criteria.

Method Blank
Method blank was prepared and analyzed at the frequency required by the project. For this SDG, one(1) method blank was analyzed. Mercury was not detected in HGF012WB. Refer to sample result summary form for details.

Lab Control Sample
Lab control sample was prepared and analyzed at a frequency required by the project. For this SDG, one(1) set of LCS/LCD was analyzed. HGF012WL/HGF012WC were within LCS limits. Refer to LCS summary form for details.

Matrix QC Sample
Matrix spike sample was prepared and analyzed at a frequency required by the project. For this SDG, one(1) set of MS/MSD was analyzed. Mercury was within MS QC limits in F154-02M/F154-02S. Refer to Matrix QC summary form for details.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. Results were evaluated in accordance to project requirements. For this SDG, all quality control requirements were met.

LABORATORY REPORT FOR

CDM SMITH

VA SALT LAKE CITY

WET CHEMICAL ANALYSES

SDG#: 20F154

CASE NARRATIVE

Client : CDM SMITH

Project: VA SALT LAKE CITY

SDG : 20F154

METHOD E300.0
CHLORIDE

A total of four(4) water samples were received on 06/18/20 to be analyzed for Chloride in accordance with Method E300.0 and project specific requirements.

Holding Time
Samples were analyzed within the prescribed holding time.

Calibration
Calibration was performed as prescribed by the method and was verified using a secondary source (ICV). All calibration requirements were within acceptance criteria.

Method Blank
Method blank was prepared and analyzed at the frequency required by the project. For this SDG, one(1) method blank was analyzed. Chloride was not detected in ICF010WB. Refer to sample result summary form for details.

Lab Control Sample
Lab control sample was prepared and analyzed at a frequency required by the project. For this SDG, one(1) set of LCS/LCD was analyzed. ICF010WL/ICF010WC were within LCS limits. Refer to LCS summary form for details.

Matrix QC Sample
Matrix spike sample was prepared and analyzed at a frequency required by the project. For this SDG, one(1) set of MS/MSD was analyzed. Chloride was within MS QC limits in F154-02JM/F154-02JS. Sample duplicate was analyzed and RPD was within expected value. Refer to Matrix QC summary forms for details.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. Results were evaluated in accordance to project requirements. For this SDG, all quality control requirements were met.

METHOD E300.0
SULFATE

A total of four(4) water samples were received on 06/18/20 to be analyzed for Sulfate in accordance with Method E300.0 and project specific requirements.

Holding Time
Samples were analyzed within the prescribed holding time.

Calibration
Calibration was performed as prescribed by the method and was verified using a secondary source (ICV). All calibration requirements were within acceptance criteria.

Method Blank
Method blank was prepared and analyzed at the frequency required by the project. For this SDG, one(1) method blank was analyzed. Sulfate was not detected in ICF010WB. Refer to sample result summary form for details.

Lab Control Sample
Lab control sample was prepared and analyzed at a frequency required by the project. For this SDG, one(1) set of LCS/LCD was analyzed. ICF010WL/ICF010WC were within LCS limits. Refer to LCS summary form for details.

Matrix QC Sample
Matrix spike sample was prepared and analyzed at a frequency required by the project. For this SDG, one(1) set of MS/MSD was analyzed and the following was noted: F154-02IM/F154-02IS - Percent recovery for Sulfate was not within MS/MSD QC limits. Presence of matrix interference was suspected. Sample duplicate was analyzed and RPD was within expected value. Refer to Matrix QC summary forms for details.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. Results were evaluated in accordance to project requirements. For this SDG, all quality control requirements were met with the exception of those that were discussed within the associated QC parameter.

METHOD E300.0
CHLORIDE

CASE NARRATIVE

Client : CDM SMITH

Project: VA SALT LAKE CITY

SDG : 20F154

METHOD SM2320B
TOTAL ALKALINITY

A total of four(4) water samples were received on 06/18/20 to be analyzed for Total Alkalinity in accordance with Method SM2320B and project specific requirements.

Holding Time
Samples were analyzed within the prescribed holding time.

Calibration
Calibration was performed as prescribed by the method and was verified using a secondary source (ICV). All calibration requirements were within acceptance criteria.

Method Blank
Method blank was prepared and analyzed at the frequency required by the project. For this SDG, one(1) method blank was analyzed. Alkalinity was not detected in ALF008WB. Refer to sample result summary form for details.

Lab Control Sample
Lab control sample was prepared and analyzed at a frequency required by the project. For this SDG, one(1) set of LCS/LCD was analyzed. ALF008WL/ALF008WC were within LCS limits. Refer to LCS summary form for details.

Matrix QC Sample
Sample duplicate was analyzed and RPD was within expected value.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. Results were evaluated in accordance to project requirements. For this SDG, all quality control requirements were met.

CASE NARRATIVE

Client : CDM SMITH

Project: VA SALT LAKE CITY

SDG : 20F154

METHOD SM2540C
TOTAL DISSOLVED SOLIDS

A total of four(4) water samples were received on 06/18/20 to be analyzed for Total Dissolved Solids in accordance with Method SM2540C and project specific requirements.

Holding Time
Samples were analyzed within the prescribed holding time.

Calibration
Balance calibration verifications were carried out on a frequency specified by the method. All calibration requirements were within acceptance criteria.

Method Blank
Method blank was prepared and analyzed at the frequency required by the project. For this SDG, one(1) method blank was analyzed. Total Dissolved Solids was not detected in TDF006WB. Refer to sample result summary form for details.

Lab Control Sample
Lab control sample was prepared and analyzed at a frequency required by the project. For this SDG, one(1) LCS was analyzed. Percent recovery for Total Dissolved Solids was within LCS QC limits in TDF006WL. Refer to LCS summary form for details.

Matrix QC Sample
Sample duplicate was analyzed and RPD was within expected value.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. Results were evaluated in accordance to project requirements. For this SDG, all quality control requirements were met.

CASE NARRATIVE

Client : CDM SMITH

Project: VA SALT LAKE CITY

SDG : 20F154

METHOD SM4500-NO3E
NITRATE/NITRITE-N

A total of four(4) water samples were received on 06/18/20 to be analyzed for Nitrate/Nitrite-N in accordance with Method SM4500-NO3E and project specific requirements.

Holding Time
Samples were analyzed within the prescribed holding time.

Calibration
Calibration was performed as prescribed by the method and was verified using a secondary source (ICV). All calibration requirements were within acceptance criteria.

Method Blank
Method blank was prepared and analyzed at the frequency required by the project. For this SDG, one(1) method blank was analyzed. Nitrogen, Nitrate-Nitrite was not detected in NAF006WB. Refer to sample result summary form for details.

Lab Control Sample
Lab control sample was prepared and analyzed at a frequency required by the project. For this SDG, one(1) set of LCS/LCD was analyzed. NAF006WL/NAF006WC were within LCS limits. Refer to LCS summary form for details.

Matrix QC Sample
Matrix spike sample was prepared and analyzed at a frequency required by the project. For this SDG, one(1) MS was analyzed. Percent recovery for Nitrogen, Nitrate-Nitrite was within MS QC limits in F154-02IM. Sample duplicate was analyzed and RPD was within expected value. Refer to Matrix QC summary forms for details.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. Results were evaluated in accordance to project requirements. For this SDG, all quality control requirements were met.

CASE NARRATIVE

Client : CDM SMITH

Project: VA SALT LAKE CITY

SDG : 20F154

METHOD SW9060
TOC

A total of four(4) water samples were received on 06/18/20 to be analyzed for TOC in accordance with Method SW9060 and project specific requirements.

Holding Time
Samples were analyzed within the prescribed holding time.

Calibration
Calibration was performed as prescribed by the method and was verified using a secondary source (ICV). All calibration requirements were within acceptance criteria.

Method Blank
Method blank was prepared and analyzed at the frequency required by the project. For this SDG, two(2) method blanks were analyzed. TCG001WB and TCG002WB were compliant to project requirement. Refer to sample result summary forms for details.

Lab Control Sample
Lab control sample was prepared and analyzed at a frequency required by the project. For this SDG, two(2) sets of LCS/LCD were analyzed. TCG001WL/TCG001WC and TCG002WL/TCG002WC were within LCS limits. Refer to LCS summary forms for details.

Matrix QC Sample
Matrix spike sample was prepared and analyzed at a frequency required by the project. For this SDG, one(1) set of MS/MSD was analyzed. Total Organic Carbon was within MS QC limits in F154-02M/F154-02S. Sample duplicate was analyzed and RPD was within expected value. Refer to Matrix QC summary forms for details.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. Results were evaluated in accordance to project requirements. For this SDG, all quality control requirements were met.

NOTICE: Turn-around-time (TAT) for samples shall not begin untill all discrepancies have been resolved. For samples received and discrepacies resolved after 1500 hrs, TAT shall start at 0800 hrs the next business day. The client is responsible for all cost associted with sample disposal. Samples shall be disposed of as soon as practical (but not prior to fifteen (15) calendar days) after issuance of analytical report unless a different sample disposal schedule is pre-arranged with EMAX. Disposal fee for samples defined by CA Title 22 as non-hazardous shall be $5.00 per sample. EMAX will return hazardous samples to the client at the client's expense unless directed in writing otherwise.

REPORTING CONVENTIONS

DATA QUALIFIERS:

Lab Qualifier	AFCEE Qualifier	Description
J	F	Indicates that the analyte is positively identified and the result is less than RL but greater than MDL.
N		Indicates presumptive evidence of a compound.
B	B	Indicates that the analyte is found in the associated method blank as well as in the sample at above QC level.
E	J	Indicates that the result is above the maximum calibration range or estimated value.
*	*	Out of QC limit.

Note: The above qualifiers are used to flag the results unless the project requires a different set of qualification criteria.

ACRONYMS AND ABBREVIATIONS:

CRDL	Contract Required Detection Limit
RL	Reporting Limit
MRL	Method Reporting Limit
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
DO	Diluted out

DATES

The date and time information for leaching and preparation reflect the beginning date and time of the procedure unless the method, protocol, or project specifically requires otherwise.

LABORATORY REPORT FOR

CDM SMITH

VA SALT LAKE CITY

METHOD SW5030B/8260C
VOLATILE ORGANICS BY GC/MS

SDG#: 20F155

CASE NARRATIVE

Client : CDM SMITH

Project: VA SALT LAKE CITY

SDG : 20F155

METHOD SW5030B/8260C
VOLATILE ORGANICS BY GC/MS

A total of three(3) water samples were received on 06/18/20 to be analyzed for Volatile Organics by GC/MS in accordance with Method SW5030B/8260C and project specific requirements.

Holding Time
Samples were analyzed within the prescribed holding time.

Instrument Performance and Calibration
Instrument tune check was performed prior to calibration. Result was within acceptance criteria. Multi-calibration points were generated to establish initial calibration (ICAL). ICAL was verified using secondary source (ICV). Continuing calibration (CCV) was carried out at a frequency required by the project. All calibration requirements were satisfied. Average response factors for all analytes were within method recommended response factors with the exception of Acetone and 2-Butanone. However, percent recoveries for all target analytes were within 70-130% on all calibration points. Refer to calibration summary forms of ICAL, ICV and CCV for details.

Method Blank
Method blank was prepared and analyzed at the frequency required by the project. For this SDG, one(1) method blank was analyzed. VOF3F16B - result was compliant to project requirement. Refer to sample result summary form for details.

Lab Control Sample
Lab control sample was prepared and analyzed at a frequency required by the project. For this SDG, one(1) set of LCS/LCD was analyzed. VOF3F16L/VOF3F16C were within LCS limits. Refer to LCS summary form for details.

Matrix QC Sample
No matrix QC sample was provided on this SDG.

Surrogate
Surrogates were added on QC and field samples. All surrogate recoveries were within QC limits. Refer to sample result summary forms for details.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. Results were evaluated in accordance to project requirements. For this SDG, all quality control requirements were met.

VOLATILE ORGANIC INSTRUMENT PERFORMANCE CHECK
BROMOFLUOROBENZENE (BFB)

Lab Name: EMAX Inc
Lab Code: EMXT Case No.:
Lab File ID: RDR001
Instrument ID: F3
GC Column: ZB-624 ID:0.25mm

Contract: ICAL
SAS No.: SDG No.: ICAL
BFB Injection Date : 04/02/20
BFB Injection Time : 16:01
Heated Purge: (Y/N) N

m/e	ION ABUNDANCE CRITERIA	% RELATIVE ABUNDANCE
50	15.0 - 40.0% of mass 95	26.44
75	30.0 - 60.0% of mass 95	50.24
95	Base peak, 10D% relative abundance	100.00
96	5.0 - 9.0% of mass 95	7.69
173	Less than 2.0% of mass 174	0.00(0.0)1
174	Greater than 50% of mass 95	72.41
175	5.0 - 9.0% of mass 174	6.02(8.3)1
176	95.D - 1D1.0% of mass 174	71.36(98.5)1
177	5.0 - 9.0% of mass 176	5.18(7.3)2

1-Value is % mass 174 2-Value is % mass 176

THIS CHECK APPLIES TO THE FOLLOWING SAMPLES, MS, MSD,BLANKS, AND STANDARDS:

	EPA SAMPLE NO.	LAB SAMPLE ID	LAB FILE ID	DATE ANALYZED	TIME ANALYZED

LABORATORY REPORT FOR

CDM SMITH

VA SALT LAKE CITY

METHOD SW3520C/SW8270D SIM
1,4-DIOXANE BY GC/MS SIM

SDG#: 20F155

CASE NARRATIVE

Client : CDM SMITH

Project: VA SALT LAKE CITY

SDG : 20F155

METHOD SW3520C/SW8270D SIM
1,4-DIOXANE BY GC/MS SIM

A total of two(2) water samples were received on 06/18/20 to be analyzed for 1,4-Dioxane by GC/MS SIM in accordance with Method SW3520C/SW8270D SIM and project specific requirements.

Holding Time
Samples were analyzed within the prescribed holding time.

Instrument Performance and Calibration
Instrument tune check was performed prior to calibration. Result was within acceptance criteria. Multi-calibration points were generated to establish initial calibration (ICAL). ICAL was verified using secondary source (ICV). Continuing calibration (CCV) was carried out at a frequency required by the project. There was one(1)CCV associated with this SDG CCV(Datafile ID:RFF060) was within calibration acceptance criteria. All calibration requirements were satisfied. Refer to calibration summary forms of ICAL, ICV and CCV for details.

Method Blank
Method blank was prepared and analyzed at the frequency required by the project. For this SDG, one(1) method blank was analyzed. SVF016WB - result was compliant to project requirement. Refer to sample result summary form for details.

Lab Control Sample
Lab control sample was prepared and analyzed at a frequency required by the project. For this SDG, one(1) set of LCS/LCD was analyzed. SVF016WL/SVF016WC were within LCS limits. Refer to LCS summary form for details.

Matrix QC Sample
No matrix QC sample was provided on this SDG.

Surrogate
Surrogate was added on QC and field samples. All surrogate recoveries were within QC limits. Refer to sample result summary forms for details.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. Results were evaluated in accordance to project requirements. For this SDG, all quality control requirements were met.

LABORATORY REPORT FOR

CDM SMITH

VA SALT LAKE CITY

METHOD RSK-175
DISSOLVED GASES

SDG#: 20F155

CASE NARRATIVE

Client : CDM SMITH

Project: VA SALT LAKE CITY

SDG : 20F155

METHOD RSK-175
DISSOLVED GASES

A total of two(2) water samples were received on 06/18/20 to be analyzed for Dissolved Gases in accordance with Method RSK-175 and project specific requirements.

Holding Time
Samples were analyzed within the prescribed holding time.

Calibration
Multi-calibration points were generated to establish initial calibration (ICAL). ICAL was verified using a secondary source (ICV). Continuing calibration (CCV) verifications were carried out on a frequency specified by the project. All calibration requirements were within acceptance criteria. Refer to calibration summary forms of ICAL, ICV and CCV for details.

Method Blank
Method blank was prepared and analyzed at the frequency required by the project. For this SDG, one(1) method blank was analyzed. DGF012WB - result was compliant to project requirement. Refer to sample result summary form for details.

Lab Control Sample
Lab control sample was prepared and analyzed at a frequency required by the project. For this SDG, one(1) set of LCS/LCD was analyzed. DGF012WL/DGF012WC were within LCS limits. Refer to LCS summary form for details.

Matrix QC Sample
No matrix QC sample was provided on this SDG.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. Results were evaluated in accordance to project requirements. For this SDG, all quality control requirements were met.

LABORATORY REPORT FOR

CDM SMITH

VA SALT LAKE CITY

METALS / MERCURY

SDG#: 20F155

CASE NARRATIVE

Client : CDM SMITH

Project: VA SALT LAKE CITY

SDG : 20F155

METHOD SW6020A
METALS BY ICP-MS

A total of two(2) water samples were received on 06/18/20 to be analyzed for Metals by ICP-MS in accordance with Method SW6020A and project specific requirements.

Holding Time
Samples were digested and analyzed within the prescribed holding time.

Calibration
Initial Calibration was established as prescribed by the method and was verified using a secondary source(ICV). Interference checks were performed and results were within required limits. Continuing calibration verifications and continuing calibration blanks were carried out at the frequency specified by the project. All calibration requirements were satisfied. MRL was analyzed as required by the project.

Method Blank
Method blank was prepared and analyzed at the frequency required by the project. For this SDG, one(1) method blank was analyzed. Calcium(41.4J <1/2 LOQ) was detected at trace level in IMF035WB. Refer to sample result summary form for details.

Lab Control Sample
Lab control sample was prepared and analyzed at a frequency required by the project. For this SDG, one(1) set of LCS/LCD was analyzed. IMF035WL/IMF035WC were within LCS limits. Refer to LCS summary form for details.

Matrix QC Sample
No matrix QC sample was provided on this SDG.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. Results were evaluated in accordance to project requirements. For this SDG, all quality control requirements were met.

CASE NARRATIVE

Client : CDM SMITH

Project: VA SALT LAKE CITY

SDG : 20F155

METHOD SW7470A
MERCURY BY COLD VAPOR

A total of two(2) water samples were received on 06/18/20 to be analyzed for Mercury by Cold Vapor in accordance with Method SW7470A and project specific requirements.

Holding Time
Samples were digested and analyzed within the prescribed holding time.

Calibration
Multi-calibration points were generated to establish initial calibration (ICAL). ICAL was verified using a secondary source (ICV). Continuing calibration (CCV) verifications were carried out on a frequency specified by the project. All calibration requirements were within acceptance criteria.

Method Blank
Method blank was prepared and analyzed at the frequency required by the project. For this SDG, one(1) method blank was analyzed. Mercury was not detected in HGF014WB. Refer to sample result summary form for details.

Lab Control Sample
Lab control sample was prepared and analyzed at a frequency required by the project. For this SDG, one(1) set of LCS/LCD was analyzed. HGF014WL/HGF014WC were within LCS limits. Refer to LCS summary form for details.

Matrix QC Sample
No matrix QC sample was provided on this SDG.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. Results were evaluated in accordance to project requirements. For this SDG, all quality control requirements were met.

LABORATORY REPORT FOR

CDM SMITH

VA SALT LAKE CITY

WET CHEMICAL ANALYSES

SDG#: 20F155

CASE NARRATIVE

Client : CDM SMITH

Project: VA SALT LAKE CITY

SDG : 20F155

METHOD E300.0
CHLORIDE

A total of two(2) water samples were received on 06/18/20 to be analyzed for Chloride in accordance with Method E300.0 and project specific requirements.

Holding Time
Samples were analyzed within the prescribed holding time.

Calibration
Calibration was performed as prescribed by the method and was verified using a secondary source (ICV). All calibration requirements were within acceptance criteria.

Method Blank
Method blank was prepared and analyzed at the frequency required by the project. For this SDG, one(1) method blank was analyzed. Chloride was not detected in ICF029WB. Refer to sample result summary form for details.

Lab Control Sample
Lab control sample was prepared and analyzed at a frequency required by the project. For this SDG, one(1) set of LCS/LCD was analyzed. ICF029WL/ICF029WC were within LCS limits. Refer to LCS summary form for details.

Matrix QC Sample
No matrix QC sample was provided on this SDG.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. Results were evaluated in accordance to project requirements. For this SDG, all quality control requirements were met.

CASE NARRATIVE

Client : CDM SMITH

Project: VA SALT LAKE CITY

SDG : 20F155

METHOD E300.0
SULFATE

A total of two(2) water samples were received on 06/18/20 to be analyzed for Sulfate in accordance with Method E300.0 and project specific requirements.

Holding Time
Samples were analyzed within the prescribed holding time.

Calibration
Calibration was performed as prescribed by the method and was verified using a secondary source (ICV). All calibration requirements were within acceptance criteria.

Method Blank
Method blank was prepared and analyzed at the frequency required by the project. For this SDG, one(1) method blank was analyzed. Sulfate was not detected in ICF029WB. Refer to sample result summary form for details.

Lab Control Sample
Lab control sample was prepared and analyzed at a frequency required by the project. For this SDG, one(1) set of LCS/LCD was analyzed. ICF029WL/ICF029WC were within LCS limits. Refer to LCS summary form for details.

Matrix QC Sample
No matrix QC sample was provided on this SDG.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. Results were evaluated in accordance to project requirements. For this SDG, all quality control requirements were met.

CASE NARRATIVE

Client : CDM SMITH

Project: VA SALT LAKE CITY

SDG : 20F155

METHOD SM2320B
TOTAL ALKALINITY

A total of two(2) water samples were received on 06/18/20 to be analyzed for Total Alkalinity in accordance with Method SM2320B and project specific requirements.

Holding Time
Samples were analyzed within the prescribed holding time.

Calibration
Calibration was performed as prescribed by the method and was verified using a secondary source (ICV). All calibration requirements were within acceptance criteria.

Method Blank
Method blank was prepared and analyzed at the frequency required by the project. For this SDG, one(1) method blank was analyzed. Alkalinity was not detected in ALF009WB. Refer to sample result summary form for details.

Lab Control Sample
Lab control sample was prepared and analyzed at a frequency required by the project. For this SDG, one(1) set of LCS/LCD was analyzed. ALF009WL/ALF009WC were within LCS limits. Refer to LCS summary form for details.

Matrix QC Sample
No matrix QC sample was provided on this SDG.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. Results were evaluated in accordance to project requirements. For this SDG, all quality control requirements were met.

CASE NARRATIVE

Client : CDM SMITH

Project: VA SALT LAKE CITY

SDG : 20F155

METHOD SM2540C
TOTAL DISSOLVED SOLIDS

A total of two(2) water samples were received on 06/18/20 to be analyzed for Total Dissolved Solids in accordance with Method SM2540C and project specific requirements.

Holding Time
Samples were analyzed within the prescribed holding time.

Calibration
Balance calibration verifications were carried out on a frequency specified by the method. All calibration requirements were within acceptance criteria.

Method Blank
Method blank was prepared and analyzed at the frequency required by the project. For this SDG, one(1) method blank was analyzed. Total Dissolved Solids was not detected in TDF007WB. Refer to sample result summary form for details.

Lab Control Sample
Lab control sample was prepared and analyzed at a frequency required by the project. For this SDG, one(1) LCS was analyzed. Percent recovery for Total Dissolved Solids was within LCS QC limits in TDF007WL. Refer to LCS summary form for details.

Matrix QC Sample
Sample duplicate was analyzed and RPD was within expected value.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. Results were evaluated in accordance to project requirements. For this SDG, all quality control requirements were met.

CASE NARRATIVE

Client : CDM SMITH

Project: VA SALT LAKE CITY

SDG : 20F155

METHOD SM4500-NO3E
NITRATE/NITRITE-N

A total of two(2) water samples were received on 06/18/20 to be analyzed for Nitrate/Nitrite-N in accordance with Method SM4500-NO3E and project specific requirements.

Holding Time
Samples were analyzed within the prescribed holding time.

Calibration
Calibration was performed as prescribed by the method and was verified using a secondary source (ICV). All calibration requirements were within acceptance criteria.

Method Blank
Method blank was prepared and analyzed at the frequency required by the project. For this SDG, one(1) method blank was analyzed. Nitrogen, Nitrate-Nitrite was not detected in NAF006WB. Refer to sample result summary form for details.

Lab Control Sample
Lab control sample was prepared and analyzed at a frequency required by the project. For this SDG, one(1) set of LCS/LCD was analyzed. NAF006WL/NAF006WC were within LCS limits. Refer to LCS summary form for details.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. Results were evaluated in accordance to project requirements. For this SDG, all quality control requirements were met.

CASE NARRATIVE

Client : CDM SMITH

Project: VA SALT LAKE CITY

SDG : 20F155

METHOD SW9060
TOC

A total of two(2) water samples were received on 06/18/20 to be analyzed for TOC in accordance with Method SW9060 and project specific requirements.

Holding Time
Samples were analyzed within the prescribed holding time.

Calibration
Calibration was performed as prescribed by the method and was verified using a secondary source (ICV). All calibration requirements were within acceptance criteria.

Method Blank
Method blank was prepared and analyzed at the frequency required by the project. For this SDG, one(1) method blank was analyzed. Total Organic Carbon was not detected in TCG001WB. Refer to sample result summary form for details.

Lab Control Sample
Lab control sample was prepared and analyzed at a frequency required by the project. For this SDG, one(1) set of LCS/LCD was analyzed. TCG001WL/TCG001WC were within LCS limits. Refer to LCS summary form for details.

Matrix QC Sample
No matrix QC sample was provided on this SDG.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. Results were evaluated in accordance to project requirements. For this SDG, all quality control requirements were met.

REPORTING CONVENTIONS

DATA QUALIFIERS:

Lab Qualifier	AFCEE Qualifier	Description
J	F	Indicates that the analyte is positively identified and the result is less than RL but greater than MDL.
N		Indicates presumptive evidence of a compound.
B	B	Indicates that the analyte is found in the associated method blank as well as in the sample at above QC level.
E	J	Indicates that the result is above the maximum calibration range or estimated value.
*	*	Out of QC limit.

Note: The above qualifiers are used to flag the results unless the project requires a different set of qualification criteria.

ACRONYMS AND ABBREVIATIONS:

CRDL	Contract Required Detection Limit
RL	Reporting Limit
MRL	Method Reporting Limit
PQL	Practical Quantitation Limit
MDL	Method Detection Limit
DO	Diluted out

DATES

The date and time information for leaching and preparation reflect the beginning date and time of the procedure unless the method, protocol, or project specifically requires otherwise.

LABORATORY REPORT FOR

CDM SMITH

VA SALT LAKE CITY

METHOD SW5030B/8260C
VOLATILE ORGANICS BY GC/MS

SDG#: 20F162

CASE NARRATIVE

Client : CDM SMITH

Project: VA SALT LAKE CITY

SDG : 20F162

METHOD SW5030B/8260C
VOLATILE ORGANICS BY GC/MS

A total of twelve(12) water samples were received on 06/19/20 to be analyzed for Volatile Organics by GC/MS in accordance with Method SW5030B/8260C and project specific requirements.

Holding Time
Samples were analyzed within the prescribed holding time.

Instrument Performance and Calibration
Instrument tune check was performed prior to calibration. Result was within acceptance criteria. Multi-calibration points were generated to establish initial calibration (ICAL). ICAL was verified using secondary source (ICV). Continuing calibration (CCV) was carried out at a frequency required by the project. All calibration requirements were satisfied. Average response factors for all analytes were within method recommended response factors with the exception of Acetone and 2-Butanone. all target analytes were within 70-130% on all calibration points. Refer to calibration summary forms of ICAL, ICV and CCV for details.

Method Blank
Method blank was prepared and analyzed at the frequency required by the project. For this SDG, two(2) method blanks were analyzed. VOF3F17B and VOF3F18B were compliant to project requirement. Refer to sample result summary forms for details.

Lab Control Sample
Lab control sample was prepared and analyzed at a frequency required by the project. For this SDG, two(2) sets of LCS/LCD were analyzed. VOF3F17L/VOF3F17C and VOF3F18L/VOF3F18C were within LCS limits. Refer to LCS summary forms for details.

Matrix QC Sample
No matrix QC sample was provided on this SDG.

Surrogate
Surrogates were added on QC and field samples. All surrogate recoveries were within QC limits. Refer to sample result summary forms for details.

Sample Analysis
Samples were analyzed according to prescribed analytical procedures. Results were evaluated in accordance to project requirements. For this SDG, all quality control requirements were met.
